M-13: Multiple Access Capacity and Techniques

Construction of Multiple Access Channel Codes Based on Hash Property
Jun Muramatsu (NTT Corporation, Japan); Shigeki Miyake (NTT, Japan)
pp. 2263-2267

Multiple Access Channel with Partial and Controlled Cribbing Encoders
Himanshu Asnani (Stanford University, USA); Haim H Permuter (Ben-Gurion University, Israel)
pp. 2268-2272

Capacity Regions of Discrete Asynchronous Multiple Access Channels
Lóránt Farkas (Budapest University of Technology and Economics, Hungary); Tamás Kó (Budapest University of Technology and Economics, Hungary)
pp. 2273-2277

On the Capacity of a Hybrid Broadcast Multiple Access System for WDM Networks
Vinay A. Vaishampayan (AT&T Labs - Research & Columbia University, USA); Chao Tian (AT&T Labs - Research, USA); Mark Feuer (AT&T Labs - Research, USA)
pp. 2278-2282

C-13: Coding Theory V

The Ordered Hamming Metric and Ordered Symmetric Channels
Woomyoung Park (University of Maryland, USA); Alexander Barg (University of Maryland, USA)
pp. 2283-2287

Codes and Designs Related to Lifted MRD Codes
Natalia Silberstein (Technion - Israel Institute of Technology, Israel); Tuvi Etzion (Technion-Israel Institute of Technology, Israel)
pp. 2288-2292
Combinatorial Lower Bound for List Decoding of Codes on Finite-Field Grassmannian
Rachit Agarwal (University of Illinois at Urbana-Champaign, USA)
pp. 2293-2297

Density and Bounds for Grassmannian Codes with Chordal Distance
Renaud-Alexandre Pitaval (Aalto University, Finland); Olav Tirkkonen (Aalto University, Finland); Steven D Blostein (Queen's University, Canada)
pp. 2298-2302

Soft-Decision List Decoding of Reed-Muller Codes with Linear Complexity
Ilya Dumer (University of California at Riverside, USA); Grigory Kabatiansky (IIT, Moscow, Russia); Cédric Tavernier (CE e., UAE)
pp. 2303-2307

E-13: Matrix Completion and Rank Minimization

Subspace Expanders and Matrix Rank Minimization
Samet Oymak (California Institute of Technology, USA); Amin Khajehnejad (Caltech, USA); Babak Hassibi (California Institute of Technology, USA)
pp. 2308-2312

Low-Rank Matrix Recovery from Errors and Erasures
Yudong Chen (The University of Texas at Austin, USA); Ali Jalali (University of Texas at Austin, USA); Sujay Sanghavi (University of Texas, Austin, USA); Constantine Caramanis (The University of Texas at Austin, USA)
pp. 2313-2317

A Simplified Approach to Recovery Conditions for Low Rank Matrices
Samet Oymak (California Institute of Technology, USA); Karthik Mohan (University of Washington, USA); Maryam Fazel (California Institute of Technology, USA); Babak Hassibi (California Institute of Technology, USA)
pp. 2318-2322

Tight Recovery Thresholds and Robustness Analysis for Nuclear Norm Minimization
Samet Oymak (California Institute of Technology, USA); Babak Hassibi (California Institute of Technology, USA)
pp. 2323-2327

Support Recovery with Sparsely Sampled Free Random Matrices
Antonia Tulino (Bell Laboratories, USA); Giuseppe Caire (University of Southern California, USA); Shlomo (Shitz) Shamai (The Technion, Israel); Sergio Verdú (Princeton University, USA)
pp. 2328-2332
Me-13: Coding for Memories IV

**Patterned Cells for Phase Change Memories**
Anxiao Andrew Jiang (Texas A&M University, USA); Hongchao Zhou (California Institute of Technology, USA); Zhiying Wang (California Institute of Technology, USA); Jehoshua Bruck (California Institute of Technology, USA)
pp. 2333-2337

**DRESS Codes for the Storage Cloud: Simple Randomized Constructions**
Sameer Pawar (University of California, Berkeley, USA); Nima Noorshams (UC Berkeley, USA); Salim El Rouayheb (University of California, Berkeley, USA); Kannan Ramchandran (University of California at Berkeley, USA)
pp. 2338-2342

**Bounds and Constructions for Granular Media Coding**
Artyom Sharov (Technion, Israel); Ron M. Roth (Technion, Israel)
pp. 2343-2347

**Symbol-Pair Codes: Algebraic Constructions and Asymptotic Bounds**
Yuval Cassuto (EPFL, Switzerland); Simon Litsyn (Tel Aviv University, Israel)
pp. 2348-2352

**On Systematic Encoding for Blaum-Roth Codes**
Qian Guo (Fudan University, P.R. China); Haibin Kan (Fudan University, P.R. China)
pp. 2353-2357

G-13: Network Control

**Network Control: A Rate-Distortion Perspective**
Jubin Jose (University of Texas at Austin, USA); Sriram Vishwanath (University of Texas at Austin, USA)
pp. 2358-2362

