18th IFAC Symposium on Automatic Control in Aerospace 2010

Nara, Japan
6-10 September 2010

Editors:

Yoshimasa Ochi
Shinichi Nakasuka

Houria Siguerdidjane

ISBN: 978-1-61839-121-6
# CONTENTS

## Navigation, Guidance, and Control of Aircraft

**Automatic Guidance of an Aircraft using Predictive Control in a Visual Servoing Scheme** ................................................................. 1  
**Satija Lumbar, Gregor Dolanc, Darko Vrečko, Stanko Strmčnik, and Drago Makto**

**Gust Alleviation Flight Controller Using Robust Model Predictive Control** ................................................................. 7  
**Masayuki Sato**

**Design of a Model-Following PID Control System for an MAV** ................................................................. 13  
**Hiroyuki Kondo and Yoshimasa Ochi**

**Linear Parameter-Varying Control of a Large Blended Wing Body Flexible Aircraft** ................................................................. 19  
**C. Westermayer, A. Schirrer, M. Hemedi, and M. Kozek**

**The Unified Technique for Multimode Flight Control Systems Designing** ................................................................. 25  
**V. G. Borisov, G. N. Nachinkina, B. V. Pavlov, and A. M. Shevchenko**

### Navigation, Guidance, and Control of Unmanned Aerial Vehicles

**Position Control of a Quad-Rotor UAV using Vision** ................................................................. 31  
**Luis-Rodolfo Garcia-Carrillo, Eduardo Rondon, Anand Sanchez, Alejandro Dzul, and Rogelio Lozano**

**Quaternion Based Navigation and Control for Small Unmanned Helicopter** ................................................................. 37  
**Satoshi Suzuki and Kenzo Nonami**

**Wind Field Bounded Error Identification and Robust Guidance Law Design for a Small-Scaled Helicopter** ................................................................. 43  
**Walid Achnour, Helene Piet-Lahanier, and Houria Siguerdidjane**

**Laser-Based Trajectory Tracking H2 Control of Autonomous Rotorcraft** ................................................................. 49  
**B. J. Guerreiro, C. Silvestre, and R. Cunha**

**Guidance and Control for Chase UAV via Sliding Mode Approach** ................................................................. 55  
**Takeshi Yamasaki and S. N. Balakrishnan**

**Fuzzy Logic Based Autonomous Landing System for Unmanned Aerial Vehicles** ................................................................. 61  
**Okyay Kaynak**

**Optimal Guidance Design for UAV Visual Target Tracking in an Urban Environment** ................................................................. 69  
**Yoko Watanabe and Patrick Fabiani**

**Closed Loop Stability of Synthetic Waypoint Guidance Algorithm** ................................................................. 75  
**Eran D.B. Medagoda**

**Three-layer Aircraft Control: Path-planning, Guidance, Model Predictive Controller as Autopilot** ................................................................. 81  
**A. Voelker, M. Dördelmann, K. Kouwamas, E. N. Pistikopoulos, M. Shanmugavel, A. Tsourdos, B. A. White, and R. Zbikowski**

**UAV Guidance Law for Target Tracking along constrained Bow-Shaped Trajectory based on Lyapunov Vector Field** ................................................................. 87  
**Niki Regina and Matteo Zanzi**

**Multiple UAV Task Assignment using Descriptor Functions** ................................................................. 93  
**Marta Niccolini, Mario Innocenti, and Lorenzo Pollini**

**On the Definition of Curve’s Frame at the Points of Inflection** ................................................................. 99  
**M. A Shah, A. Tsourdos, D. James, and N. Aouf**
Principles and Systems of Heavy WIG-Craft Flight Control .......................................................... 106

Alexander V. Nebylov

Smart Control Systems for Next-Generation Autonomous Wing-In-Ground Effect Vehicles ...................... 112

Alexander Nebylov, Sukrit Sharan, and Farid Arifuddin

Nonlinear/Optimal Guidance and Control of Missiles
Intercept Guidance for Cooperative Aircraft Defense against a Guided Missile ........................................ 118

Takeshi Yamasaki and S. N. Balakrishnan

Cooperative Guidance for Naval Area Defence ......................................................................................... 124

Hyo-Sang Shin, Stéphane Le Méneé, Antonios Tsourdos, Keith Markham, Brian White, and Rafal Zbikowski

Impact Angle Constrained Suboptimal Terminal Guidance of Interceptors for Air Defence ......................... 130

