1\textsuperscript{st} International Conference on Stone and Concrete Machining

Proceedings

Editors: Berend Denkena
Friedrich-Wilhelm Bach
Wolfgang Tillmann
Werner Theisen

Hannover, Germany
November 23–24, 2011

Institute of Production Engineering and Machine Tools (IFW)
Prof. Dr.-Ing. B. Denkena
An der Universität 2
30823 Garbsen
Germany
Phone: +49 511 762 2553
Fax: +49 511 762 5115

Content

SESSION 1: MACHINING PROCESSES

Influence of machining in the embodied energy and environmental performance of natural stone products ................................................................. 3
A. Gazi, G. Skevis, M.A. Founti, National Technical University of Athens, K. Laskaridis, LITHOS laboratory, P. Anagnostou, Laskaridis Marble S.A

Tool Concepts for Wire Cutting of Reinforced Concrete ......................................................................................................................... 11
J. Köhler, A. Ermisch, B. Denkena, IFW, Leibniz Universität Hannover

Machining of Granite with High Cutting Speeds ................................................................................................................................. 17
J. Bockhorst, Prolng Produktionsberatung

MMC based materials as an alternative cutting material for cutting densely filled and heavily reinforced concrete structures ................................. 25
A. Köhler, H. Jakob, T. Hassel, Fr.-W. Bach, IW, Leibniz University Hanover

Developments in diamond wire cutting for granite quarries .................................................................................................................. 33
S. Kremshofer, H. Seebacher, Tyrolit Schleifmittelwerke Swarovski K.G.

The Cooling Effects of Coolant Supply Mode for Granite Sawing with Diamond Wire ................................................................. 39
H. Huang, L. Guo, X.P. Xu, Huaqiao University

SESSION 2: PROCESS CHARACTERIZATION

Industrial Experimental Plant .................................................................................................................................................. 49
A.Cortés Izurdiaga, S. López Molina, L. González Teruel, L. Pérez Zamora, Fundación Centro Tecnológico Andaluz de la Piedra (CTAP)

Measurement and Analysis Techniques to evaluate the Performance of current Tools used for Stone Processing ........................................... 57
L. Guerra Rosa, P.M. Amaral, T. U. Lisbon

Determination of optimum working condition and development of sawability charts for circular saws in terms of unit energy and roughness of sawn surface ............................................................... 65
Y. Özcelik, Hacettepe University, F. Bayram, N.E. Yaşitli, Aksaray University

Sensor-integrated tools for grinding process monitoring .................................................................................................................. 71
M. Astitouh, L. Overmeyer, H. K. Tönshoff, IPH - Institut für Integrierte Produktion Hannover

Modelling the Effect of Peripheral Speed on Circular Sawblade Stone Cutting Process ............................................................. 79
N.E.Yaşitli, F.Bayram, Aksaray University, Y.Özçelik, Hacettepe University
Slip Safety Analysis of Differently Surface Processed Marbles

A. Sarisik, G. Sarisik, Afyon Kocatepe University, H. Akdas, ESOĞÜ

SESSION 3: MACHINING PROCESSES II

New Cutting Disc for Natural Stone Designed by Simulation

Jaime Martínez, Vicente J. González-Penella, MD. Romero-Sánchez, José M. Cuevas, Celia Guillén, Ángel M. López-Buendía, AIDICO

Deterministic Grain Distribution on Cut-Off Grinding Wheels

B. Denkena, J. Köhler, F. Seifert, IFW, Leibniz Universität Hannover

Efficient Application of Industrial Robots for Automated Stone Sculptures Milling

Study on Process Forces and Wear Behavior of PCD Tools in Stone Milling

E. Uhlmann, M. Manthei, Fraunhofer Institute for Production Systems and Design Technology IPK

Investigations on ultrasonic-assisted drilling and milling of stone

Investigation of the Cutting Performance of the Natural Stone Block Production in Quarries with Armed Chain Cutting Machine

A. Sarisik, G. Sarisik, A. Şentürk, Afyon Kocatepe University

Thermal treatment of contaminated concrete surfaces as a decommissioning method for Nuclear Power Plant Buildings

T. Hassel, M. Petersen, A. Beniyash, Fr.-W. Bach, Leibniz University Hanover

SESSION 4: TOOL MANUFACTURING

Improving the Cutting Ability of Cobalt-Bronze Matrix Impregnated Diamond Cutting Tools Using SiC Powders

A. Sokhansanj, A. M. Hadian, University of Tehran

An in situ diffraction study on cobalt feedstock material

A. Steffen, M. Paulus, M. Ferrelra, Ch. J. Sahle, W. Tillmann, M. Tolan, Technische Universität Dortmund, C. Kronholz, Benteler Tube Management GmbH
Highly Wear Resistant PM Bulk Coatings by Sintercladding.........................................................151

A Study of the Use of Encapsulated Diamond in the Cutting of Concrete.................................157
D. Egan, S. Melody, E. Brosnan, Element Six

Characterization of diamond tools fabricated by Spark Plasma Sintering and Spark Plasma Consolidation..................................................................................................................163

Electro Discharge Sintering – A new PM method to density wear resistant materials..................171
P. Schütte, H. Moll, W. Theisen, Ruhr University Bochum

Fundamentals, potential, and future prospective of spraying processes for the manufacturing of metal-bonded diamond grinding tools........................................................................177
W. Tillmann, J. Nebel, Technische Universität Dortmund

Low Temperature Joining of Segmented Tools for Cut off grinding by Adhesive Bonding Technology..........................................................................................................................185
M. Wirts-Rütters, B. Schneider, Fraunhofer-Institut für Fertigungstechnik und Angewandte Materialforschung, B. Denkena, B. Konopatzki, IFW, Leibniz Universität Hannover, R. Wloka, Institut für Werkzeugforschung und Werkstoffe Remscheid