**Information Capacity of Energy Harvesting Sensor Nodes**
Ramachandran Rajesh (Indian Institute of Science, India); Vinod Sharma (Indian Institute of Science, India); Pramod Viswanath (University of Illinois, Urbana-Champaign, USA)
pp. 2363-2367

**Exploiting Peer-to-Peer State Exchange for Distributed Medium Access Control**
Ka Hung Hui (Northwestern University, USA); Tianyi Li (Northwestern University, USA); Dongning Guo (Northwestern University, USA); Randall Berry (Northwestern University, USA)
pp. 2368-2372

**Delay Performance of CSMA in Networks with Bounded Degree Conflict Graphs**
Vijay Subramanian (Northwestern University, USA); Murat Alanyali (Boston University, USA)
Polite Water-Filling for Weighted Sum-Rate Maximization in MIMO B-MAC Networks Under Multiple Linear Constraints
Liu An (Peking University, P.R. China); Youjian (Eugene) Eugene Liu (University of Colorado at Boulder, USA); Vincent Lau (The university of science and Technology, Hong Kong); Haige Xiang (Peking University, P.R. China); Wu Luo (Peking University, P.R. China) pp. 2378-2382

Friday, August 5

P-05: Vladimir Tikhomirov "Entropy in Information Theory and Functional Analysis" Plenary Lecture

AC-14: LDPC Codes XII

Decimation-Enhanced Finite Alphabet Iterative Decoders for LDPC Codes on the BSC
Shiva Kumar Planjery (University of Arizona, USA); Bane Vasić (University of Arizona, USA); David Declercq (ETIS lab. ENSEA/Cergy University/CNRS UMR, France) pp. 2383-2387

Optimal and Suboptimal Receivers for Maximal-Rate Root-LDPC Codes Over MIMO Block-Fading Channels
Daniele Capirone (Politecnico di Torino, Italy); Alberto Tarable (Politecnico di Torino, Italy) pp. 2388-2392

Rate-Equivocation Optimal Spatially Coupled LDPC Codes for the BEC Wiretap Channel
Vishwambhar Rathi (Icera, United Kingdom); Ruediger L. Urbanke (EPFL, Switzerland); Mattias Andersson (Royal Institute of Technology, Sweden); Mikael Skoglund (Royal Institute of Technology, Sweden) pp. 2393-2397

Capacity Achieving LDPC Ensembles for the TEP Decoder in Erasure Channels
Pablo M. Olmos (Universidad de Sevilla, Spain); Juan José Murillo-Fuentes (Universidad de Sevilla, Spain); Fernando Pérez-Cruz (Universidad Carlos III de Madrid, Spain) pp. 2398-2402
W-14: Cognitive Communication

**A New Capacity Result for the Z-Gaussian Cognitive Interference Channel**
Stefano Rini (UIC, USA); Daniela Tuninetti (University of Illinois at Chicago, USA); Natasha Devroye (University of Illinois at Chicago, USA)
pp. 2403-2407

**On the Capacity Region of the Cognitive Interference Channel with Unidirectional Destination Cooperation**
Hsuan-Yi Chu (National Taiwan University, Taiwan); Hsuan-Jung Su (National Taiwan University, Taiwan)
pp. 2408-2412

**Capacity of a Class of Overlay Cognitive MAC Radios**
Goochul Chung (University of Texas, USA); Sriram Vishwanath (University of Texas at Austin, USA)
pp. 2413-2417

**Effect of Uncertainties in Modeling Interferences in Coherent and Energy Detectors for Spectrum Sensing**
Ezio Biglieri (Universitat Pompeu Fabra, Barcelona, Spain)
pp. 2418-2421

S-14: Source Coding II

**On the Dynamic Construction of an Antidictionary with Linear Complexity**
Takahiro Ota (Nagano Prefectural Institute of Technology, Japan); Hiroyoshi Morita (University of Electro-Communications, Japan); Hirotada Fukae (Shikoku Polytechnic College, Japan)
pp. 2422-2426

**A Bio-Inspired Approach to Condensing Information**
Rudolf Mathar (RWTH Aachen University, Germany); Anke Schmeink (RWTH Aachen University, Germany)
pp. 2427-2431

**The "Source-Simplification" Aspect of Signaling**
Pulkit Grover (University of California, Berkeley, USA); Anant Sahai (UC Berkeley, USA)
pp. 2432-2436

N-14: Relaying in Wireless Networks

**Physical-Layer MIMO Relaying**
Anatoly Khina (Tel Aviv University, Israel); Yuval Kochman (Massachusetts Institute of Technology, USA); Uri Erez (Tel Aviv University, Israel)
pp. 2437-2441
The Necessity of Relay Selection for Beamforming in Amplify-and-Forward Networks
Erdem Koyuncu (University of California, Irvine, USA); Hamid Jafarkhani (University of California, Irvine, USA)
pp. 2442-2446

Half-Duplex Relaying Based on Quantize-and-Forward
Sha Yao (Royal Institute of Technology, Sweden); Mikael Skoglund (Royal Institute of Technology, Sweden); Tung T Kim (Princeton University, USA); H. Vincent Poor (Princeton University, USA)
pp. 2447-2451

