Message from the General Chair ................................................................. vi
Message from the Program Co-chairs ....................................................... vii
Organizing Committee .............................................................................. viii
Program Committee .................................................................................. x
Additional Reviewers ............................................................................... xi
Sponsors ..................................................................................................... xii

WORKSHOPS

Workshop on Intermediate Representations ............................................ xiii
Florent Bousche, Sebastian Hack, Eelco Visser
Workshop “analyse to compile, compiler to analyse” ................................ xiv
Laure Gomord (Université Lille-1 (LIFL)), David Monniaux (CNRS (VERIMAG))
First International Workshop on Polyhedral Compilation Techniques ....... xv
Christophe Alias (INRIA), Cédric Bastoul (U. of Paris-Sud)
Fifth Workshop on Statistical and Machine learning approaches to ARChitecture and compilation .................................................. xvi
François Bodin (CAPS Enterprise/IRISA)
Third International Workshop on GCC Research Opportunities .............. xvii
David Edelsam (IBM), Erven Rohou (IBM)
Third Workshop on Infrastructures for Software/Hardware co-design ....... xviii
Edson Borin (University of Campinas)
Workshop on Optimizations for DSP and Embedded Systems ............... xix
Tom Vander Aa (IMEC)

TUTORIALS

Array Building Blocks: A Dynamic Compiler for Data-parallel Heterogeneous Systems ................................................................. xx
Chris J. Newburn (Intel)
Building Dynamic Instrumentation Tools with DynamoRIO ................... xxi
Derek Bruening (Google), Qin Zhao (MIT)
Essential Abstractions in GCC ................................................................. xxii
Uday P. Khedker (IIT Bombay)
GPU Programming Models, Optimizations and Tuning .......................... xxiii
J. (Ram) Ramanujam (Louisiana State University), P. (Saday) Sadayappan (Ohio State University)
Detailed Pin! ............................................................................................ xxiv
Tevi Devor (Intel), Robert Cohn (Intel)
PIPS: An Interprocedural Extensible Source-to-Source Compiler Infrastructure for Code/Application Transformations and Instrumentations ........................................................................ xxv
Curinne Ancourt (Centre de Recherche en Informatique, MINES ParisTech), Serge Guelton (Telecom Bretagne/Info/HPCAS), Roman Keryell (CSO, HPC Project), Frederique Silber-Chaussumier (Telecom SudParis)
AlphaZ and the Polyhedral Equational Model ....................................... xxvi
S. Rajopadhye (Colorado State University)
Program Optimization through Loop Vectorization ................................ xxvii
Maria J Garzarán (UIUC), David Padua (UIUC)
Reconciling Compilers and Timing Analysis for Safety-Critical Real-Time Systems - the WCET-aware C Compiler WCC .................................................... xxviii
Heiko Falk (TU Dortmund), Peter Marwede (TU Dortmund)
Inside X10: Implementing a High-level Language on Distributed and Heterogeneous Platforms ................................................................. xxix
Olivier Tardieu (IBM Research), David Cunningham, Igor Peshansky (IBM Research)

KEYNOTES

The Language, Optimizer, and Tools Mess ............................................. xxx
Erik Altmann (IBM - T.J. Watson Research Center)
Xavier Leroy (INRIA Paris-Rocquencourt)
Low Level Code Optimization

**MAO - an Extensible Micro-Architectural Optimizer**
Robert Hundt (Google), Easwaran Raman (Google), Martin Thur e ss on (Google), Neil Vachharajani (Google)

**Phase-based Tuning for Better Utilization of Performance-Asymmetric Multicore Processors**
Tyler Sondag (Iowa State University), Hridesh Rajan (Iowa State University)

**Dynamic Register Promotion of Stack Variables**
Jianjun Li (Institute of Computing Technology, Chinese Academy of Sciences), Chenggang Wu (Institute of Computing Technology, Chinese Academy of Sciences), Wei-Chung Hau (National Chiao Tung University)

**Link-Time Optimization for Power Efficiency in a Tagless Instruction Cache**
Timothy Jones (University of Edinburgh), Sandro Bartolini (University of Siena), Jonas Muehl (Ghent University), Dominique Chanet (Technicolor)

Speculation and Transactional Memory

**The Runtime Abort Graph and its Application to Software Transactional Memory Optimization**
Dhruva Chakrabarti (Hewlett-Packard Laboratories), Prithviraj Banerjee (Hewlett-Packard Laboratories), Hans Boehm (Hewlett-Packard Laboratories), Pramod Joisha (Hewlett-Packard Laboratories), Robert Schreiber (Hewlett-Packard Laboratories)

**LAR-CC: Large Atomic Regions with Conditional Commits**
Edson Borin (University of Campinas), Youfeng Wu (Intel Labs), Mauricio Breternitz, Jr. (AMD), Cheng Wang (Intel Labs)

**Runtime Automatic Speculative Parallelization**
Ben Hertzberg (Stanford University), Kunle Olukotun (Stanford University)

**Dynamically Accelerating Client-side Web Applications through Decoupled Execution**
Mojtaba Mehrara (University of Michigan, Ann Arbor), Scott Mahlke (University of Michigan, Ann Arbor)

