Nov 6-9, Nanjing, China

The 6th International Symposium on Heating, Ventilating and Air Conditioning

Proceedings
Volume I

Editors
Xiaosong Zhang
Hua Qian
Bin Zhou
Yonggao Yin

Organized by
SOUTHEAST UNIVERSITY

Co-organized by
Tsinghua University
THE UNIVERSITY OF HONG KONG
Jiangsu Refrigeration Association
# TABLE OF CONTENTS

## VOLUME 1: BUILDING AND HVAC

### KEYNOTE

- Heat Pumping and Reversible Air Conditioning; What we learned from the IEA-ECBCS annex 48 project  
  Philippe André, Jean Lebrun, operating agents of annex 48 ........................................... 1  
- Energy and Environment of Residential Buildings in China and Japan  
  Hiroshi Yoshino ........................................................................................................... 10

### TOPIC 1. SUSTAINABLE BUILDING

- Effect of Moisture Transfer on Hygrothermal Performance and Conduction Loads of Multilayer Wall of South China  
  Xingguo Guo, Youming Chen, Yongqiang Deng, Le Zhang, Yuhang Wang ....................... 15  
- Effect of Solar Radiation on Hygrothermal Performance of Multi-layer Wall of South China  
  Le Zhang, Youming Chen, Xingguo Guo ........................................................................... 22  
- The Application and Method of Optimum Insulation Thickness for Exterior Walls of Residential Buildings in Summer Hot and Winter Cold Zone of China  
  Zhi-jia Huang, Guo-zhi Zhang, Yang Zhang, Dong-fang Liu, Fu-ping Qian ................... 29  
- Benchmarking Energy Efficiency Standards for Residential Buildings in China  
  Hua Chen, WL Lee .......................................................................................................... 36  
- "Per Capita Building Energy Consumption Occupied Space (PCEOS)" for Evaluation of Building Energy Consumption  
  Xiang Yuan, Weiding Long, Xiaoqiang Jiang .................................................................... 44  
- A Green Energy Building on the Campus of Shanghai Jiao Tong University  
  Shuai Deng, Ruzhu Wang, Yanjun Dai, Xiaoqiang Zhai, Junru Shen .............................. 50  
- A Survey on Energy Consumption and Operation Management Status of Public Buildings in Changsha, China  
  Hui Zhou, Nianping Li, Ailin Lin, Ji Ni, Lijun Hu, Xiaqing Wei .................................... 58  
- Survey on Energy Consumption and Indoor Thermal Environment of University Building in Changsha, China  
  Peizhe Tian, Hui Zhou, Nianping Li, Qie Su ................................................................. 65  
- A Study of Safety Design Status of High Occupancy Public Building Areas in Changsha, China  
  Zhian Li, Nianping Li, Yinghua Zhao, Hui Zhou ........................................................... 72  
- The Impact of Shading on Building Daylighting and Energy Consumption  
  Zhengrong Li, Zhengtao Ai, Sheng Yu, Peng Li ........................................................... 77  
- The Heating System of a Beijing Courtyard—Restoration and Renovation Project of a Beijing Pilot Courtyard  
  Dan Zhu, Deying Li ........................................................................................................ 86  
- The Influence of the Width of Cantilever Plate of Bay Window on Energy Consumption in the Region of Hot Summer and Cold Winter  
  Weichuan Cheng, Jiapeng He, Rong Shi, Zhen Chen .................................................... 92  
- Studies on Seasonal Cooling Storage and Release of the Building Energy Piles System

---

-1-
Northern China in Winter
Li Huang, Yingxin Zhu, Qin Ouyang, Bin Cao .......................................................... 245

TOPIC 2. HVAC SYSTEM

Testing and Diagnosis on a Heating System in Beijing
Hongbing Chen, Deying Li, Ping Wei, Yaodong Lan .................................................. 252

A Simulation Study on the Capacity Control of a Direct-Expansion Variable-air-volume
Air Conditioning System
Wu Chen, Wensheng Yu, Shiming Deng ................................................................. 257

Comparison of Thermal Storage Air Conditioning for High-rise Buildings in Typical
Cities of Different Climatic Zones
Wei Cai, Xubo Yu, Danjun Wang, Linlin Gong, Jie Yang .......................................... 265