Modulation for MIMO Networks with Several Users
Anatoly Khina (Tel Aviv University, Israel); Ayal Hitron (Tel Aviv University, Israel); Uri Erez (Tel Aviv University, Israel)
pp. 2452-2456

M-14: Deterministic Approach to Gaussian Channels

The Capacity Region of the Linear Shift Deterministic Y-Channel
Anas Chaaban (TU Darmstadt, Germany); Aydin Sezgin (RUB & Digital Communication Systems, Germany)
pp. 2457-2461

Two Unicast Information Flows Over Linear Deterministic Networks
I-Hsiang Wang (University of California at Berkeley, USA); Sudeep Kamath (U.C. Berkeley, USA); David Tse (University of California at Berkeley, USA)
pp. 2462-2466

Secret Writing on Dirty Paper: A Deterministic View
Mustafa El-Halabi (Texas A&M University, USA); Tie Liu (Texas A&M University, USA); Costas N Georghiades (Texas A&M University, USA); Shlomo (Shitz) Shamai (The Technion, Israel)
pp. 2467-2471

Wireless Network Simplification: The Gaussian N-Relay Diamond Network
Caner Nazaroglu (METU, Turkey); Ayfer Özgür (EPFL, Switzerland); Christina Fragouli (EPFL, Switzerland)
pp. 2472-2476

C-14: Coding Theory VI

Minimal Trellis for Systematic Recursive Convolutional Encoders
Cecilio Pimentel (UFPE, Brazil); Richard Demo Souza (Federal University of Technology - Paraná (UTFPR), Brazil); Bartolomeu F. Uchoa-Filho (Federal University of Santa Catarina & Communications Research Group, Brazil); Isaac Benchimol (IFAM, Brazil)
pp. 2477-2481
Simultaneous Code/Error-Trellis Reduction for Convolutional Codes Using Shifted Code/Error-Subsequences
Masato Tajima (University of Toyama, Japan); Koji Okino (University of Toyama, Japan); Takashi Miyagoshi (University of Toyama, Japan)
pp. 2482-2486

Partial Unit Memory Codes Based on Gabidulin Codes
Antonia Wachter (Ulm University, Germany); Vladimir Sidorenko (University of Ulm, Germany); Martin Bossert (University of Ulm, Germany); Victor V. Zyablov (Institute for Information Transmission Problems (IITP) RAS, Russia)
pp. 2487-2491

Delay Invariant Convolutional Network Codes
Qifu T Sun (The Chinese University of Hong Kong, Hong Kong); Sidharth Jaggi (Chinese University of Hong Kong, Hong Kong); Shuo-Yen Robert Li (The Chinese University of Hong Kong, Hong Kong)
pp. 2492-2496

E-14: Statistical Estimation

Some Limits to Nonparametric Estimation for Ergodic Processes
Hayato Takahashi (The Institute of Statistical Mathematics, Japan)
pp. 2497-2498

Population Size Estimation Using a Few Individuals as Agents
Farid Movahedi Naini (EPFL, Switzerland); Olivier Dousse (Nokia Research Center, Switzerland); Patrick Thiran (EPFL, Switzerland); Martin Vetterli (EPFL, Switzerland)
pp. 2499-2503

Target Localization with Binary Observations: Effect of Censoring Non-Detecting Sensors
Arian Shoari (University of Rochester, USA); Alireza Seyedi (University of Rochester, USA)
pp. 2504-2508

Confidence Sets in Time-Series Filtering
Boris Ryabko (Siberian State University of Telecommunication and Informatics & Institute of Computational Technologies SB RAN, Russia); Daniil Ryabko (INRIA Lille-Nord Europe, France)
pp. 2509-2511

Me-14: Storage capacities

Computing the Capacity of Rewritable Memories
Christoph Bunte (ETH Zurich, Switzerland); Amos Lapidoth (ETHZ, Switzerland)
pp. 2512-2516
Characterizing Capacity Achieving Write Once Memory Codes for Multilevel Flash Memories
Ryan Gabrys (UCLA, USA); Lara Dolecek (UCLA, USA)
pp. 2517-2521

Variable-Level Cells for Nonvolatile Memories
Anxiao Andrew Jiang (Texas A&M University, USA); Hongchao Zhou
(California Institute of Technology, USA); Jehoshua Bruck (California Institute of Technology, USA)
pp. 2522-2526

Sum-Capacity of Multiple-Write Noisy Memory
Lele Wang (UCSD, USA); Young-Han Kim (UCSD, USA)
pp. 2527-2531

G-14: Delay and Stability in Networks

Transmission Control of Two-User Slotted ALOHA Over Gilbert-Elliott Channel: Stability and Delay Analysis
Anthony Fanous (University of Maryland, College Park, USA); Anthony Ephremides (University of Maryland at College Park, USA)
pp. 2532-2536

Variable Frame Based Max-Weight Algorithms for Networks with Switchover Delay
Güner D Çelik (MIT, USA); Sem Borst (Alcatel-Lucent, Bell Labs & Eindhoven University of Technology, USA); Phil Whiting (Bell Labs, Lucent Technologies, USA); Eytan Modiano (MIT, USA)
pp. 2537-2541

