Session 1: Finite Model Theory
Querying the Guarded Fragment ................................................................. 1
   Vince Bárany, Georg Gottlob, and Martin Otto
Highly Acyclic Groups, Hypergraph Covers and the Guarded Fragment .................. 11
   Martin Otto

Session 2: Type theory
Equality Is Typable in Semi-full Pure Type Systems ........................................ 21
   Vincent Siles and Hugo Herbelin
Strong Normalization for System F by HOAS on Top of FOAS .............................. 31
   Andrei Popescu, Elsa L. Gunter, and Christopher J. Osborn
Game Semantics for a Polymorphic Programming Language ................................. 41
   J. Laird
An Intuitionistic Logic that Proves Markov's Principle ...................................... 50
   Hugo Herbelin

Session 3: Tribute to Amir and Robin
Amir Pnueli: A Gentle Giant, Lord of the Phi's and the Psi's .............................. 57
   David Harel
Robin Milner, a Craftsman of Tools for the Mind ............................................. 58
   Gordon D. Plotkin

Session 4: Logic and Automata
Alternating Timed Automata over Bounded Time .............................................. 60
   Mark Jenkins, Joël Ouaknine, Alexander Rabinovich, and James Worrell
Regular Cost Functions over Finite Trees ..................................................... 70
   Thomas Colcombet and Christof Löding
Parikh Images of Grammars: Complexity and Applications .................................................. 80
   Eryk Kopczyński and Anthony Widjaja To

Session 5: Complexity of CSP
On the Scope of the Universal-Algebraic Approach to Constraint Satisfaction ....................... 90
   Manuel Bodirsky, Martin Hils, and Barnaby Martin
New Conditions for Taylor Varieties and CSP ........................................................................ 100
   Libor Barto and Marcin Kozik

Session 6: Invited Lecture
The Fine Print of Security ........................................................................................................ 110
   Martin Abadi

Session 7: Semantics
Modular Construction of Fixed Point Combinators and Clocked Böhm Trees ............................ 111
   Jörg Endrullis, Dimitri Hendriks, and Jan Willem Klop
Recursion Schemes and Logical Reflection .................................................................................. 120
   Christopher H. Broadbent, Arnaud Carayol, C.-H. Luke Ong, and Olivier Serre
Undecidability of Propositional Separation Logic and Its Neighbours .................................... 130
   James Brotherston and Max Kanovich
The Undecidability of Boolean BI through Phase Semantics ................................................... 140
   Dominique Larchey-Wendling and Didier Galmiche
Segal Condition Meets Computational Effects ............................................................................ 150
   Paul-André Melliès

Session 8: Finite Model Theory
The Isomorphism Problem on Classes of Automatic Structures ................................................. 160
   Dietrich Kuske, Jiamou Liu, and Markus Lohrey
On the Strictness of the First-Order Quantifier Structure Hierarchy over Finite Structures ........ 170
   Yuguo He

Session 9: Finite Model Theory
Fixed-Point Definability and Polynomial Time on Graphs with Excluded Minors ....................... 179
   Martin Grohe
Lower Bounds for the Complexity of Monadic Second-Order Logic ......................................... 189
   Stephan Kreutzer and Siamak Tazari
Capturing Polynomial Time on Interval Graphs ........................................................................... 199
   Bastian Laubner
Session 10: Logics
A Generic Operational Metatheory for Algebraic Effects ................................................................. 209
   Patricia Johann, Alex Simpson, and Janis Voigtländer
Polarity and the Logic of Delimited Continuations ........................................................................... 219
   Noam Zeilberger

Session 11: Keynote Lecture
Datalog+: A Family of Logical Knowledge Representation and Query Languages for New Applications ................................................................. 228
   Andrea Cali, Georg Gottlob, Thomas Lukasiewicz, Bruno Marnette, and Andreas Pieris

Session 12: Logic and Automata
An Extension of Data Automata that Captures XPath ........................................................................... 243
   Mikolaj Bojanczyk and Slawomir Lasota
Deciding Definability in FO(<=h, <v) on Trees ...................................................................................... 253
   Thomas Place and Luc Segoufin
The Emptiness Problem for Tree Automata with Global Constraints ............................................... 263
   Luis Barguñó, Carles Creus, Guillem Godoy, Florent Jacquemard, and Camille Vacher
Addition-Invariant FO and Regularity ................................................................................................. 273
   Nicole Schweikardt and Luc Segoufin

Session 13: Keynote Lecture
Theorem Proving for Verification: The Early Days ................................................................................ 283
   J Strother Moore

Session 14: Logics
Breaking Paths in Atomic Flows for Classical Logic ............................................................................ 284
   Alessio Guglielmi, Tom Gundersen, and Lutz Straßburger
Infinitary Completeness in Ludics ........................................................................................................ 294
   Michele Basaldella and Kazushige Terui
On Strong Maximality of Paraconsistent Finite-Valued Logics ....................................................... 304
   Amon Avron, Ofer Arieli, and Anna Zamansky

Session 16: Invited Lecture
Probabilistic Information Flow ........................................................................................................... 314
   Mário S. Alvim, Miguel E. Andrés, and Catuscia Palamidessi
Session 17: Process Calculi

Weak Equivalences in Psi-Calculi
Magnus Johansson, Jesper Bengtson, Joachim Parrow, and Björn Victor

A Calculus of Contracting Processes
Massimo Bartoletti and Roberto Zunino

On Probabilistic Automata in Continuous Time
Christian Eisentraut, Holger Hermanns, and Lijun Zhang

ω-QRB-Domains and the Probabilistic Powerdomain
Jean Goubault-Larrecq

Session 18: Invited Lecture

Abstracting the Differential Semantics of Rule-Based Models: Exact and Automated Model Reduction
Vincent Danos, Jérôme Feret, Walter Fontana, Russell Harmer, and Jean Krivine

Session 19: Concurrency

The Expressive Power of Synchronizations
Cosimo Laneve and Antonio Vitale

On the Expressivity of Symmetry in Event Structures
Sam Staton and Glynn Winskel

A Finiteness Structure on Resource Terms
Thomas Ehrhard

Session 20: Coalgebras

Coalgebras, Chu Spaces, and Representations of Physical Systems
Samson Abramsky

A Sound and Complete Calculus for Finite Stream Circuits
Stefan Milius
