The ScrumMaster Study Guide

James Schiel
# Contents

Preface ................................................................. xiii  
Acknowledgments .................................................. xv  
About the Author................................................... xvii  

**Chapter 1**  Introduction ........................................... 1  

**SECTION I  The Practical Guide to Scrum**  

**Chapter 2**  An Agile Product Development Life Cycle .............. 7  

**Chapter 3**  Release Planning and "Iteration Zero" ................. 9  
  Introduction ....................................................... 9  
  Product Backlog Preparation .................................. 11  
  Setting the Sprint Schedule ................................... 15  
  Staffing of Scrum Teams ....................................... 16  
  Training of Scrum Teams ....................................... 18  
  Review/Revise DONEness Definition ............................ 19  
  Creation (or Updating) of the Architecture Definition ....... 20  
  Grooming for the First Sprint .................................. 21  
  Reference .......................................................... 21  
  Endnotes .......................................................... 22  

**Chapter 4**  Backlog Grooming ...................................... 23  
  Introduction ....................................................... 23  
  Preparing for the Backlog Grooming Workshop ................. 24  
  Setting Up the Backlog Grooming Workshop .................... 25  
  Facilitating the Backlog Grooming Workshop .................. 26  
  Wrapping Up the Backlog Grooming Workshop ................. 27
Chapter 5  The Sprint Planning Meeting ............................................. 29
  Introduction .................................................................................. 29
  Preparing for the Sprint Planning Meeting ................................. 29
  Setting Up the Sprint Planning Meeting ................................. 30
    For a Single-Part Planning Meeting .................................... 30
    For Multipart Planning Meetings ........................................ 31
  Facilitating the Sprint Planning Meeting .................................. 32
    For Single-Part Planning Meetings (“Commitment-Based Planning”) ............................................. 33
    For Two-Part Planning Meetings (“Velocity-Based Planning”) .................................................. 37
    For Two-Part Noncolocated Planning Meetings ................. 38
  Wrapping Up the Sprint Planning Meeting ................................ 40
  Endnotes .................................................................................. 40

Chapter 6  The Daily Scrum Meeting ............................................. 41
  Introduction .................................................................................. 41
  Preparing for the Daily Scrum .................................................... 41
  The Standard Daily Scrum (All Team Members in One Location) ........................................................................ 43
  The Tokenized Daily Scrum (All Team Members in One Location) ........................................................................ 44
  The Slightly Remote Daily Scrum ................................................. 45
  The Completely Remote Daily Scrum ........................................ 46
  Endnotes .................................................................................. 47

Chapter 7  The Sprint Review Meeting ............................................. 49
  Introduction .................................................................................. 49
  Preparing the Sprint Review Meeting ....................................... 49
  Setting Up the Sprint Review Meeting .................................... 50
  Facilitating the Sprint Review Meeting .................................. 51
  Wrapping Up the Sprint Review Meeting ............................... 53
  Endnotes .................................................................................. 54

Chapter 8  The Sprint Retrospective Meeting ................................. 55
  Introduction .................................................................................. 55
Preparing for the Sprint Retrospective Meeting .......... 55
Setting Up the Sprint Retrospective Meeting .......... 57
Facilitating the Sprint Retrospective Meeting .......... 58
Wrapping Up the Sprint Retrospective Meeting ....... 60
Endnote ........................................................................ 60

Chapter 9 Creating Backlog Agreements .................. 61
Endnote ........................................................................ 64

Chapter 10 Practical Advice to End the Practical Guide .... 65

SECTION II Questions Frequently Asked in CSM Training

Chapter 11 About Agile Development ..................... 69
Introduction ................................................................ 69
Do Agile Projects Have End Dates? .......................... 70
What if My Customers Do Not Want Early and Frequent Delivery? ....................................... 72
Can You Do Agile Development Without Scrum Teams? .... 74
What is the Difference Between Agile and Scrum? ......... 75
What is the Difference Between a User Story and a Use Case? ................................................ 76
Is Time for Research Part of the Iteration? ................ 78
What Happens if We Discover Something We Should Have Done Differently? ....................... 79
How Do I Communicate Expectations beyond the Product Owner? ............................................ 81
References .................................................................. 82
Endnotes ....................................................................... 82