Towards a Queueing-Based Framework for In-Network Function Computation
Siddhartha Banerjee (The University of Texas at Austin & UT Austin, USA); Piyush Gupta (Bell Labs, Alcatel-Lucent, USA); Sanjay Shakkottai (The University of Texas at Austin, USA)
pp. 2542-2546

On the Scaling of Non-Asymptotic Capacity in Multi-Access Networks with Bursty Traffic
Florin Ciucu (T-Labs / TU Berlin, Germany)
pp. 2547-2551

AC-15: LDPC Codes XIII

Windowed Decoding of Spatially Coupled Codes
Aravind R. Iyengar (University of California, San Diego, USA); Paul H. Siegel (University of California, San Diego, USA); Ruediger L Urbanke (EPFL, Switzerland); Jack Wolf (UCSD, USA)
pp. 2552-2556
**Reduced-Complexity Collaborative Decoding of Interleaved Reed-Solomon and Gabidulin Codes**  
Hans Kurzweil (University of Erlangen-Nuremberg, Germany); Mathis Seidl (University of Erlangen-Nuremberg, Germany); Johannes Huber (University of Erlangen-Nuremberg, Germany)  
pp. 2557-2561

**Threshold Saturation on Channels with Memory Via Spatial Coupling**  
Shrinivas Kudekar (Los Alamos National Laboratory, USA); Kenta Kasai (Tokyo Institute of Technology, Japan)  
pp. 2562-2566

**Universality for the Noisy Slepian-Wolf Problem Via Spatial Coupling**  
Arvind Yedla (Texas A&M University, USA); Henry D Pfister (Texas A&M University, USA); Krishna Narayanan (Texas A&M University, USA)  
pp. 2567-2571

**W-15: X Channels**

**Weighted Sum Rate Maximization for the MIMO X Channel Through MMSE Precoding**  
Adrian Agustin (Technical University of Catalonia (UPC), Spain); Josep Vidal (Universitat Politècnica de Catalunya, Spain)  
pp. 2572-2576

**When Alamouti Codes Meet Interference Alignment: Transmission Schemes for Two-User X Channel**  
Liangbin Li (University of California, Irvine, USA); Hamid Jafarkhani (University of California Irvine, USA); Syed Ali Jafar (University of California Irvine, USA)  
pp. 2577-2581

**Interference Alignment Over Asynchronous X Networks**  
Hossein Najafi (University of Waterloo, Canada); Mehdi Torbatian (University of Waterloo, Canada); Mohamed Oussama Damen (University of Waterloo, Canada)  
pp. 2582-2586

**S-15: Quantization**

**Scalar Quantization with Rényi Entropy Constraint**  
Wolfgang Kreitmeier (University of Passau, Germany); Tamas Linder (Queen’s University, Canada)  
pp. 2587-2591

**Asymmetric Quantizers are Better At Low SNR**  
Tobias Koch (University of Cambridge, United Kingdom); Amos Lapidoth (ETHZ, Switzerland)
A Necessary and Sufficient Condition for Transform Optimality in Source Coding
Emrah Akyol (UCSB, USA); Kenneth Rose (University of California, Santa Barbara, USA)
pp. 2597-2601

Low-Precision A/D Conversion for Maximum Information Rate in Channels with Memory
Georg Zeitler (Technische Universität München, Germany); Andrew C. Singer (University of Illinois at Urbana Champaign, USA); Gerhard Kramer (Technische Universität München, Germany)
pp. 2602-2606

N-15: Wireless Communication over Fading Channels I

Sum Rate Analysis of Rayleigh Product MIMO Channels with Linear MMSE Receiver
Caijun Zhong (Queen's University Belfast, United Kingdom); Tharmalingam Ratnarajah (Queens University of Belfast, United Kingdom)
pp. 2607-2611

On the Constrained Capacity of Multi-Antenna Fading Coherent Channels with Discrete Inputs
Miguel Rodrigues (University of Porto, Portugal)
pp. 2612-2616

Multiple-Unicast in Fading Wireless Networks: A Separation Scheme is Approximately Optimal
Sreeram Kannan (University of Illinois, Urbana-Champaign, USA); Pramod Viswanath (University of Illinois, Urbana-Champaign, USA)
pp. 2617-2621

M-15: Interference Channels with Relaying

Diversity-Multiplexing Tradeoff in a MIMO Gaussian Interference Channel with a Relay
Ivana Marić (Aviat Networks, USA); Andrea Goldsmith (Stanford University, USA)
pp. 2622-2626

Capacity to Within 3 Bits for a Class of Gaussian Interference Channels with a Cognitive Relay
Stefano Rini (UIC, USA); Daniela Tuninetti (University of Illinois at Chicago, USA); Natasha Devroye (University of Illinois at Chicago, USA)
pp. 2627-2631
The Capacity of the Interference Channel with a Cognitive Relay in Strong Interference
Stefano Rini (UIC, USA); Daniela Tuninetti (University of Illinois at Chicago, USA); Natasha Devroye (University of Illinois at Chicago, USA); Andrea Goldsmith (Stanford University, USA)
pp. 2632-2636