Thermal Sensation Based Humidity Control to Improve Thermal Comfort and Energy
Consumption in Non Hot-Dry Climate Zones
Jin W Moon, Jae D Chang ...................................................................................... 271

A Study on Fuzzy Control Technology of Constant Temperature and Constant
Humidity Air-Conditioning System
Ankang Kan, Houde Han, Jun Ji, Houmin Liu ....................................................... 278

Optimization Study on Cold Source of Central Air Conditioning in Residential
Buildings
Wei Cai, Lina Zhang, Zhaohui Wu, Xiaodong Wen .............................................. 286

A Study on Pipes Impedance Identification in a Realistic Heat-supply Network
Yongxin Liu, Pinghua Zou, Yonghu Kang .................................................................. 291

Study on the Running Mode of Evaporative-Cooling-Assisted Air-conditioning in
Mid-humidity Region
Xiang Huang, Chao Wang, Fang-cheng Xu, Zheng-hua Yan, Zhixiang Wu .............. 298

Performance Testing and Validation for the Medical and Science Building of Taipei
Veterans General Hospital
Haiti Loong, M J Wang ......................................................................................... 305

Application of Fuzzy Control Technology on the Marine Heat Exchanger Control
System
Houde Han, Ankang Kan, Lili Sha ............................................................................. 311

Investigation and Analysis of Energy Consumption for Public Buildings in Jiaxing
Xiaoyan Wu, Changzhi Yang, Feng Zhan ............................................................ 318

Neural Networks Application in Heating Networks Leakage Fault Diagnosis
Cuihong Lei, Pinghua Zou, Zhongyi He ................................................................. 324

Air Conditioning System of a Comprehensive Thermal Test Station of Refrigerated
Containers and Experimental Analysis
Jun Ji, Houde Han, Ankang Kan .............................................................................. 329

Screw Chillers Model Suitable for Variable Operating Condition
Xiaoqiang Jiang, Weiding Long ............................................................................. 336

A New Method of Cooling and Heating Load Calculation
Shu Zhang, Maoyu Zheng, Xiao Wang, Wenyong Zhang ...................................... 343

Energy Performance Evaluation of an Air-Conditioning System in a Large Scale Office
Building by Commissioning
Weijie Zhang, Jiuling Liu, Jieqing Jia ..................................................................... 351

Transmission Electricity Consumption of Heating System and Building Energy Saving
Zongyi Shao, Yifeng Wang, Ye Zhang ................................................................. 359

A Study on Heating Characteristics of The Combined Radiant Floor Heating & Cooling

- III -
System with Uneven Tubing
Qingqing Li, Chao Chen, Jie Lin, Ye Zhang, Zhuo Li, Pin Wu .......................... 366

A Quantitative Study on Factors Affecting Heat Consumption of Residential Buildings
Di Zhang, Rui Li ....................................................................................... 373

Influences of Green Star Rating Tool on HVAC System Design
Lisa Guan, Guangnan Chen ................................................................. 380

Selecting HVAC Systems for Typical UK Office Buildings
Ivan Korolija, Yi Zhang, Ljiljana Marjanovic-Halburd, Vic I Hanby .................. 388

Application Analysis of Self-Operated Dynamic Control Valve in a Heating System
Yu Shan, Rui Li ....................................................................................... 397

A Comparative Study on Energy Efficiency and Indoor Thermal Comfort of DOAS
Applied to Multi-zone Air-conditioning Systems
Gaoming Ge, Fu Xiao, Lizhi Zhang ....................................................... 405

Discussion on the Application of Variable-air-volume Air-conditioning System on Ships
Junjie Guo, Wu Chen, Zhenxiong Cai, Chaoyu Zheng ............................. 413

Prediction of the Energy Savings of a System Combining Air-conditioner’s Outdoor Unit with Hydroponic-cultivated Roof Plant
Fulin Wang, Harunori Yoshida, Michiko Yamashita .................................. 419

Effective Cooling Storage Capacity Characteristics of Supercooled Phase-Change Materials for Building Cooling Applications
Shuo Zhang, Jianlei Niu .......................................................................... 428

