Web Services & SOA: Principles and Technology

Second Edition

Michael P. Papazoglou

European Research Institute in Service Science, Tilburg University, The Netherlands
Part II  Enabling infrastructure  57

Chapter 2: Distributed computing infrastructure  59

2.1 Distributed computing and Internet protocols  60
   2.1.1 Internet protocols  61
      2.1.1.1 The Open Systems Interconnection reference model  61
      2.1.1.2 The TCP/IP network protocol  63
   2.2 Middleware  66
   2.3 The client-server model  67
   2.4 Inter-process communication  69
      2.4.1 Messaging  69
      2.4.2 Message destinations and sockets  70
      2.4.3 Forms of message communication  71
   2.5 Synchronous forms of middleware  72
      2.5.1 Remote procedure calls (RPC)  72
      2.5.2 Remote method invocation  74
   2.6 Asynchronous forms of middleware  75
      2.6.1 Store and forward messaging  75
      2.6.2 Publish/subscribe messaging  77
      2.6.3 Event driven processing mechanisms  79
   2.7 Request/reply messaging  80
   2.8 Message oriented middleware  81
      2.8.1 Integration brokers  83
      2.8.2 The Java Message Service (JMS)  85
   2.9 Transaction oriented middleware  86
   2.10 Enterprise application and e-Business integration  87
      2.10.1 Enterprise application integration  87
      2.10.2 e-Business integration  88
   2.11 Summary of learning objectives  90
      Review questions  91
      Exercises  91

Chapter 3: Brief overview of XML  93

3.1 XML document structure  94
   3.1.1 XML declaration  95
   3.1.2 XML elements  95
   3.1.3 XML attributes  96
### 3.2 XML namespaces 97
3.3 Defining structure in XML documents 100
  3.3.1 The XML Schema Definition Language 100
  3.3.2 The XML schema document 101
3.3.3 Schema type definitions and declarations 103
  3.3.3.1 Element declarations 105
  3.3.3.2 Attribute declarations 105
3.3.4 Simple types 106
3.3.5 Complex types 106
3.4 Reuse of XML schemas 107
  3.4.1 Deriving complex types 107
    3.4.1.1 Complex type extensions 107
    3.4.1.2 Complex type restrictions 108
    3.4.1.3 Polymorphism 109
  3.4.2 Importing and including schemas 111
    3.4.2.1 Including schemas 111
    3.4.2.2 Importing schemas 112
3.5 Document navigation and transformation 116
  3.5.1 The XML Path Language 116
  3.5.2 Using XSLT to transform documents 119
3.6 Summary of learning objectives 120
Review questions 120
Exercises 121

### Part III  Core functionality and standards 123

**Chapter 4: SOAP: Simple Object Access Protocol** 125

  4.1 Inter-application communication and wire protocols 126
    4.1.1 SOAP as a wire representation 127
  4.2 SOAP as a messaging protocol 127
  4.3 Structure of a SOAP message 131
    4.3.1 SOAP envelope 131
    4.3.2 SOAP header 134
      4.3.2.1 SOAP intermediaries 136
    4.3.3 SOAP body 139
  4.4 SOAP communication model 139
    4.4.1 RPC style Web services 139
    4.4.2 Document (message) style Web services 142
  4.5 Error handling in SOAP 144
Chapter 5: Describing Web services

5.1 Why is a service description needed? 150
5.2 WSDL: Web Services Description Language 151
   5.2.1 The service interface and implementation 151
   5.2.2 WSDL definition element 154
   5.2.3 WSDL abstract service description 156
      5.2.3.1 The types element 157
      5.2.3.2 The message element 158
      5.2.3.3 The operation and portType elements 160
      5.2.3.4 Example of an abstract service definition in WSDL 161
   5.2.4 WSDL concrete service description – implementation 162
      5.2.4.1 The binding element 163
      5.2.4.2 The service and port elements 166
      5.2.4.3 Example of a concrete service definition in WSDL 168
   5.2.5 Message exchange patterns 170
      5.2.5.1 One-way 172
      5.2.5.2 Request/response 172
      5.2.5.3 Notification 173
      5.2.5.4 Solicit/response 173
5.3 Non-functional service descriptions 174
5.4 WSDL 1.1 versus WSDL 2.0 174
5.5 Summary of learning objectives 175
   Review questions 175
   Exercises 176