Interference Alignment Aided by Relays for the Quasi-Static X Channel
Dong-sup Jin (Seoul National University, Korea); Jong-Seon No (Seoul National University, Korea); Dong-Joon Shin (Hanyang University, Korea)
pp. 2637-2641

C-15: Coding Theory VII

Lattice Network Coding Via Signal Codes
Chen Feng (University of Toronto, Canada); Danilo Silva (Federal University of Santa Catarina, Brazil); Frank R. Kschischang (University of Toronto, Canada)
pp. 2642-2646

Coding for a Network Coded Fountain
Shenghao Yang (The Chinese University of Hong Kong, Hong Kong); Raymond W. Yeung (The Chinese University of Hong Kong, Hong Kong)
pp. 2647-2651

Linear Coding for Network Computing
Rathinakumar Appuswamy (IBM Research, USA); Massimo Franceschetti (University of California at San Diego, USA); Nikhil Karamchandani (University of California San Diego, USA); Ken Zeger (University of California, San Diego, USA)
pp. 2652-2655

On Network Error Correction Under a Secret Key Model
Danilo Silva (Federal University of Santa Catarina, Brazil)
pp. 2656-2660

E-15: Detection

Sequential Analysis in High-Dimensional Multiple Testing and Sparse Recovery
Matthew Malloy (University of Wisconsin, USA); Robert Nowak (University of Wisconsin - Madison, USA)
pp. 2661-2665

Performance Bounds for Active Sequential Hypothesis Testing
Mohammad Naghshvar (University of California, San Diego, USA); Tara Javidi (UCSD, USA)
pp. 2666-2670
On Reliability Approach to Multiple Hypotheses Testing and to Identification of Probability Distributions of Two Stochastically Related Objects
Evgueni Haroutunian (Institute for Informatics and Automation Problems, Armenia); Aram Yessayan (Institute for Informatics and Automation Problems, Armenia)
pp. 2671-2675

Nearly Minimax Changepoint Detection Procedures
Alexander G Tartakovsky (University of Southern California & Vice President, Argo Science Corp., USA); Moshe Pollak (The Hebrew University of Jerusalem, Israel)
pp. 2676-2680

Me-15: Cryptography IV

Key Reduction of McEliece's Cryptosystem Using List Decoding
Morgan Barbier (École Polytechnique LIX - INRIA Saclay Île de France, France); Paulo S. L. M. Barreto (University of São Paulo, Brazil)
pp. 2681-2685

Constructing Boolean Functions in Odd Number of Variables with Maximum Algebraic Immunity
Konstantinos Limniotis (National and Kapodistrian University of Athens, Greece); Nicholas Kolokotronis (University of Peloponnese, Greece); Nicholas Kalouptsidis (National and Kapodistrian University of Athens, Greece)
pp. 2686-2690

Multi-Dimensional Arrays for Watermarking
Oscar Moreno (Gauss Research Laboratory, Puerto Rico); Andrew Z Tirkel (Scientific Technology, Australia)
pp. 2691-2695

Almost Separating and Almost Secure Frameproof Codes
Marcel Fernández (Technical University of Catalonia, Spain); Grigory Kabatiansky (IITTT, Moscow, Russia); Jose Moreira (Technical University of Catalonia, Spain)
pp. 2696-2700

G-15: Game Theory in Networks

Bargaining Solution for Partial Orthogonal Transmission Over Frequency Selective Interference Channel
Ephraim Zehavi (Bar-Ilan University, Israel); Amir Leshem (Bar-Ilan University, Israel)
pp. 2701-2705
Coalition Games for Transmitter Cooperation in Wireless Networks
Srinivas Yerramalli (University of Southern California, USA); Rahul Jain (University of Southern California, USA); Urbashi Mitra (University of Southern California, USA)
pp. 2706-2710

Spectrum Pricing Games with Arbitrary Bandwidth Availability Probabilities
Gaurav S. Kasbekar (University of Pennsylvania, USA); Saswati Sarkar (University of Pennsylvania, USA)
pp. 2711-2715

Mixed Strategy Nash Equilibrium in Two-User Resource Allocation Games
Jie Gao (University of Alberta, Canada); Sergiy A. Vorobyov (University of Alberta, Canada); Hai Jiang (University of Alberta, Canada)
pp. 2716-2720

AC-16: LDPC Codes XIV

Global Estimation of Anatomical Connection Strength in Diffusion MRI
Tractography by Message-Passing
Milos Ivkovic (Cornell University & Weill Cornell Medical School, USA); Ashish Raj (Weill Cornell Medical College, USA)
pp. 2721-2725

Absorbing Set Spectrum Approach for Practical Code Design
Jiadong Wang (UCLA, USA); Lara Dolecek (UCLA, USA); Zhengya Zhang (University of Michigan, USA); Richard Wesel (University of California, Los Angeles, USA)
pp. 2726-2730

