# TABLE OF CONTENTS CA 2011

## NONLINEAR SYSTEMS AND CONTROL

729-011: A Series Method to Analyze Nonlinear Volterra Systems under Periodic Excitation  
*Shunting Chen and Stephen A. Billings* ........................................ 1

729-024: Nonlinear Model Predictive Control of a Rotary Crane System using On-Line Optimization  
*Chung-Fu Lee and Yau-Zen Chang* ........................................ 7

729-038: Control Synthesis for Enlarging the Robust Domain of Attraction in Uncertain Polynomial Systems  
*Graziano Chesi* ........................................................................ 14

729-050: Analytic Model based Design of Experiments for Nonlinear Dynamic Systems with Constraints  
*Markus Stadlbauer, Christoph Hametner, and Stefan Jakubek* .......... 20

729-095: Time Sub-Optimal Controller for Triple Integrator Applied to Three-Level Hydraulic System  
*Pavol Bisták* ........................................................................ 28

729-105: Nonlinear Control Techniques for Micro Electrostatic Actuators in the Presence of Parasitics and Parametric Uncertainties  
*Mohammad H. Salah, Ahmad M. Al-Jarrah, and Enver Tallicioglu* ...... 36

## OPTIMAL CONTROL, FILTERING, AND APPLICATIONS

729-009: Hybrid Gauss Pseudospectral and Generalized Polynomial Chaos Algorithm to Solve Stochastic Optimal Control Problems  
*Gerald C. Cottrill and Frederick G. Harmon* ............................... 42

729-074: Optimal Linear Filtering for Stochastic Descriptor Systems with Unknown Inputs  
*Chien-Shu Hsieh* ..................................................................... 52

729-084: Optimal Multi-Loop PI Controllers for the Multivariable Systems  
*Xian Hong Li, Hai Bin Yu, and Ming Zhe Yuan* ............................. 60

729-089: Optimal Balancing Control of a Standing Biped Subject to Constraints  
*Yuming Sun and Qiong Wu* ................................................... 69

729-096: Linear Quadratic Optimal Control Design for Fuzzy Uncertain Systems  
*Dan Xiong, Ye-Hwa Chen, and Han Zhao* ................................... 76

*Jan Rathouský and Jan Štecha* ................................................... 84

## MODELING, ESTIMATION, AND IDENTIFICATION

729-012: Exact Time-Discretization of Differential Riccati Equations with Variable Coefficients  
*Hiroaki Shiobara and Noriyuki Hori* .......................................... 90

729-013: Exact Discrete-Time Model of a Time-Invariant System with Variable Sampling Periods  
*Noriyuki Hori, Hua-Feng Chen, and Alain C. Rabbath* .................. 96

729-019: Design of a New Composite Observer for Vehicle Velocity and Attitude Estimation  
*Jiwon Oh and Seibum B. Choi* .................................................. 102

729-031: Rotation Potential Method based Axial Compressor Low-Speed Characteristics Expansion Prediction in Aero-Engine Modeling  
*Xianghua Huang, Tianhong Zhang, and Chao Tian* ....................... 110

729-033: Estimation of Cardiac Output and Peripheral Resistance using Square-Wave-Approximated Aortic Flow Signal  
*Jin-Oh Hahn* ........................................................................ 115

729-044: Identification of Air-Fuel Ratio Dynamics in SI Engines using Linear Parameter Varying Techniques  
*Rohit Zope, Javad Mohammadpour, Karolos Grigoriadis, Matthew Franchek, Reza Tafreshi, and Houshang Masoudi* .................. 120

729-075: Linear-Form Discretization and its Application to Lewis Oscillators  
*Triet Nguyen-Van and Noriyuki Hori* ....................................... 126

729-088: 3-Dimensional Maneuvering Target Tracking with Online Observed Colored Glint Noise Parameter Estimation  
*Seyed Alireza Banani and Bita Imam* ....................................... 132

729-093: A Novel Cascade Approach to Multibody System Modeling  
*Jin Huang, Ye-Hwa Chen, and Konghui Guo* ............................... 141