Mayuri Tatiya, Namrata Bhatia, and Radhakant Padhi

Observability Analysis of Advanced Guidance Laws with Bearing-Only Measurement .............................. 136

Chang-Hun Lee, Tae-Hun Kim, and Min-Jea Tahk

Launch Vehicles
Nonlinear Optimal Reentry Guidance and Control of RLV in Pitch Plane ................................................. 142

O. Halbe, S. Mathavaraj, P. Sarmah, C. Chawla, P. Chethana, and R. Padhi

State Estimation and Quick Trajectory Optimization for Air-Launch Rocket .............................................. 148

Masashi Miura

Theory and Software for Simulation of Complex Flexible Aerospace Vehicles and Smart Control ................ 154

Alexander I. Panferov, Alexander V. Nebylov, and Sergey A. Brodsky

A Suboptimal Guidance Design using Continuous-Time MPSP with Input Inequality Constraint in a Hypersonic Mission ...................................................................................................... 160

Arnab Maity and Radhakant Padhi

Navigation, Guidance, and Control of Spacecraft
Advanced Descent Scheme for Lunar Landing .............................................................................................. 166

Ibrahim Mustafa Mehedi, and Takashi Kubota

Precise Landing of Space Probe on Asteroid Using Multiple Markers ....................................................... 172

Naoko Ogawa, Fuyuto Terui, and Jun'ichiro Kawaguchi

Two-dimensional Trajectory Optimization of a Soft Lunar Landing from a Parking Orbit Considering a Landing Site .............................................................................................................................................. 178

Jong-Sun Ahn, Bong-Gyun Park, and Min-Jea Tahk

Small Space Debris Sweeper with Probing .................................................................................................. 184

Masayuki Ikeuchi, and Satomi Kawamoto

Singularities of Optimal Attitude Motions .................................................................................................. 190

James D. Biggs

Orbital Experiments of Linearly Interpolated Gain Scheduling Attitude Controller Using ETS VIII Spacecraft .............................................................................................................................. 194

Yoshiro Hamada, Takashi Ohtani, Takashi Kida, Tomoyuki Nagashio, Isao Yamaguchi, Tokio Kasai, Takahiro Igawa, Shinji Mitani, Kei Sunagawa, and Masafumi Ikeda
On-Orbit Experiment Results of Robust Symmetric Attitude Controller for ETS-VIII Spacecraft
Tomoyuki Nagashio, Takashi Kida, Takashi Ohtani, Yoshiro Hamada, Isao Yamaguchi, Tokio Kasai, Shinji Mitani, Kei Sunagawa, and Masafumi Ikeda

Extended Model Recovery Anti-Windup for Satellite Control
Josep Boada, Christophe Prieur, Sophie Tarbouriech, Christelle Pittet, and Catherine Charbonnel

Input-Shaped Link Motion for Attitude Control of Underactuated Planar Space Robot Equipped with Flexible Appendages
Hirohisa Kajima and Shinya Kasai

Guidance and Robust Gyromoment Attitude Control of Agile Observation Satellite
Ye. I. Somov, S. Butyrin, and S. Somov

Translational Motion Control for Asymmetric Flexible Satellite and Its Vibration Suppression Effect
Tsutomu Nakamura

Prospective 3-Axis Attitude Control using Solar Radiation Pressure
Yoshinobu Okano, Hironori Sahara, and Ryu Funase

Single Modal Vibration Control of Laminated Plates based on the Optimal Placement of a Sensor and an Actuator
Masaki Kameyama and Hisao Fukunaga

Micro/Nano Satellites
Satellite Design Methodology to Suppress Time-varying Residual Magnet Effects on Attitude for Nano-Satellites
Tomoya Suehiro

Development and Operation of Microsatellite “MAIDO-1” and On-orbit Demonstration of Fudai Sun Sensor
Hiroshi Okubo, Takaaki Isono, and Takatoshi Obata

Attitude Determination and Control System for the Nano-JASMINE Mission
Takaya Inamori, Nobutada Sako, and Shinichi Nakasuka

Vision Based Navigation for Space Exploration
Vision-Based Guidance, Navigation, and Control of Hayabusa Spacecraft – Lessons Learned from Real Operation
Tatsuaki Hashimoto, Takashi Kubota, Jun’ichiro Kawaguchi, Masashi Uo, Kenichi Shirakawa, Takashi Kominato, and Hideo Morita