An Optimal Partial Decoding Algorithm for Rateless Codes
Valerio Bioglio (Università di Torino, Italy); Marco Grangetto (Università di Torino, Italy); Rossano Gaeta (Università di Torino, Italy); Matteo Sereno (University of Torino, Italy)
pp. 2731-2736

Degree Distribution Optimization in Raptor Network Coding
Nikolaos Thomos (Swiss Federal Institute of Technology - EPFL, Switzerland); Pascal Frossard (Swiss Federal Institute of Technology - EPFL, Switzerland)
pp. 2736-2740

W-16: Interference Alignment

A Nonlinear Approach to Interference Alignment
Peyman Razaghi (University of Southern California, USA); Giuseppe Caire (University of Southern California, USA)
pp. 2741-2745
Interference Alignment with Per-Antenna Power Constraints
Jonathan Starr (University of Texas, USA); Omar El Ayach (The University of Texas at Austin, USA); Robert Heath (The University of Texas at Austin, USA) pp. 2746-2750

Aligned Interference Neutralization and the Degrees of Freedom of the 2x2x2 Interference Channel
Tiangao Gou (University of California Irvine, USA); Syed Ali Jafar (University of California Irvine, USA); Sang-Woon Jeon (KAIST, Korea); Sae-Young Chung (KAIST, Korea) pp. 2751-2755

Retrospective Interference Alignment
Hamed Maleki (University of California Irvine, USA); Syed Ali Jafar (University of California Irvine, USA); Shlomo (Shitz) Shamai (The Technion, Israel) pp. 2756-2760

S-16: Distributed Source Coding

The Rate-Distortion Function for Product of Two Sources with Side-Information At Decoders
Shun Watanabe (Tokushima University, Japan) pp. 2761-2765

Distributed Compression of Linear Functions: Partial Sum-Rate Tightness and Gap to Optimal Sum-Rate
Yang Yang (Texas A&M University, USA); Zixiang Xiong (Texas A&M University, USA) pp. 2766-2770

Slepian-Wolf Type Problems on the Erasure Channel
Michael Luby (Qualcomm, Inc, USA); Amin Shokrollahi (EPFL, Switzerland) pp. 2771-2775

Information Rates of Densely Sampled Gaussian Data
David L Neuhoff (University of Michigan, USA); Sandeep Pradhan (University of Michigan, USA) pp. 2776-2780

N-16: Wireless Communication over Fading Channels II

On Communication Over Unknown Sparse Frequency-Selective Block-Fading Channels
Arun Pachai Kannu (IIT Madras, India); Philip Schniter (The Ohio State University, USA) pp. 2781-2785
Nearest Neighbour Decoding and Pilot-Aided Channel Estimation in Stationary Gaussian Flat-Fading Channels

Taufiq Asyhari (University of Cambridge, United Kingdom); Tobias Koch (University of Cambridge, United Kingdom); Albert Guillén i Fàbregas (University of Cambridge, United Kingdom)

pp. 2786-2790

On the Szegö-Asymptotics for Doubly-Dispersive Gaussian Channels

Peter Jung (TU-Berlin, Heinrich-Hertz-Chair for Mobile Communication Technology & Fraunhofer German-Sino Lab for Mobile Communications - MCI, Germany)

pp. 2791-2795

Asymptotic Moments for Interference Mitigation in Correlated Fading Channels

Jakob Hoydis (SUPÉLEC, France); Mériouane Debbah (Supelec, France); Mari Kobayashi (Supelec, France)

pp. 2796-2800

M-16: Multiple Access with State Information

Multiple Access Channel with States Known Noncausally At One Encoder and Only Strictly Causally At the Other Encoder

Abdellatif Zaidi (Université Paris-Est Marne La Vallée, France); Pablo Piantanida (SUPELEC, France); Shlomo (Shitz) Shamai (The Technion, Israel)

pp. 2801-2805

Leveraging Strictly Causal State Information At the Encoders for Multiple Access Channels

Min Li (Penn State, USA); Osvaldo Simeone (New Jersey Institute of Technology, USA); Aylin Yener (Pennsylvania State University, USA)

pp. 2806-2810

Multiple-Access Channel with Delayed State Information Via Directed Information

Uria Basher (Ben-Gurion University, Israel); Avihay Shirazi (Ben-Gurion University, Israel); Haim H Permuter (Ben-Gurion University, Israel)

pp. 2811-2815

Spatially Coupled Codes Over the Multiple Access Channel

Shrinivas Kudekar (Los Alamos National Laboratory, USA); Kenta Kasai (Tokyo Institute of Technology, Japan)

pp. 2816-2820
C-16: Coding Theory VIII

A General Framework for Constructing Fast-Decodable Asymmetric Space-Time Codes
Roope Vehkalahti (University of Turku, Finland); Camilla J. Hollanti
(University of Turku & Turku Centre for Computer Science, Finland)
pp. 2821-2825

Maximum Rate of 3- and 4-Real-Symbol ML Decodable Unitary Weight STBCs
Teja Damodaram Bavirisetti (Indian Institute of Science, India); B. Sundar Rajan (Indian Institute of Science, India)
pp. 2826-2830