Energy-saving Analysis of a Hybrid Ground-coupled Heat Pump Project
Qin Xue, Jiufa Chen, Hongqi Zheng, Weilai Qiao, Erming An ...................... 436

Bjarne W. Olesen ................................................................................... 444

An Experimental Study on Operating Characteristics of DVM Air Conditioning System under Part Load Condition
Dongliang Zhang, Xu Zhang ................................................................. 452

Optimum Operation of Air-Cooled Chillers with Multiple Refrigeration Circuits
Jia Yang, K.T. Chan, Xiangsheng Wu ...................................................... 460

TOPIC 4. HVAC&R COMPONENT AND SYSTEM

Optimum Design and Experimental Study on a High Efficient Adsorber -I Design and Mathematical Models
Y.L. Liu, Z.Z. Xia, R.Z. Wang ................................................................. 468

Application of the Water Loop Variable Refrigerant Flow Air-Conditioning System in Large-Scale Buildings in Cold Climate
Tingting Sun, Long Ni, Yang Yao, Zuliang Ma ........................................ 475

Experimental Research on the Operational Characteristics of Free Cooling Box For Communication Base Station
Yanbing Gao, Anquan Liu, Jun Liu, Huanli Zhao ....................................... 483

Improvement of Hydrophilicity of Porous PVDF Membranes with LiCl Additives
Lixia Pei, Lizhi Zhang ........................................................................... 489

The Research on Ground Source Heat Pumps in China
Wei Yang, Jin Zhou, Guoqiang Zhang ..................................................... 496

Experimental Study of Cooling Performance of Gravity Air-conditioning
Cuimin Li, Jianing Zhao, Xiumu Fang .................................................... 504

Design Calculation of a Porous Ceramics Tube Type Dew Point Indirect Evaporative
Cooler
Xiuming Mao, Xiang Huang, Li Wen .................................................. 511

Numerical Simulation of an Air Source Heat Pump for Low Temperature Climates
Meng Huo, Shugang Wang, Xu Jin, Qiren Wu ........................................ 518

Adsorption Refrigeration and Indirect Evaporative Cooling—A Double-Effect Hybrid
Vehicular Air Conditioning System
Zhongbao Liu, Qingbo Ma, Shuang Yang, Qiang Zhang, Liu Ting .................. 525

Mathematical Modelling of Two-stage Evaporative Cooling System with A New Kind of
Directive Water Evaporative Cooling Air Conditioner
Zhongbao Liu, Shuang Yang, Qingbo Ma, Qiang Zhang, Liu Ting .................. 533

Performance of a U-vertical Direct-expansion Ground Heat Pump
Wei Yang, Guoqiang Zhang, Jin Zhou .................................................. 541

Thermodynamic Comparative Analysis of Heat Pump Cycles
Yingbai Xie, Yingfu Liu, Luxiang Zong, Ganglei Sun ................................ 546

Energy Consumption Analysis of a Liquid Desiccant Air-conditioning System for
Industrial Buildings
Yidan Tang, Xiaohua Liu .......................................................................... 551

Numerical Simulation of GWHP With Superheated Vapor Heat Recovery
Chao Zhang, Guanghui Zhou, Xiaodan Zhao ............................................ 559

A Study of Liquid Desiccant System Performance
Hesamoddin Salarian, Hessam Taherian, Hosain Ghadamian, Morteza Khalaji Assadi ...
............................................................................................................. 565

Experimental Study of the Performance of a Heat Recovery Heat-exchanger
Yucai Cong, Rui Li, Haitao Nie ................................................................. 573

Performance Characteristic Analysis of Double-U Tube Ground-Source Heat
Pump System in Winter
Yan Ren, Chao Chen, Yongfei Wang, Ye Zhang ........................................ 580

Experimental Study of the Dynamic Heat Storage Process by Jetting Water in
Direct-evaporation Ice-storage Air-conditioning
Xueqing Chen, Ying Chen, Yongkang Shi ................................................ 587

Experimental Study of the Characteristics of an Air Source Heat Pump with Enhanced
Vapor Injection
Hu Huang, Zhongbin Zhang, Jinzhu Gong, Dongxue Yuan, Qihe Li ................ 595