Chapter 6: Registering and discovering services 177

6.1 The role of service registries 178
6.2 Service discovery 179
6.3 Universal Description, Discovery and Integration (UDDI) 180
   6.3.1 The UDDI data structures 182
      6.3.1.1 Service provider information 185
6.3.1.2 Representing business service information 188  
6.3.1.3 Representing technical service information 190  
6.3.1.4 Best practices for storing technical service information 195  
6.3.1.5 The publisher assertion structure 196  
6.3.2 Mapping WSDL to UDDI 197  
6.3.2.1 Publishing service interfaces and service bindings 197  
6.3.2.2 Publishing service implementations 200  
6.3.2.3 Summary of the WSDL to UDDI mapping model 203  
6.3.3 The UDDI API 204  
6.3.3.1 Publishing API 205  
6.3.3.2 Inquiry API 206  
6.3.4 Querying the UDDI model 207  
6.3.4.1 Retrieving information about businesses 207  
6.3.4.2 Retrieving technical service information 209  
6.3.5 Service registry usage model and deployment variants 210  
6.4 Summary of learning objectives 212  
Review questions 213  
Exercises 213  

**Part IV  Event notification and Service Oriented Architectures**  

**Chapter 7: Service addressing and notification**  

7.1 Referencing and addressing Web services 218  
7.1.1 WS-Addressing 218  
7.1.1.1 Endpoint references 219  
7.1.1.2 Message addressing properties 220  
7.2 Web Services Notification 223  
7.2.1 Peer-to-peer notification 224  
7.2.2 WS-BaseNotification interfaces 227  
7.2.2.1 The notification consumer interface 227  
7.2.2.2 The notification producer interface 229  
7.2.2.3 The subscription manager interface 229  

---  

**Contents**

6.3.1.2 Representing business service information 188  
6.3.1.3 Representing technical service information 190  
6.3.1.4 Best practices for storing technical service information 195  
6.3.1.5 The publisher assertion structure 196  
6.3.2 Mapping WSDL to UDDI 197  
6.3.2.1 Publishing service interfaces and service bindings 197  
6.3.2.2 Publishing service implementations 200  
6.3.2.3 Summary of the WSDL to UDDI mapping model 203  
6.3.3 The UDDI API 204  
6.3.3.1 Publishing API 205  
6.3.3.2 Inquiry API 206  
6.3.4 Querying the UDDI model 207  
6.3.4.1 Retrieving information about businesses 207  
6.3.4.2 Retrieving technical service information 209  
6.3.5 Service registry usage model and deployment variants 210  
6.4 Summary of learning objectives 212  
Review questions 213  
Exercises 213  

**Part IV  Event notification and Service Oriented Architectures**  

**Chapter 7: Service addressing and notification**  

7.1 Referencing and addressing Web services 218  
7.1.1 WS-Addressing 218  
7.1.1.1 Endpoint references 219  
7.1.1.2 Message addressing properties 220  
7.2 Web Services Notification 223  
7.2.1 Peer-to-peer notification 224  
7.2.2 WS-BaseNotification interfaces 227  
7.2.2.1 The notification consumer interface 227  
7.2.2.2 The notification producer interface 229  
7.2.2.3 The subscription manager interface 229
### Part V  Service composition and transactions  

#### Chapter 9: Service composition and business processes

Chapter 10: Service transactions

10.1 What is a transaction?
10.1.1 Properties of transactions
10.1.2 Concurrency control mechanisms
10.1.2.1 Transaction serialisability
10.1.2.2 Two-phase locking
10.1.2.3 Transaction isolation

10.2 Distributed transactions
10.2.1 Distributed transaction architectures
10.2.2 Two-phase commit protocol
10.2.2.1 Phase I: preparation
10.2.2.2 Phase II: commitment/abortion

10.3 Nested transactions
10.3.1 The closed nested transaction model
10.3.1.1 The two-phase commit protocol for nested transactions
10.3.1.2 Concurrency control
10.3.2 The open nested transaction model
10.3.2.1 Transactional workflows
10.3.2.2 Recovery mechanisms

10.4 Web service transactions
10.4.1 Characteristics of Web service transactions
10.4.2 Operational characteristics of Web service transactions
10.4.2.1 Atomic actions
10.4.2.2 Long duration transactions
10.4.3 Consensus groups and interposition
10.4.4 States of Web service transactions

10.5 Web service coordination
10.5.1 The WS-Coordination model
10.5.2 Typical message exchange between two applications 393
10.5.3 Coordination context 394
10.5.4 Activation service 395
10.5.5 Registration service 397

10.6 Web service transaction types 400
10.6.1 Atomic transaction 400
  10.6.1.1 Completion protocol 402
  10.6.1.2 Durable Two-Phase Commit (2PC) protocol 402
  10.6.1.3 Volatile Two-Phase Commit (2PC) protocol 403
10.6.2 Business activity 405
  10.6.2.1 Business activity characteristics 406
  10.6.2.2 Business agreement with participant completion protocol 407
  10.6.2.3 Business agreement with coordinator completion protocol 408

10.7 Summary of learning objectives 409
Review questions 410
Exercises 411

Part VI SOA security and policies 413

Chapter 11: Securing SOA and Web services 415

11.1 SOA and Web service security considerations 416
  11.1.1 Security threats for Web services 417
  11.1.2 Security countermeasures 420