An Algebraic Look Into MAC-DMT of Lattice Space-Time Codes
Roope Vehkalahti (University of Turku, Finland); Hsiao-feng Francis Lu
(National Chiao Tung University, Taiwan)
pp. 2831-2835

The Complexity of Sphere Decoding Perfect Codes Under a Vanishing Gap to ML Performance
Joakim Jaldén (KTH Royal Institute of Technology, Sweden); Petros Elia
(EURECOM, France)
pp. 2836-2840

E-16: Detection in Communication Systems I

Impulsive Noise Estimation and Cancellation in DSL Using Orthogonal Clustering
Tareq Al-Naffouri (King Fahd University of Petroleum and Minerals, Saudi Arabia); Ahmed A. Quadeer (King Fahd University of Petroleum & Minerals, Saudi Arabia); Giuseppe Caire (University of Southern California, USA)
pp. 2841-2845

Computing Reliability Distributions of Windowed Max-Log-Map (MLM) Detectors: ISI Channels
Fabian Lim (Massachusetts Institute of Technology, USA); Aleksandar Kavcic
(University of Hawaii, USA)
pp. 2846-2850

On Diversity Orders of Distortion Outage for Coherent Multi-Access Channels
Chih-Hong Wang (University of Melbourne, Australia); Alex Leong (University of Melbourne, Australia); Subhrakanti Dey (University of Melbourne, Australia)
pp. 2851-2855

Distributed Detection in Noisy Sensor Networks
Soummya Kar (Princeton University, USA); Ravi Tandon (Princeton University, USA); H. Vincent Poor (Princeton University, USA); Shuguang Cui (Texas A&M University, USA)
pp. 2856-2860
Me-16: Cryptography V

**Assisted Common Information: Further Results**
Vinod M Prabhakaran (EPFL, Switzerland); Manoj Prabhakaran (University of Illinois, Urbana-Champaign, USA)
pp. 2861-2865

**On the Secrecy Degrees of Freedom of Multi-Antenna Wiretap Channels with Delayed CSIT**
Sheng Yang (Supelec, France); Pablo Piantanida (SUPELEC, France); Mari Kobayashi (Supelec, France); Shlomo (Shitz) Shamai (The Technion, Israel)
pp. 2866-2870

**Improved Rate-Equivocation Regions for Secure Cooperative Communication**
Ninoslav Marina (Princeton University, USA); Hideki Yagi (The University of Electro-Communications, Japan); H. Vincent Poor (Princeton University, USA)
pp. 2871-2875

**When is a Function Securely Computable?**
Himanshu Tyagi (University of Maryland, College Park, USA); Prakash Narayan (University of Maryland, USA); Piyush Gupta (Bell Labs, Alcatel-Lucent, USA)
pp. 2876-2880

G-16: Optimal Scheduling in Networks

**Optimal MaxWeight Scheduling in a Multihop Wireless Network Via Branch and Bound**
Pradeep Chathuranga Weeraddana (University of Oulu, Finland); Marian Codreanu (University of Oulu, Finland); Matti Latva-aho (University of Oulu, Finland); Anthony Ephremides (University of Maryland at College Park, USA)
pp. 2881-2885

**Optimal Offline Packet Scheduling on an Energy Harvesting Broadcast Link**
Fatih Ozcelik (Middle East Technical University, Turkey); Hakan Erkai (Middle East Technical University & ASELSAN INC., Turkey); Elif Uysal-Biyikoglu (METU, Turkey)
pp. 2886-2890

**Optimality of Binary Power-Control in a Single Cell Via Majorization**
Hazer Inaltekin (The University of Melbourne, Australia); Stephen Hanly (National University of Singapore, Singapore)
pp. 2891-2895
AC-17: Error exponents

*Extremes of Random Coding Error Exponents*
Albert Guillén i Fàbregas (University of Cambridge, United Kingdom); Ingmar Land (University of South Australia, Australia); Alfonso Martinez (University of Cambridge, United Kingdom)
pp. 2896-2898

*Random-Coding Bounds for Threshold Decoders: Error Exponent and Saddlepoint Approximation*
Alfonso Martinez (University of Cambridge, United Kingdom); Albert Guillén i Fàbregas (University of Cambridge, United Kingdom)
pp. 2899-2903

*New Techniques for Upper-Bounding the MLD Performance of Binary Linear Codes*
Xiao Ma (Sun Yat-sen University, P.R. China); Jia Liu (Sun Yat-sen University, P.R. China); Bao-Ming Bai (Xidian University, P.R. China)
pp. 2904-2908

W-17: Precoding

*Achievable Rates of MIMO-ISI Systems with Linear Precoding and Iterative LMMSE Detection*
Xiaojun Yuan (Chinese University of Hong Kong, Hong Kong); Li Ping (City University of Hong Kong, Hong Kong); Aleksandar Kavcic (University of Hawaii, USA)
pp. 2909-2913

