Preface ................................................................. ix

1. Introduction to the Rotational Moulding Process ......................... 1
   1.1 Introduction ...................................................... 1
   1.2 The Rotational Moulding Process .................................. 5
   1.3 Overview of Rotational Moulding ................................... 11
   1.4 Special Nature of Rotational Moulding .............................. 13
   1.5 Advantages of Rotational Moulding .................................. 15
   1.6 Disadvantages of Rotational Moulding ............................... 17
   1.7 Common Applications for Rotomoulded Products ..................... 17
      1.7.1 Material Handling Products .................................... 18
      1.7.2 Industrial Products ............................................ 18
      1.7.3 Environmental Products ........................................ 19
      1.7.4 Leisure Products ............................................... 19
      1.7.5 Marine Products ............................................... 20
      1.7.6 Road Signage .................................................. 20

2. Moulds ....................................................................... 21
   2.1 Introduction .................................................................. 21
   2.2 Mould Materials ........................................................ 22
   2.3 Sheet Steel .............................................................. 23
   2.4 Aluminium .............................................................. 23
      2.4.1 The Aluminium Casting Process ................................. 24
   2.5 Electroformed Nickel ................................................... 25
   2.6 Comparison between Mould Materials ............................... 26
# Practical Guide to Rotational Moulding

2.7 Mould Design .................................................................................................................. 27
  2.7.1 Mould Frame ........................................................................................................... 29
  2.7.2 Moulded-in Inserts ................................................................................................. 30
2.8 Moulded-in Structural Components ........................................................................... 34
2.9 Temporary Inserts ......................................................................................................... 36
2.10 Threads ........................................................................................................................ 37
2.11 Mould Clamps ............................................................................................................. 38
2.12 Mould Guides and Hinges .......................................................................................... 41
2.13 Automatic Mould Movement ...................................................................................... 44
2.14 Mould Venting ............................................................................................................ 46
2.15 Automatic Venting ...................................................................................................... 47
2.16 Mould Surface Finish ................................................................................................ 50
2.17 Mould Outer Surface – Heat Transfer Enhancement .................................................. 51
2.18 Mould Shielding (Internal) .......................................................................................... 53
2.19 Mould Shielding (External) ........................................................................................ 54
2.20 Mould Release ............................................................................................................. 55
  2.20.1 Mould Preparation for Release Agent ................................................................. 56
  2.20.2 Reactive Systems ................................................................................................ 57
    2.20.2.1 Spray-on Zinc Stearates .................................................................................. 57
    2.20.2.2 Silicones .......................................................................................................... 57
    2.20.2.3 Disiloxanes ...................................................................................................... 57
  2.20.3 Conventional Systems ......................................................................................... 58
  2.20.4 Permanent Systems .............................................................................................. 58
  2.20.5 Hybrid Release Systems ...................................................................................... 60
2.21 Moulding Aids ............................................................................................................ 60
2.22 Airflow Amplification ................................................................................................. 69

3. Rotational Moulding Machinery .................................................................................... 73
  3.1 Introduction .................................................................................................................. 73
  3.2 Types of Rotational Moulding Machines ..................................................................... 73
    3.2.1 Carousel Machines ............................................................................................. 74
    3.2.2 Shuttle Machines ................................................................................................ 76
    3.2.3 Clamshell Machines ............................................................................................ 77
    3.2.4 Rock and Roll Machines .................................................................................... 79

4.8 Other Plastics ................................................................. 126
4.9 Additives Used in Rotational Moulding Materials ...................... 127
  4.9.1 Fillers ................................................................. 127
  4.9.2 Plasticisers ........................................................... 128
  4.9.3 Lubricants ............................................................ 128
  4.9.4 Stabilisers ............................................................ 128
  4.9.5 Anti-oxidants ....................................................... 129
  4.9.6 Ultraviolet Stabilisers ........................................... 129
  4.9.7 Flame Retardants .................................................. 129
  4.9.8 Crosslinking Agents ............................................. 130
  4.9.9 Foaming or Blowing Agents .................................... 130
  4.9.10 Chemical Blowing Agent Technology .......................... 133
  4.9.11 Pigments ........................................................... 137
4.10 Powders for Rotational Moulding – Grinding/Pulverising .......... 138
  4.10.1 Introduction .......................................................... 138
4.11 Particle Size Distribution ............................................. 142
4.12 Dry Flow ................................................................. 145
4.13 Bulk Density .................................................................. 146
4.14 Factors Affecting Powder Quality ...................................... 147
  4.14.1 Gap Size .............................................................. 148
  4.14.2 Number of Mill Teeth ............................................ 148
  4.14.3 Grinding Temperature ........................................... 149
4.15 Other Techniques for Analysing Powders for Rotational Moulding. 150
  4.15.1 Powder Shape and Size .......................................... 151
  4.15.2 Melting Parameters .............................................. 154
4.16 Micropelletising .......................................................... 156
4.17 Colouring of Plastics for Rotational Moulding ........................ 159
4.18 Types of Pigments ....................................................... 162
  4.18.1 Pigment Selection Criteria ..................................... 164
5. Design for Functionality ...................................................... 167
  5.1 Introduction .................................................................. 167
  5.2 Preliminary Design Considerations .................................. 168
  5.3 Material ...................................................................... 168
Contents

5.4 Number of Parts ................................................................. 169
5.5 Size of Moulds ................................................................. 170
5.6 Part Complexity ................................................................. 171
5.7 Wall Thickness Distribution ................................................ 173
5.8 Tolerances and Shrinkage .................................................. 177
  5.8.1 Shrinkage Guidelines .................................................... 178
  5.8.2 Control of Shrinkage ..................................................... 178
  5.8.3 Effect of Release Point on Shrinkage ................................. 179
  5.8.4 Other Factors Affecting Shrinkage ................................... 180
5.9 Warpage ............................................................................. 181
  5.9.1 Control of Warpage ......................................................... 183
5.10 Residual Stress ................................................................. 185
  5.10.1 Short-term Effects of Residual Stresses .............................. 188
  5.10.2 Long-term Effects of Residual Stresses .............................. 188
  5.10.3 Cures for Residual Stress Problems ................................. 189
5.11 Stiffening of Parts ............................................................. 190
5.12 Double Walled Parts .......................................................... 191
5.13 Corner Radii ..................................................................... 192
5.14 Draft Angles .................................................................... 192
5.15 Surface Quality ................................................................. 192
5.16 Surface Texture ................................................................. 194
5.17 Graphics and Surface Decoration ........................................ 195
  5.17.1 Painting ........................................................................ 195
  5.17.2 Hot Stamping ................................................................. 197
  5.17.3 Adhesives .................................................................... 197
  5.17.4 In-mould Decoration ..................................................... 197
  5.17.5 Post Moulding Decoration .............................................. 200
5.18 Design of Foamed Sections ................................................ 202
  5.18.1 Solid/Foam Cross-sections .............................................. 203
  5.18.2 Solid/Foam/Solid Cross-sections ..................................... 204
6. The Future for Rotational Moulding ..................................... 205
  6.1 Materials ......................................................................... 205
  6.2 Moulds ............................................................................. 207