729-097: Modeling and Detection of Sporadic Strut Failures on Mining Haul Truck  
*Mohammad Hajizadeh and Mike G. Lipsett* ................................ 149
729-099: Disturbance Attenuation Control via Minimal-Order Observer with a Function of Estimating Unmeasurable Inputs
Katsuhiko Fuwa and Tatsuo Narikiyo .......................... 154

729-100: A Switch Model Approach for UEQO Sensor Diagnostics in the Presence of Asymmetric Faults
Hassene Jammoussi, Matthew A. Franchek, Karolos Grigoriadis, Imad H. Makki, Stephen B. Smith, and James M. Kerns .......................... 160

NONLINEAR AND PROCESS CONTROL

729-008: Predictive Control of an Industrial Toluene Distillation Column with Economic Objective
Carlos R. Porfirio and Darci Odloak .......................... 165

729-017: A New Output Feedback Adaptive Fuzzy Sliding Mode Control
Alireza Gholami and Amir H.D. Markazi .......................... 172

729-045: Implementation of Model Predictive Control in an Industrial Continuous Annealing Furnace
Lukas Bitschnau, Martin Koze, Stefan Jakubek, and Florian Leeber .......................... 177

729-061: On-Line Fault Detection in Non-Linear Systems using Self-Organizing Maps
Anshu Gupta and Arun K. Tangirala .......................... 185

729-076: Design of Sliding Surface for a Class of Mismatched Uncertain Systems to Achieve Output Tracking
Chih-Chiang Cheng, Yan-Si Lin, and Wen-Chi Chi .......................... 193

729-104: Fuzzy Logic Control Design for Advanced Vehicle Thermal Management Systems
Ahmad M. Al-Jarrah, Mohammad H. Salah, and Asma A. Al-Tamimi .......................... 200

DYNAMIC SYSTEM DESIGN AND APPLICATIONS

729-040: Pole Placement and State Observer for Linear Time-Varying Discrete Multi-Variable Systems
Yasuhiro Mutoh and Tomohiro Hara .......................... 205

729-041: Batch On-Line Analytics Challenges and Solutions
Willy K. Wojszyni, Terrence L. Blevins, Mark J. Nixon, and Robert A. Wojewodzka .......................... 211

729-042: Performance of a Switching Controller for Pursuit-Evasion Scenarios with Noisy Measurements
Brian J. Goode, Andrew J. Kurdila, and Michael J. Roan .......................... 217

729-060: Green Approaches to Process Control in Thermal Rooms
Danilo Rairan and Max H. Garzon .......................... 225

729-090: Timed Event Systems and Automata
Abdelaziz Fellah .......................... 233

729-091: Combinatorial Formulation Guided Local Search for Inland Waterway Routing and Scheduling
Tatjana Davidović, Jasmina Lazić, and Vladislav Maras .......................... 241

NETWORKED AND COOPERATIVE CONTROL

729-018: Cooperative Federated Multi-Agent Control of Large-Scale Systems
Qing Dong, Kristen Bradshaw, Frank Ferrese, Li Bai, and Saroj Biswas .......................... 249

729-039: Robust Estimating Design for Unreliable Networked Singular Systems
Ching-Min Lee .......................... 256

729-053: Event-based Control for a Second Order Continuous System
Dario Amaya, João M. Rosário, and Deivy J. Mayorquin .......................... 262

729-057: Adaptive Power and Rate Control for Wireless Networks with Time-Varying Uncertainties
Cunwu Han, Dehui Sun, Yuntao Shi, Zhe Dong, Zhijun Li, and Lipu Wu .......................... 269

729-078: Adaptive Dynamic Surface Control for Leader-Follower Formation of Marine Surface Vehicles with Uncertain Dynamics
Zhouhua Peng, Dan Wang, Gang Sun, Tieshan Li, and Weiyao Lan .......................... 274

729-094: A Nonholonomic Transferable Utility Game
James Lindsay and Sidney N. Givigi Jr. .......................... 281

ADDITIONAL PAPER

747-024: The Effects of Mobility on Handheld Device in Text Reading
Eunil Park and Ki Joon Kim .......................... 287

AUTHOR INDEX .......................... 293