*Precoder Design and Convergence Analysis of MIMO Systems with Krylov Subspace Receivers*
Jun Tong (The University of Newcastle, Australia); Peter J. Schreier (Universitaet Paderborn, Germany); Steve Weller (University of Newcastle, Australia)
pp. 2914-2918

*A Low ML-Decoding Complexity, Full-Diversity, Full-Rate MIMO Precoder*
Pavan K. Srinath (Indian Institute of Science, India); B. Sundar Rajan (Indian Institute of Science, India)
pp. 2919-2923

*Optimal Lattices for MIMO Precoding*
Dževdan Kapetanović (Lund University, Sweden); Hei Victor Cheng (Hong Kong University of Science and Technology, Hong Kong); Wai Ho Mow (Hong Kong University of Science and Technology & HKUST, Hong Kong); Fredrik Rusek (Lund University, Sweden)
pp. 2924-2928
S-17: Source Coding with Side Information

**Zero-Delay Joint Source-Channel Coding for the Gaussian Wyner-Ziv Problem**
Xuechen Chen (University of California Riverside, USA); Ertem Tuncel (UC Riverside, USA)
pp. 2929-2933

**Rate-Distortion Functions for Source Coding with Complementary Side Information**
Roy Timo (University of South Australia, Australia); Alex Grant (University of South Australia, Australia); Gerhard Kramer (Technische Universität München, Germany)
pp. 2934-2938

**Robust Coding for Lossy Computing with Receiver-Side Observation Costs**
Behzad Ahmadi (New Jersey Institute of Technology, USA); Osvaldo Simeone (New Jersey Institute of Technology, USA)
pp. 2939-2943

**Cascade Source Coding with Erased Side Information**
Ravi Tandon (Princeton University, USA); Soheil Mohajer (Princeton, Switzerland); H. Vincent Poor (Princeton University, USA)
pp. 2944-2948

N-17: Wireless Channels

**Modulation Diversity in Fading Channels with Quantized Receiver**
Saif Khan Mohammed (Linkoping University & Dept. Electrical Engineering (ISY), Sweden); Emanuele Viterbo (Monash University, Australia); Yi Hong (Monash University, Australia); A. Chockalingam (Indian Institute of Science, India)
pp. 2949-2953

**Outage Probability Under Channel Distribution Uncertainty**
Ioanna Ioannou (University of Cyprus, Cyprus); Charalampos D Charalambous (University of Cyprus, Cyprus); Sergey Loyka (University of Ottawa, Canada)
pp. 2954-2958

**Scalar Coherent Fading Channel: Dispersion Analysis**
Yury Polyanskiy (Princeton University, USA); Sergio Verdú (Princeton University, USA)
pp. 2959-2963
M-17: Fading Broadcast Channels

**The Two-User Gaussian Fading Broadcast Channel**
Amin Jafarian (The University of Texas, Austin, USA); Sriram Vishwanath (University of Texas at Austin, USA)
pp. 2964-2968

**Gaussian Fading Broadcast Channels with CSI Only At the Receivers: An Improved Constant Gap**
Roy Yates (Rutgers University, USA); Jing Lei (Rutgers University, USA)
pp. 2969-2973

**Effective Capacity Region and Optimal Power Control for Fading Broadcast Channels**
Deli Qiao (University of Nebraska-Lincoln, USA); M. Cenk Gursoy (Syracuse University, USA); Senem Velipasalar (University of Nebraska-Lincoln, USA)
pp. 2974-2978

**Recursive Stream Selection for CF MU-MIMO BC Precoder Design**
Mustapha Amara (EURECOM & Orange Labs (R&D Resa/Win), France); Dirk Slock (Eurecom, France); Yi Yuan-Wu (Orange Labs, France)
pp. 2979-2983

E-17: Detection in Communication Systems II

**Optimum Joint Detection and Estimation**
George V. Moustakides (University of Patras, Greece)
pp. 2984-2988

**Multiple Access Demodulation in the Lifted Signal Graph with Spatial Coupling**
Christian Schlegel (University of Alberta, Canada); Dmitri Truhachev (University of Alberta, Canada)
pp. 2989-2993

**Constrained Epsilon-Equalizer Test for Multiple Hypothesis Testing**
Lionel Fillatre (Université de Technologie de Troyes, France)
pp. 2994-2998

**Linear Programming Based Detectors for Two-Dimensional Intersymbol Interference Channels**
Shrinivas Kudekar (Los Alamos National Laboratory, USA); Jason K Johnson (Los Alamos National Laboratory, USA); Michael Chertkov (Los Alamos National Laboratory, USA)
pp. 2999-3003
G-17: Random Fields

*Capacity of the Ising Channel with Feedback*
Ohad Elishco (Ben-Gurion University of the Negev, Israel); Haim H Permuter (Ben-Gurion University, Israel)
pp. 3004-3008

*Limit Theorems for the Sample Entropy of Hidden Markov Chains*
Guangyue Han (University of Hong Kong, Hong Kong)
pp. 3009-3013

*Gibbs Models with a Variable Range of Interactions on Triangle Grid*
Eugene Pechersky (Institute of Information Transmission Problems, RAS, Russia)
pp. 3014-3016