11.2 Network level security mechanisms 420
  11.2.1 Firewalls 420
    11.2.1.1 Firewall architectures 421
  11.2.2 Intrusion detection systems and vulnerability assessment 425
  11.2.3 Securing network communications 426
    11.2.3.1 Symmetric encryption 427
    11.2.3.2 Asymmetric encryption 428
    11.2.3.3 Digital certificates and signatures 430

11.3 Application level security mechanisms 433
  11.3.1 Authentication 433
    11.3.1.1 Protection domains 434
    11.3.1.2 Web resource protection 434
    11.3.1.3 Privacy 435
  11.3.2 Authorisation 435
  11.3.3 Integrity and confidentiality 437

Chapter 12: Service policies

12.1 What are policies and why are they needed?
  12.1.1 Characteristics of service policies
  12.1.2 Characteristics of a policy language
12.2 Types of policy
  12.2.1 Versioning policies
  12.2.2 QoS policies
  12.2.3 Security policies
12.3 Service policy support standards
12.4 WS-Policy framework
  12.4.1 Overview of WS-Policy
    12.4.1.1 Policy expressions
  12.4.2 Policy operators
    12.4.2.1 Equivalence property
    12.4.2.2 Associative property
    12.4.2.3 Commutative property
    12.4.2.4 Distributive property
    12.4.2.5 Idempotent rule
  12.4.3 Combining and comparing policies
    12.4.3.1 Merging policies
    12.4.3.2 Intersecting policies
  12.4.4 Policy attachments
    12.4.4.1 WSDL policy attachments
    12.4.4.2 External policy attachments
12.5 Summary of learning objectives

Review questions
Exercises

Part VII Service semantics and business protocols

Chapter 13: Semantics and Web services

13.1 The semantic interoperability problem
13.2 The role of metadata
  13.2.1 Organisation of metadata
  13.2.2 Types of metadata
  13.2.3 Metadata and ontologies
13.3 Service metadata
13.4 Resource Description Framework
  13.4.1 The RDF data model
Chapter 14: Business protocols and standards

14.1 The supply chain business ecosystem
14.2 Semantic problems at the business process level
14.3 Business standards and protocols
   14.3.1 Electronic Data Interchange
   14.3.2 Horizontal business standards: Electronic Business XML
      14.3.2.1 The ebXML reference architecture
      14.3.2.2 ebXML functional phases
      14.3.2.3 ebXML and Web services
   14.3.3 Vertical business standards: RosettaNet
      14.3.3.1 The RosettaNet business architecture
      14.3.3.2 The RosettaNet Implementation Framework
      14.3.3.3 RosettaNet and Web services
14.4 Vertical industry standards
   14.4.1 XML standards for the aviation industry
   14.4.2 XML standards for the automotive industry
   14.4.3 XML standards for the travel industry
   14.4.4 XML standards for the insurance industry
14.5 Summary of learning objectives

Exercises

Part VIII   SOA modelling, design and development

Chapter 15: SOA based application modelling

15.1 The art of modelling
15.2 Business process modelling methodologies
   15.2.1 The UN/CEFACT modelling methodology
      15.2.1.1 The UMM meta-model
Chapter 16: SOA development lifecycle 626

