B. Malcolm Brown
Jan Lang
Ian G. Wood
Editors

Spectral Theory,
Function Spaces
and Inequalities

New Techniques and Recent Trends
## Contents

Preface ................................................................. vii

_B.M. Brown, J. Lang and I.G. Wood_
David Edmunds' Mathematical Work .............................. ix

_B.M. Brown, J. Lang and I.G. Wood_
Desmond Evans' Mathematical Work ............................... xi

_B.M. Brown and M.S.P. Eastham_
Generalised Meissner Equations with an Eigenvalue-inducing Interface .................................................. 1

_B.M. Brown and K.M. Schmidt_
On the HELP Inequality for Hill Operators on Trees .......... 21

_F. Cobos, L.M. Fernández-Cabrera and A. Martínez_
Measure of Non-compactness of Operators Interpolated by Limiting Real Methods ............................................. 37

_R.L. Frank and E.H. Lieb_
A New, Rearrangement-free Proof of the Sharp Hardy-Littlewood-Sobolev Inequality ................................. 55

_D.D. Haroske_
Dichotomy in Muckenhoupt Weighted Function Space:
A Fractal Example .................................................... 69

_I. Knowles and M.A. LaRussa_
Lavrentiev's Theorem and Error Estimation in Elliptic Inverse Problems ....................................................... 91

_V. Kokilashvili and A. Meskhi_
Two-weighted Norm Inequalities for the Double Hardy Transforms and Strong Fractional Maximal Functions in Variable Exponent Lebesgue Space .................................................. 105

_J. Lang and O. Méndez_
Modular Eigenvalues of the Dirichlet \( p(\cdot)-\)Laplacian and Their Stability .................................................. 125

_R.T. Lewis_
Spectral Properties of Some Degenerate Elliptic Differential Operators ....................................................... 139
Contents

B. Opic
  Continuous and Compact Embeddings of Bessel-Potential-Type Spaces ........................................... 157

Y. Saito and T. Umeda
  A Sequence of Zero Modes of Weyl Dirac Operators and an Associated Sequence of Solvable Polynomials ........... 197

A.V. Sobolev
  A Szegö Limit Theorem for Operators with Discontinuous Symbols in Higher Dimensions: Widom’s Conjecture ............. 211

V.D. Stepunov
  On a Supremum Operator .................................................. 233

H. Triebel
  Entropy Numbers of Quadratic Forms and Their Applications to Spectral Theory ........................................... 243