Language Support for Optimization

**Language and Compiler Support for Auto-Tuning Variable-Accuracy Algorithms**
Jason Ansel (Massachusetts Institute of Technology), Yee Lok Wong (Massachusetts Institute of Technology), Cy Chan (Massachusetts Institute of Technology), Marek Obzervski (Massachusetts Institute of Technology), Alan Edelman (Massachusetts Institute of Technology), Saman Amarasinghe (Massachusetts Institute of Technology)

**Automated Programmable Control and Parameterization of Compiler Optimizations**
Qing Yi (University of Texas at San Antonio)

**Extendable Pattern-Oriented Optimization Directives**
HuiMin Cui (Chinese Academy of Sciences), JingLing Xue (University of New South Wales), Lei Wang (Chinese Academy of Sciences), Yang Yang (Chinese Academy of Sciences), Xiaobing Feng (Chinese Academy of Sciences), Dongrui Fan (Chinese Academy of Sciences)

Vectorization and Parallelization

**Predictive Modeling in a Polyhedral Optimization Space**
Eunjung Park (University of Delaware), Louis-Noel Pouchet (The Ohio State University), John Cavazos (University of Delaware), Albert Cohen (INRIA Saclay), P. Sadayappan (The Ohio State University)

**Automatic parallelization of fine-grained meta-functions on a Chip Multiprocessor**
Sanghoon Lee (North Carolina State University), James Tuck (North Carolina State University)

**Whole-Function Vectorization**
Ralf Karrenberg (Saarland University), Sebastian Hack (Saarland University)

**Vapor SIMD: Auto-Vectorize Once, Run Everywhere**
Dorit Nuzman (IBM Haifa Research Lab), Sergei Dyshel (IBM Haifa Research Lab), Erven Rohou (INRIA Rennes), Ira Rosen (IBM Haifa Research Lab), Kevin Williams (INRIA Rennes), David Yuste (INRIA Rennes), Albert Cohen (INRIA Saclay), Ayal Zaks (IBM Haifa Research Lab)

Data Locality

**On-Chip Cache Hierarchy Aware Tile Scheduling for Multicore Machines**
Jun Liu (The Pennsylvania State University), Yuanrui Zhang (The Pennsylvania State University), Wei Ding (The Pennsylvania State University), Mohanur Kandemir (The Pennsylvania State University)

**Pinpointing Data Locality Problems Using Data-centric Analysis**
Xu Liu (Rice University), John Mellor-Crummey (Rice University)
Automated Locality Optimization based on the Reuse Distance of String Operations
Silvius Rus (Google), Raksit Ashok (Google India), David Xinliang Li (Google)

Neighborhood-Aware Data Locality Optimization for NoC-Based Multicores
Mahmut Kandemir (The Pennsylvania State University), Yuanrui Zhang (The Pennsylvania State University), Jun Liu (The Pennsylvania State University), Taylan Yemliha (Syracuse University)

Program Safety

AccuLock: Accurate and Efficient Detection of Data Races
Xinwei Xie (University of New South Wales), Jingling Xue (University of New South Wales)

Practical Memory Checking with Dr. Memory
Derek Bruening (Google), Qin Zhao (Massachusetts Institute of Technology)

Dynamic Compilation

Intel's Array Building Blocks: A Retargetable, Dynamic Compiler and Embedded Language
Chris J. Newburn (Intel Corporation), Byoungro So (Intel Corporation), Zhenying Liu (Intel Corporation), Michael McCool (Intel Corporation), Anwar Ghulam (Intel Corporation), Stefanus Du Toit (Intel Corporation), Zhi Gang Wang (Intel Corporation), Zhao Hui Du (Intel Corporation), Yongjian Chen (Intel Corporation), Peng Guo (Intel Corporation), Zhanglin Liu (Intel Corporation), Dan Zhang (Intel Corporation)

A HW/SW Co-designed Multi-Core Virtual Machine for Energy-Efficient General Purpose Computing
Youfeng Wu (Intel Labs), Shiliang Hu (Intel Labs), Edson Borin (University of Campinas), Cheng Wang (Intel Labs)

A Trace-based Java JIT Compiler Retrofitted from a Method-based Compiler
Hiroshi Inoue (IBM Research), Hiroshige Hayashizaki (IBM Research), Peng Wu (IBM Research), Toshio Nakatani (IBM Research)

Using Machines to Learn Method-Specific Compilation Strategies
Ricardo Nabinger Sanchez (University of Alberta), Jose Nelson Amaral (University of Alberta), Duane Szafron (University of Alberta), Marius Pirvu (IBM Toronto Software Laboratory), Mark Stoodley (IBM Toronto Software Laboratory)

Program Analysis

Prioritizing Constraint Evaluation for Efficient Points-to Analysis
Rupesh Nasre (Indian Institute of Science), R Govindarajan (Indian Institute of Science)

Highly Scalable Distributed Dataflow Analysis
Joseph L. Greathouse (University of Michigan, Ann Arbor), Chelsea LeBlanc (University of Michigan, Ann Arbor), Todd Austin (University of Michigan, Ann Arbor), Valeria Bertacco (University of Michigan, Ann Arbor)

Flow-Sensitive Pointer Analysis for Millions of Lines of Code
Ben Hardekopf (University of California, Santa Barbara), Calvin Lin (The University of Texas at Austin)