16.1 Unravelling the nature of SOA based applications 627
16.2 Rationale for SOA based application development 629
16.3 Typical SOA development pitfalls 630
16.4 Software development lifecycle 631
  16.4.1 Software development models 632
    16.4.1.1 Waterfall model 632
    16.4.1.2 Spiral model 632
    16.4.1.3 Iterative methodologies 632
  16.4.2 Object oriented and component based development 633
    16.4.2.1 Object oriented development 633
    16.4.2.2 Component based development 634
  16.4.3 Process modelling methodologies 635
16.5 Elements of SOA based applications 635
  16.5.1 Data-centric versus process-centric SOA applications 637
  16.5.2 SOA operational control and visibility 637
  16.5.3 SOA maturity and governance 638
16.6 Best practices for developing SOA based applications 639
16.7 Reference model for SOA development 641
  16.7.1 Layers in the SOA reference model 641
    16.7.1.1 Navigating the reference model 642
16.7.1.2 The logical view of the SOA reference model 643
16.7.1.3 The physical view of the SOA reference model 644
16.7.2 QoS considerations in the SOA reference model 646
16.8 Guiding principles of SOA application development 647
  16.8.1 Service coupling 647
  16.8.2 Service cohesion 649
  16.8.3 Service granularity 651
16.9 Overview of SOA development lifecycle 654
16.10 The SOA planning phase 657
16.11 The SOA analysis phase 658
  16.11.1 As-is process model analysis 660
  16.11.2 Atomic service and business process identification 661
  16.11.3 Business process scoping 663
  16.11.4 SOA gap analysis 664
  16.11.5 Process realisation analysis 664
16.12 The SOA design (specification) phase 668
  16.12.1 Key service design considerations 669
    16.12.1.1 Designing for service granularity 670
    16.12.1.2 Designing for loose coupling and high cohesion 670
    16.12.1.3 Designing for service reusability 671
    16.12.1.4 Designing for service composability 671
  16.12.2 Specifying atomic services 671
    16.12.2.1 Structural and behavioural service specification 672
    16.12.2.2 Specifying the service interaction style 674
  16.12.3 Specifying business processes 676
    16.12.3.1 Specifying the business process structure 677
    16.12.3.2 Specifying roles and responsibilities 679
  16.12.4 Specifying service policies and QoS requirements in an SOA 682
    16.12.4.1 Business level SOA QoS requirements 682
    16.12.4.2 Resource level SOA QoS requirements 684
    16.12.4.3 SOA security considerations 685
    16.12.4.4 Specifying SOA policies 687
16.13 The SOA construction phase 689
16.13.1 Leveraging legacy applications 689
16.13.2 The SOA programming and implementation model 692
16.13.3 Service construction 693
  16.13.3.1 Constructing an SOA service: the provider perspective 694
  16.13.3.2 Constructing an SOA service: the client perspective 696
16.14 The SOA testing phase 697
16.15 The SOA provisioning phase 699
  16.15.1 Service certification 699
  16.15.2 Service metering and rating 699
16.16 The SOA deployment phase 700
16.17 The SOA execution phase 702
16.18 The SOA management and monitoring phase 702
16.19 SOA governance 703
  16.19.1 SOA versus IT governance 703
  16.19.2 SOA governance types 704
16.20 Summary of learning objectives 707
Review questions 708
Exercises 709

Part IX Service management 711

Chapter 17: SOA and Web service management 713

17.1 Managing distributed systems 714
  17.1.1 Purpose of distributed systems management 714
  17.1.2 Distributed management for Web services 717
17.2 Enterprise management frameworks 720
17.3 Conceptual management architecture 722
  17.3.1 Management capabilities and functions 723
17.4 Standard distributed management frameworks 726
  17.4.1 Simple Network Management Protocol 726
  17.4.2 The Common Information Model/Web-based Enterprise Management 727
17.5 Web service management 728
  17.5.1 Features of Web service management 728
  17.5.2 Functional characteristics of Web service management 729
  17.5.3 Service management architectural approaches 732
17.5.4 Management infrastructure services 734
17.5.5 Connecting service management and application channels 736
17.6 The Web Services Distributed Management initiative 738
17.6.1 Management Using Web Services (MUWS) 740
17.6.2 Management of Web Services (MOWS) 742
17.7 Summary of learning objectives 743
Review questions 743
Exercises 744

Part X  Emerging trends 747

Chapter 18: Cloud Computing 749
18.1 What is Cloud Computing? 750
18.1.1 Essential characteristics of Cloud Computing 751
18.1.2 Cloud service delivery models 753
18.1.2.1 Infrastructure as a Service (IaaS) 754
18.1.2.2 Platform provider as a Service (PaaS) 755
18.1.2.3 Software as a Service (SaaS) 756
18.1.3 Cloud deployment models 757
18.1.3.1 Public cloud 758
18.1.3.2 Private cloud 758
18.1.3.3 Hybrid cloud 759
18.2 SOA meets the Cloud 760
18.2.1 Comparing SOA with Cloud Computing 760
18.2.2 SOA deployment: Cloud Computing versus the ESB 761
18.3 Virtualisation 762
18.3.1 Types of virtualisation for Cloud Computing 762
18.3.1.1 Network virtualisation 762
18.3.1.2 Server virtualisation 763
18.3.1.3 Server clustering 763
18.3.1.4 Storage virtualisation 763
18.3.1.5 Application virtualisation 763
18.3.2 System virtualisation and management 764
18.4 Multi-tenancy 765
18.4.1 Approaches to multi-tenancy 766
18.5 Architecture model for Cloud Computing 768
18.5.1 Operational roles in cloud architecture 768
18.5.2 Functional parts in the cloud architecture 769
18.5.3 Cloud APIs

18.6 Cloud security
  18.6.1 Cloud security risks
  18.6.2 Cloud application security
    18.6.2.1 IaaS level application security
    18.6.2.2 PaaS level application security
    18.6.2.3 SaaS level application security

18.7 Cloud service lifecycle

18.8 Cloud standards
  18.8.1 Interoperability standard initiatives
  18.8.2 Security standard initiatives
  18.8.3 API standard initiatives

18.9 Benefits and risks of Cloud Computing
  18.9.1 Potential benefits of Cloud Computing
  18.9.2 Potential risks of Cloud Computing

18.10 Summary of learning objectives

Review questions
