

**“Electro-chemo-mechanical manipulations of clays regarding the clogging  
during EPB-tunnel driving”**

Von der Fakultät für Georessourcen und Materialtechnik  
der Rheinisch-Westfälischen Technischen Hochschule Aachen

zur Erlangung des akademischen Grades eines  
Doktors der Naturwissenschaften

genehmigte Dissertation  
vorgelegt von **Laurea Specialistica**

**Giovanni Spagnoli**

aus Foggia

**Berichter: Univ.-Prof. Dr.rer.nat. Dr. h.c. (USST) Rafiq Azzam**

**Univ.-Prof. Dr.rer.nat. Helge Stanjek**

Tag der mündlichen Prüfung: 28. Oktober 2011

## List of contents

List of figures	XIII
List of tables	XVII
List of abbreviations	XIX
Nomenclature	XXI
<b>1 Introduction</b>	<b>1</b>
1.1 Earth Pressure Balance Machine	1
1.2 The clogging problem of TBM in clays	2
1.3 The project INPROTUNNEL	6
<b>2 Literature review</b>	<b>9</b>
2.1 Typical soil conditioning for EPB	9
2.1.1 Incoherent soils with fines content	10
2.1.2 Cohesive soils	10
2.2 Literature overview of clogging in geotechnical practice	13
2.3 Impact of soil conditioning on the front stability of an EPB	15
2.4 Adhesion tests in literature	16
2.5 Alternative ways to treat the materials	23
<b>3 Chemo-mechanical properties of the clays</b>	<b>25</b>
3.1 Introduction	25
3.2 Samples characterization	28
3.3 Influence of the dielectric constant, electrolyte concentration and ph of pore fluids	29
3.3.1 Mechanism controlling the Atterberg limits of clays	29
3.3.2 Mathematical model describing the variation of dielectric constant of the solid and liquid medium	35
3.3.3 Optical microscope investigations	36
3.3.4 XRD measurements for different pore fluids	37
3.3.5 Potential computation according to the Stern theory	38
3.3.6 Influence of pH of pore fluids	40
3.3.7 Undrained shear strength of clays mixed with different pore fluids	42
3.4 Computation of the attractive and repulsive forces	48
3.4.1 Attractive forces	49
3.4.2 Repulsive forces	51
3.5 Influence of quartz powder on the mechanical behaviour of smectite	54
<b>4 Electrical characterization of the clays</b>	<b>59</b>
4.1 Zeta potential measurements by means of the CVI technique	59
4.1.1 Principles of electro-acoustic technique	61

4.1.2	Laboratory results.....	62
4.2	Principles of electro-osmosis.....	65
4.3	Electro-osmotic flow tests .....	67
4.3.1	Voltage measurements coupled with pressure measurements.....	67
4.3.2	Results .....	69
4.3.3	Flow measurements with different voltage application.....	71
4.3.4	Preliminary results .....	72
4.3.5	Main results.....	77
4.3.6	$\zeta$ -potential modeling using the triple layer model .....	83
<b>5</b>	<b>Manipulation of clogging in the laboratory.....</b>	<b>87</b>
5.1	Laboratory characterization of clays from tunnel projects with clogging problems.....	87
5.2	The sticky point .....	90
5.3	Modified direct shear tests .....	91
5.4	Tilted plate tests.....	93
5.4.1	Results.....	96
5.4.2	ESS model for the tilted plate tests. ....	98
5.5	Cone pull-out test.....	103
5.5.1	Modification of clogging by using electro-osmosis. ....	106
5.5.2	Modification of clogging by using different electrolytes. ....	108
5.5.2.1	Smectite – quartz powder mixture .....	109
5.5.2.2	Boom and Ypresian Clay.....	113
<b>6</b>	<b>Conclusions and proposal for the future .....</b>	<b>115</b>
	<b>Bibliography.....</b>	<b>121</b>
A	Grain size curves .....	131
B	XRD .....	133
C	Pressure / Voltage results .....	139
D	Boom and Ypresian Clays.....	141
E	Tensile stress .....	143
