Contents

Preface xiii
List of Symbols xix

Chapter 1 Diffusive Fluxes and Material Properties 1
1.1 Introduction 1
1.2 Basic Constitutive Equations 2
1.3 Diffusivities for Energy, Species, and Momentum 7
1.4 Magnitudes of Transport Coefficients 8
1.5 Molecular Interpretation of Transport Coefficients 13
1.6 Limitations on Length and Time Scales 19
References 22
Problems 23

Chapter 2 Fundamentals of Heat and Mass Transfer 26
2.1 Introduction 26
2.2 General Forms of Conservation Equations 27
2.3 Conservation of Mass 34
2.4 Conservation of Energy: Thermal Effects 36
2.5 Heat Transfer at Interfaces 38
2.6 Conservation of Chemical Species 41
2.7 Mass Transfer at Interfaces 43
2.8 Molecular View of Species Conservation 44
References 48
Problems 48

Chapter 3 Formulation and Approximation 53
3.1 Introduction 53
3.2 One-Dimensional Examples 54
3.3 Order-of-Magnitude Estimation and Scaling 69
3.4 "Dimensionality" in Modeling 77
3.5 Time Scales in Modeling 87
References 97
Problems 98

Chapter 4 Solution Methods Based on Scaling Concepts 113
4.1 Introduction 113
4.2 Similarity Method 114
4.3 Regular Perturbation Analysis 120
Chapter 9 Laminar Flow at High Reynolds Number 361
  9.1 Introduction 361
  9.2 General Features of High Reynolds Number Flow 362
  9.3 Irrotational Flow 371
  9.4 Boundary Layers at Solid Surfaces 378
  9.5 Internal Boundary Layers 387
      References 393
      Problems 394

Chapter 10 Forced-Convection Heat and Mass Transfer in Confined Laminar Flows 401
  10.1 Introduction 401
  10.2 Péclet Number 402
  10.3 Nusselt and Sherwood Numbers 406
  10.4 Entrance Region 411
  10.5 Fully Developed Region 415
  10.6 Conservation of Energy: Mechanical Effects 423
  10.7 Taylor Dispersion 427
      References 433
      Problems 434

Chapter 11 Forced-Convection Heat and Mass Transfer in Unconfined Laminar Flows 440
  11.1 Introduction 440
  11.2 Heat and Mass Transfer in Creeping Flow 441
  11.3 Heat and Mass Transfer in Laminar Boundary Layers 446
  11.4 Scaling Laws for Nusselt and Sherwood Numbers 451
      References 457
      Problems 458

Chapter 12 Transport in Buoyancy-Driven Flow 463
  12.1 Introduction 463
  12.2 Buoyancy and the Boussinesq Approximation 464
  12.3 Confined Flows 466
  12.4 Dimensional Analysis and Boundary-Layer Equations 474
  12.5 Unconfined Flows 478
      References 485
      Problems 486

Chapter 13 Transport in Turbulent Flow 491
  13.1 Introduction 491
  13.2 Basic Features of Turbulence 491
  13.3 Time-Smoothed Equations 499
  13.4 Eddy Diffusivity Models 505
13.5 Other Approaches for Turbulent-Flow Calculations 518
   References 524
   Problems 525

Chapter 14 Simultaneous Energy and Mass Transfer and Multicomponent Systems 529
14.1 Introduction 529
14.2 Conservation of Energy: Multicomponent Systems 530
14.3 Simultaneous Heat and Mass Transfer 532
14.4 Introduction to Coupled Fluxes 545
14.5 Stefan–Maxwell Equations 550
14.6 Generalized Diffusion in Dilute Mixtures 553
14.7 Generalized Stefan–Maxwell Equations 557
   References 563
   Problems 564

Chapter 15 Transport in Electrolyte Solutions 573
15.1 Introduction 573
15.2 Formulation of Macroscopic Problems 574
15.3 Macroscopic Examples 580
15.4 Equilibrium Double Layers 585
15.5 Electrokinetic Phenomena 592
   References 601
   Problems 602

Appendix A Vectors and Tensors 609
A.1 Introduction 609
A.2 Representation of Vectors and Tensors 609
A.3 Vector and Tensor Products 612
A.4 Vector-Differential Operators 617
A.5 Integral Transformations 620
A.6 Position Vectors 623
A.7 Orthogonal Curvilinear Coordinates 625
A.8 Surface Geometry 634
   References 638

Appendix B Ordinary Differential Equations and Special Functions 639
B.1 Introduction 639
B.2 First-Order Equations 640
B.3 Equations with Constant Coefficients 641
B.4 Bessel and Spherical Bessel Equations 642
B.5 Other Equations with Variable Coefficients 647
   References 650

Index 651