Performance of a Ground-Water Assistant Air-source Compound Heat Pump in
Refrigerating Conditions
Guanghui Zhou, Yin Liu, Shengjie Chen, Chao Zhang, Qixun Guo ................. 602

A Study of A Solar-driven Diffusion-absorption Refrigerator with an Adiabatic Spray
Absorber
Handong Wang ...................................................................................... 609

Energy Analysis of a Coupled Power and Refrigeration Cycle
Maneesh Dubey, SPS Rajput, P.K. Nag .................................................. 617

A Study On a New Auto-Cascade Refrigerating Cycle
Dan Cao, Guangming Chen, Qin Wang .................................................. 629

Study of CO₂ Heat Pump for Coupled Hot Water Supply and Room Heating System
Shengchun Liu, Zhili Sun, Yitai Ma, Qiuju Liu ......................................... 636

Development of a High Efficient Ground Source Heat Pump
Luís Coelho, Rita Cerdeira, João Garcia, Konstantin Karytsas, Dimitrios Mendrinos,
Burkhard Sanmerand Marcel Abry .......................................................... 644

Discussion on Improvement of Traditional Dehumidifying Technology
Li Wang, Zhiwei Lian ............................................................................. 652
Application Analysis of Air-source Heat Pump Unit
Zongyi Shao, Yufeng Wang, Rui Fang ................................................................. 661

A New Water Source Heat Pump Water Heater and Chiller
Ying You .............................................................................................................. 665

Experimental Study of the Compressor in a R410a Heat Pump Water Heater System
Fengkun Wang, Xiaowei Fan, Zhiwei Lian, Fang Wang ........................................ 671

Performance Study on a Heat Pump Driven Three-stage Liquid Desiccant Deep
Dehumidification Processor
Haiqiang Zhang, Xiaohua Liu, Yi Jiang ............................................................... 679

A Study of the Ground Source Heat Pump System in Shanghai Minhang Archives in the
Heating Mode
Xin Yu, Ruzhu Wang, Xiaoqiang Zhai ................................................................. 687

Air Interaction around Outdoor Air-cooled Condensers
Jian Zhang, Shugang Wang, and Tengfei (Tim) Zhang ........................................ 694

A Study of the Mechanical Draft Heating/Cooling Tower Heat Pump System
Yi Luo, Rongsheng Ma, Xingfeng Ding, Zhilin Wang ........................................... 702

Performance Simulation of Condensing Heat Exchanger in Different Work Conditions
Jing Wang, Weixing Yuan, Xiugan Yuan .............................................................. 708

Three-dimensional temperature field Simulation of Ground heat exchangers with
Groundwater Flow
Hui Long, Yuejin Yu, Zhouquan Feng ............................................................... 716

Experiment Study on heat dissipation Performance of Heating-only Fan Coil
Xiaozhou Wu, Jianing Zhao ................................................................................ 724

Recent Research and Developments on the System of Independent Heat and Humidity
Control Air Conditioning System
Shikui Lu, Xiaosong Zhang .................................................................................. 732

Optimum Design and Experimental Study on a High Efficient Adsorber-II Optimum
Design and Performance Analysis
Yanling Liu, Zaizhong Xia, Ruzhu Wang ............................................................. 742

Optimization Design of Waste Heat Driven Two-stage LiBr-H2O Absorption
Refrigerator with Heat Pipe
Wenbin Wu, Yongchang Zhu, Sumin Jin ......................................................... 749

Parametric Study on an Air-heated Desiccant Solution Regenerator
Yonggao Yin, Xiaosong Zhang .......................................................................... 756

Performance Simulation and Analysis of New Solar Assisted Air-Source Heat Pump
Heating System
Caihua Liang, Xiaosong Zhang, Xiuwei Li, Xia Zhu ........................................... 766

Characteristic and Performance simulation of the heat pump part of a new solar
assisted air-source heat pump system heating system
Caihua Liang, Xiaosong Zhang, Xia Zhu, Xiuwei Li ............................................. 774

Design and study of a novel system for solid desiccant dehumidification
Ming Shan, Yuanzhe Li, Xudong Yang ............................................................ 782