Hans Kruger and Stephan Theil

GNC Technologies for NEO missions
C. Cavel, G. Jonniaux, G. Flandin, and M-C. Perkinson

Simulation Infrastructure for Autonomous Vision-Based Navigation Technologies
D. Neveu, V.S. Bilodeau, M. Alger, B. Moffat, J-F. Hamel, and J. de Lafontaine

Vision Based Navigation for Space Exploration
G. Flandin, N. Perrimon, B. Polle, P. Vidal, C. Philippe, and R. Drai

Adaptive & Robust Guidance and Control of the Information Satellites
Robust Attitude Control of a Communication Satellite with Large-scale Flexible Antennas
Ye. I. Somov, G. P. Titov, and Ye. N. Yakimov

Long-Distance, Drag-Free, Low-Thrust, Low-Earth-Orbit Formation Control
Enrico Canuto, Luca Massotti, Andres Molano-Jimenez, and Carlos Perez
Guidance and Robust Pulse-width Control of an Information Satellite at Initial Modes .......................................................... 302
Sergey Somov

Preliminary AOCS Design for Pointing Budget Assessment of the BIOMASS Candidate Earth Explorer Core Mission .............................................................................................................................................. 308
Samir Bennani, Mathieu Claey, Luca Massotti, Finn Ankersen, and Pierluigi Silvestrini

**Worst Case and Safety Analysis Tools for Autonomous Rendezvous System**

Integrated Validation and Verification Framework for Autonomous Rendezvous Systems .......................................................... 314
Emanuele Di Sotto, Nuno Paulino, and Sohrab Salehi

Worst-case Analysis of Autonomous Rendezvous Systems ........................................................................................................ 320
Wenfei Wang, Prathyush P. Menon, Nuno M. Gomes Paulino, Emanuele Di Sotto, Sohrab Salehi, and Declan G. Bates

Mu-Analysis Based Verification and Validation of Autonomous Satellite Rendezvous Systems .................................................. 326
Aymeric Kron, Jean Francois Hamel, Alexandre Garus, and Jean de Lafontaine

Enhanced Frameworks for Safety Verification of Autonomous Rendezvous Systems ............................................................ 332
Christoph Maier and Antonis Papachristodoulou

**Formation Flight and Swarming Systems**

EKF-SLAM based Approach for Spacecraft Rendezvous Navigation with Unknown Target Spacecraft ........................................... 338
Arne Sonnenburg, Marcel Tkocz, and Klaus Janschek

Quasi-LTV Polynomial Eigenstructure Assignment Control for Formation Flying Around Sun-Earth L2 Point ...................... 344
Feng Wang, Antonios Tsourdos, Rafa l Zbikowski, and Brian A. White

Gravity-Coulomb Force Combined Three-Body Problem ........................................................................................................ 350
Hiroshi Yamakawa and Mai Bando

Virtual Structure Based Attitude Control of Tether-Controlled Spinning Solar Sail Considering Membrane Vibration ...................... 355
Junichi Nishida and Saburo Matunaga

Active Formation Along an Eccentric Orbit ................................................................................................................................. 361
Mai Bando and Akira Ichikawa

Impulsive Control of Satellite Formation Flying using Orbital Period Difference .................................................................. 367
Sunghoon Mok, Yoonhyuk Choi, and Hyochoong Bang

An Analysis of Dissipation Functions in Swarming Systems .................................................................................................... 373
Derek J. Bennet, James D. Biggs, Colin R. McInnes, and Malcolm Macdonald

Satellite Networks: Solutions against Emerging Space Threats .................................................................................................. 379
Frederic Cristini

Flight-Formation Control of Air Vehicles Based on Collective Motion Control of Organisms .................................................. 385
Yoshinobu Inada and Hideaki Takanobu

Robustness of Deadlock Avoidance in Assembling Large-Scale Structure by Multiple Robots having Trouble and Individual Differences ........................................................................................................ 391
Masayuki Otani, Kiyohiko Hattori, Hiroyuki Sato, and Keiki Takadama

**FDI and Active Fault Tolerant Control Systems in Aerospace**

Fault Detection and Isolation of an Aircraft Using Set-Valued Observers .................................................................................. 397
Paulo Rosa, Carlos Silvestre, Jeff. S. Shamma, and Michael Athans
Robust Fault Diagnosis Strategies for Spacecraft: Application to LISA Pathfinder Experiment .................................403
Alexandre Falcoz, Fabrice Boquet, Marc Dinh, Bernard Polle, Gregory Flandin, and Eric Bornschlegl

