Oil and Gas
Exploration and
Production
Reserves, costs, contracts

Third edition revised and updated

With contributions by

D. Babusiaux (IFP Energies nouvelles) • S. Barreau (IFP Energies nouvelles)
P.R. Bauquis (Total) • N. Bret-Rouzaut (IFP Energies nouvelles) • A. Chétrit (Total)
P. Copinschi (IFP Energies nouvelles) • J.P. Favennec (IFP Energies nouvelles)
R. Festor (Total) • E. Feuillet-Midrier (IFP Energies nouvelles) • M. Grossin (Total)
D. Guirauden (Beicip) • V. Lepez (Total) • P. Sigonney (Total) • M. Valette (Total)

The first edition of this book has been selected for inclusion in Choice’s annual Outstanding Academic titles list. It has been rewarded for its excellence in scholarship and presentation, the significance of its contribution to the field, and its value as important treatment of the subject.

# Table of contents

Preface to the first edition .......................................................... V
Foreword to the third edition ......................................................... VII

## 1 Petroleum: a strategic product ............................................... 1

1.1 Uses, importance, future ....................................................... 1
   1.1.1 Uses of petroleum through the centuries .......................... 1
   1.1.2 The importance of oil .................................................. 4

1.2 Historical background ....................................................... 5
   1.2.1 The large oil companies up until the First World War, early competition .... 5
   1.2.2 Between the wars: the role of the state ............................. 14
   1.2.3 Between the wars (2): cooperation and competition between oil companies. The example of the Turkish Petroleum Company ........................................ 17
   1.2.4 After WWII: increasing oil consumption, new oil companies, creation and development of OPEC .................................................. 20
   1.2.5 Weakening of OPEC and fall in prices .............................. 31
   1.2.6 The 1990s: market forces .............................................. 36
   1.2.7 The twenty first century: sustained high prices .................. 37

1.3 The oil market and the oil price .......................................... 44
   1.3.1 Physical parameters which affect the price of crude oil ............ 44
   1.3.2 Mechanisms for setting the price of crude: history ................ 45
   1.3.3 Economic analysis of price formation ................................... 51

1.4 Conclusion ............................................................................ 60

## 2 Oil and gas exploration and production .................................... 61

2.1 How hydrocarbons are formed .............................................. 61
   2.1.1 Sedimentary basins ...................................................... 61
   2.1.2 Petroleum geology ....................................................... 63
   2.1.3 Petroleum system ....................................................... 65
5.3 Concession regimes ......................................................................................... 193
  5.3.1 General framework .................................................................................. 193
  5.3.2 The main features ................................................................................... 194

5.4 Production sharing contracts ........................................................................ 199
  5.4.1 General framework ................................................................................ 199
  5.4.2 The main components ............................................................................ 199

5.5 Other contractual forms .................................................................................. 202
  5.5.1 Service contracts ................................................................................... 202

5.6 Impact of the economic rent sharing on exploration and production activities ................................................................. 204
  5.6.1 Flexibility and investment incentives ...................................................... 204
  5.6.2 Comparison between systems ................................................................. 208
  5.6.3 Perspectives ......................................................................................... 210

6 Decision-making on exploration and production ................................................. 211
  6.1 Strategic analysis and definition of the objectives of the company ............... 211
  6.1.1 Understanding the environment in which the company is operating ........ 211
  6.1.2 Strengths and weaknesses ..................................................................... 212
  6.1.3 The portfolio of activities ..................................................................... 212
  6.1.4 Alliances .............................................................................................. 213
  6.1.5 Strategy Department: organisation and functions ................................... 213

  6.2 Economic evaluation (deterministic) and short-term decision-making .......... 214

  6.3 Decision-making in relation to development and the deterministic calculation of the return ................................................................. 216
  6.3.1 Discount rate and the cost of capital ...................................................... 217
  6.3.2 Constructing a schedule of cash flows, operating cash flows, general remarks ................................................................. 218
  6.3.3 Evaluation criteria for investment projects: net present value (NPV) and rate of return ................................................................. 219
  6.3.4 Equivalent cost .................................................................................... 221
  6.3.5 Financing mix and the equity residual method ...................................... 222
  6.3.6 Acquiring participations, valuing a project .......................................... 223
  6.3.7 Another approach to calculating the return on exploration/production projects: the Arditti method ................................................................. 224
  6.3.8 A new approach: the generalized ATWACC method ......................... 227
  6.3.9 A first step in dealing with uncertainty: sensitivity analysis ................. 229
  6.3.10 An empirical criterion: payback period (duration of financial exposure) ................................................................. 231

  6.4 The decision to explore: introduction to probability ..................................... 231
  6.4.1 The “exploration” data sheet ................................................................ 231
  6.4.2 Expected value .................................................................................... 231
  6.4.3 Sequential decisions and conditional values ........................................... 234
  6.4.4 Limitations applying to the expected value of NPV ............................. 238

7 Information, accounting and competition analysis ............................................ 243
  7.1 Accounting principles ................................................................................ 245
  7.1.1 Capital and operating costs .................................................................. 245
  7.1.2 Reserves .............................................................................................. 248
  7.1.3 Depreciation and provisions .................................................................. 250