Chapter 12 About Scrum ............................................ 83
Introduction ................................................................ 83
Is Scrum of Value with Pure Infrastructure or Commercial, Off-the-Shelf (COTS) Software Projects? ...... 84
When is Scrum Not a Good Methodology to Use? ..........87
Does the Product Backlog Contain All Requirements/Stories? ..................................................................................89
Does Using Scrum Mean There Is No Reason for Management? ....................................................................................89
What Are the Differences Between Scrum and XP? ..........92
How Do You Handle Multiple-Team Coordination in Scrum?.........................................................................................94
Scrum of Scrums ........................................................................94
Coordinating Scrum-of-Scrums (CSoS) .................................95
How Does a Scrum Team Self-Organize with Regard to Assigning Tasks? .........................................................................96
Does Swarming on Small Stories Increase or Decrease Productivity? ...........................................................................97
Scrummasters: Technical Background or Project Management Background? ................................................................. 100
Scrum Means Less Documentation—What Should I Do with Existing Documentation? .........................................................102
Reference ..............................................................................106
Endnote ..................................................................................106

Chapter 13 Using Scrum ..................................................................... 107

Introduction .............................................................................107
How Many Scrum Teams Can a Product Owner Have?....107
Scheduling ...............................................................................108
Backlog Management.............................................................108
Team Interactions..................................................................109
What Do You Do When the Product Owner Will Not Engage? ....................................................................................110
What Tools Assist in a Scrum Project? ........................................111
Tooling and Tools ....................................................................111
A Cautionary Word about Backlog Management Tools .........................................................................................115
Does Scrum Work by Itself? .....................................................116
What is Sprint Zero, and How Do I Use It? .........................116
Within a Project, Can Sprint Lengths Be Different? ..........118
Can I Use the V Model in My Sprints? .................................120
How Do You Keep Daily Scrums Working after Several Sprints? ......................................................... 121
How Do I Keep Team Members Engaged during Sprint Planning? ......................................................... 127
What Should I Do if My Team Is Highly Specialized? .... 128
Can New Items Be Introduced during the Sprint? .......... 131
How Do I Handle Stories That Are Started but Cannot Be Finished in a Sprint? ......................................... 133
How Should I Handle Urgent Requests in the Middle of a Sprint? ....................................................... 136
How Should I Handle a Sick or Otherwise Absent Team Member? ....................................................... 138
How Can Scrum Be Applied in a Test Team? ................. 140
How Does System Testing Fit in Scrum? ......................... 141
Reference .................................................................. 144
Endnotes .................................................................. 144

Chapter 14 Agile Product Management ........................................ 145

What is the Release Backlog? ........................................ 145
How Do I Determine Project Budget from a Product Backlog? ................................................................. 145
Velocity-Based Commitments ........................................ 148
T-Shirt Sizing ................................................................ 149
How Do You Balance Customer Requirements against Technical Requirements? .......................................... 150
Approach 1: Tax the Functionality ................................. 153
Approach 2: Build Infrastructure into the Backlog ........ 153
How Do You Forecast Completion in a Backlog Filled with Epics? ........................................................... 156
How Can I Incorporate User Interface Style Guides? .... 160
How Do I Manage Risk in the Agile Project? ................. 161
What About the Project Manager? ............................... 171
How Do I Start a Product From Scratch? ................. 172
Step 1: Create the Product Vision ............................... 173
Step 2: Build the Initial Product Backlog .................... 174
Step 3: Create the Initial Architectural Design ............. 176
Step 4: Groom the Product Backlog ............................ 177
Step 5: Moving Forward ........................................... 177