A Solution for Management of Fault Diagnostic and Fault Tolerance Performances in Active FTC Schemes ..........409
J. Cieslak, D. Henry, and A. Zolghadri

Fault-Tolerant Control using a Virtual Actuator using LPV Techniques: Application to a Two-Degree of Freedom
Helicopter ........................................................................................................................................................................415
Saul Montes de Oca and Vicenc Puig

Active Fault Tolerant Control System for a High Accuracy Planet-Image and Stellar-Pointing Satellite ................421
G. Bertoni, P. Castaldi, N. Mimmo, and S. Simani

Application of a Fault Accommodation Approach to a Re-Entry Vehicle .................................................................427
Andres Marcos, Murray Kerr, and Luis F. Penin

Identification and Monitoring of Aircraft Systems

IMMUNE Project: An Overview .......................................................................................................................................433
C. Doll, G. Hardier, A. Varga, and C. Kappenberger

In-Flight Aircraft Monitoring using a Frequency Domain Parameter Identification ..............................................439
G. Hardier and A. Bucharles

IMMUNE : Control Reallocation after Surface Failures using Model Predictive Control ............................................445
L. Lafourcade, Ch. Cumer, and C. Doll

Identification and Optimal Control Methodology for an Active Twist Rotor ..............................................................451
Thomas Rakotomamonjy and Binh Dang Vu

Flight Vehicle System Identification via Nonlinear Smoothing Combined with Unscented Transform ..................457
Nobuhiro Yokoyama

 Unscented Batch Sequential Filter and Its Application to Relative Orbit Determination for Formation Flight ....463
Yuichi Tsuda

Estimation for Spacecraft Systems

Multiple Model Kalman Filter for Star Sensor Calibration ..........................................................................................470
Xiong Kai and Liu Liangdong

New Star Identification Algorithm for Multiple Star Trackers with Unequal Qualities ..........................................476
Koki Ho and Shinichi Nakasuka

Dynamic Analysis and Adaptive Parameter Estimation for Variable Speed Control Moment Gyros with Uncertainty
..................................................................................................................................................................................482
Jin Jin, Jingrui Zhang, and Zaoyezheng Liu

Spacecraft Attitude and Body Rate Estimation with Four Star Sensor Heads: Concepts and Ground and On-Orbit
Verification Results .........................................................................................................................................................488
Katsumasa Miyatake, Shoji Yoshikawa, Haruhiko Shimoji, Hiroyuki Kawano, Takeshi Suzuki, Yoshinori Kunii,
Kazumori Hama, and Noriaki Oka

Orbit Estimation for a Spacecraft by using Radiometric Observation ........................................................................494
Tsutomu Ichikawa
Sensor/Actuator Systems

New Coning Error Compensation Method Using Direct Signal Estimation .................................................. 499
Chul Woo Kang, Chan Gook Park, and Nam Ik Cho

On GPS/GLONASS/INS Tight Integration for Gimbal and Strapdown Systems of Different Accuracy .................... 504
A. A. Golovan, O. V. Demidov, and N. B. Yavllova

Smart Algorithms for Astronaut Localization and Navigation on the Surface of Mars Planet Based on Natural Constraints ........................................................................................................................................ 509
Benzerrouk Hamza, Alexander Nebylov, and Gennady Yatsevitch

Application of the Electrostatic Accelerometer MAC04 in Space Missions ............................................................. 515
Victor Fedosov and Milan Chvojka

Satellite Operation Improvement through Efficient Data Combination in Ground Station Networks ....................... 521
Marco Schmidt and Klaus Schilling

Control/Optimization Theory

Robust Analysis of Demeter Benchmark via Quadratic Separation .............................................................................. 528
Dimirri Peaucelle, Alberto Bortott, Frederic Gouaisbaut, Denis Arzelier, and Christelle Pittet

Structured Flight Control Law Design using Non-Smooth Optimization ............................................................ 534
M. Gabarrou

A Study on the Dynamic Inversion with Lyapunov Method .................................................................................. 540
Keisuke Enomoto

Convergence and Optimality of Control Law for Periodic Maneuvering Satellites with CMGs .............................. 546
Takuya Ohmura
