1. Basic Information about Tomatoes and the Tomato Group  
Ana Caicedo and Iris Peralta

1.1 Introduction 2
1.2 Economic and Nutritional Importance of Tomato 2
   1.2.1 Economic Importance 2
   1.2.2 Nutritional Composition 3
1.3 Academic Importance of Tomato and its Wild Relatives 5
   1.3.1 Tomato as a Model Species 5
      1.3.1.1 The Genetic Basis of Quantitative Traits 6
      1.3.1.2 Fruit Development 6
   1.3.2 The Tomato Clade as a Model System 7
      1.3.2.1 Plant Defense 7
      1.3.2.2 Mating System and Speciation 8
      1.3.2.3 Adaptation and Divergence 8
1.4 Taxonomy and Evolution 9
   1.4.1 Taxonomic Position and Phylogenetic Relationships 9
1.5 Botanical Descriptions 13
   1.5.1 Morphology 13
   1.5.2 Ploidy Levels, Genome Size and Karyotype 16
1.6 Ecology and Biodiversity of the Tomato Clade 17
   1.6.1 Distribution and Habitats 17
   1.6.2 Mating System Evolution in the Tomato Clade 18
      1.6.2.1 Mating System Diversity 18
      1.6.2.2 The Genetic Basis of Mating System Diversity 19
   1.6.3 Genetic Diversity in Wild Tomatoes 20
      1.6.3.1 Genetic Diversity and Mating System 20
      1.6.3.2 Genetic Diversity and Geography in SI Species 21
      1.6.3.3 Genetic Diversity and Geography in SC Species 22
3. Diversity within Cultivated Tomato 74
   Esther van der Knaap, Claire Anderson and Gustavo Rodriguez
   3.1 Introduction 74
   3.2 Phenotypic Analysis of Tomato Fruit 77
   3.3 The Effect of the Tomato Shape Genes on Fruit Morphology 80
   3.4 Genotype-Based Diversity Analysis 82
   3.5 Genetic Diversity within Cultivated Tomato Germplasm 83
   3.6 Future Prospects 87
   Acknowledgements 88
   References 88

4. Molecular Markers, Genetic Maps and Association Studies in Tomato 92
   Martin W. Ganal
   4.1 Introduction 92
   4.2 Molecular Markers for Tomato Genome Mapping and Marker/Trait Association Studies 94
      4.2.1 RFLPs and RFLP-based PCR Markers 95
      4.2.2 PCR-based Anonymous Markers 95
      4.2.3 Microsatellite or SSR Markers 96
      4.2.4 Single Nucleotide Polymorphism (SNP) Markers 97
   4.3 Genetic Maps and Available Markers 97
   4.4 Population Structure, Linkage Disequilibrium and Association of Markers and Traits 98
      4.4.1 Population Structure in Tomato 98
      4.4.2 Linkage Disequilibrium 99
      4.4.3 First Efforts towards Association Mapping in Tomato 100
      4.4.4 Candidate Gene Analysis 100
   4.5 Future Developments 101
      4.5.1 Requirements on Markers for Marker/Trait Associations 101
      4.5.2 Large Scale SNP Identification for Marker/Trait Associations 102
      4.5.3 Genome-wide Association Studies 103
      4.5.4 The Future—The Tomato Genome Sequence, Large Scale Phenotyping and Association Studies 104
   Acknowledgements 105
   References 105

5. Mapping and Tagging of Simply Inherited Traits 109
   Ilan Levin and Arthur A. Schaffer
   5.1 Introduction 110
6.9.3.3 Salt Tolerance 189
6.9.4 Fruit Yield 191
6.9.5 Fruit Quality 192
6.9.5.1 Fruit Weight 193
6.9.5.2 Fruit Shape 194
6.9.5.3 Fruit Color 196
6.9.5.4 Fruit Firmness 197
6.9.5.5 Primary Metabolic Traits 198
6.9.5.6 Sugar and Acid Content 199
6.9.5.7 Nutritional and Antioxidant Compounds 201
6.9.5.8 Volatile Compounds 203
6.9.5.9 Sensory Traits 205
6.9.6 Flowering and Ripening Time 206
6.9.7 Flower Morphology and Reproductive Barriers 207
6.9.8 Leaf, Sepal, and Petal Morphology 209
6.9.9 Seed Weight 210
6.10 Conclusions and Future Prospects 211
Acknowledgments 212
References 213

7. Molecular Breeding 228
Emidio Sabatini, Massimiliano Beretta, Tea Sala,
Nazareno Acciarri, Justyna Mile and Nicola Pecchioni

7.1 Introduction 229
7.2 Germplasm Characterization and Exploitation 230
7.2.1 Pre-breeding 231
7.2.2 Testing for Distinctness, Uniformity and Stability (DUS) 237
7.2.3 Hybrid Purity Testing 238
7.3 Marker-Assisted Trait Introgression 239
7.3.1 Gene and QTL Introgression 239
7.3.2 Gene Pyramiding 261
7.3.3 Genetic Ideotype Breeding 265
7.4 Advantages, Limitations and Prospects of MAS 266
7.4.1 Advantages 267
7.4.2 Limitations and Solutions 268
7.4.2.1 Unavailability of Closely-linked Markers for Many Traits 270
7.4.3 Prospects for MAS 271
7.4.3.1 From “MAS” to “GAS” 272
7.5 Transgenic Breeding 275
7.5.1 Traits and Objectives 279
7.5.1.1 Sugars 279
7.5.1.2 Carotenoids 280
10. The Tomato Genome Sequencing Project

Lukas A. Mueller

10.1 Introduction

10.2 Sequencing Strategy
   10.2.1 BAC by BAC Approach
   10.2.2 Whole Genome Shotgun

10.3 Genome Annotation by ITAG

10.4 Conclusion

Acknowledgments

11. Comparative Genome Sequencing of Tomato and Potato: Methods and Analysis

Sanwen Huang and Zhong-hua Zhang

11.1 Introduction

11.2 A Pipeline for the Comparative Sequencing of Tomato and Potato Genomes

11.3 Advantages of Comparative Genome Sequencing
   11.3.1 Improving the Physical Maps
   11.3.2 Selecting Additional Seed BACs
   11.3.3 Benefits to BAC Finishing

11.4 Comparative Analysis of Syntenic Clones Obtained from Comparative Sequencing
   11.4.1 Characterization of Syntenic Sequences
   11.4.2 Colinearity between Tomato and Potato
   11.4.3 Content and Distribution of Repetitive Elements
   11.4.4 Inserted or Deleted (indel) Genes within Syntenic Regions
   11.4.5 Divergence of Synteny Length between Tomato and Potato

11.5 Limitations and Opportunities

12. Developments in Tomato Transcriptomics

Antonio J. Matas, Zhangjun Fei, James J. Giovannoni and Jocelyn K.C. Rose

12.1 Introduction

12.2 Transcriptomics Tools Developed
   12.2.1 Microarrays
   12.2.2 SAGE and Related Technologies
   12.2.3 Massive Parallel Signature Sequencing

References
12.3 Advances in Sequencing Technologies
   12.3.1 454 Genome Sequencer FLX
   12.3.2 Illumina
   12.3.3 ABI Solid Sequencing
   12.3.4 Third Generation and other Sequencing Technologies
   12.3.5 RNA-Seq

12.4 Bioinformatic Challenges and Data Analysis

12.5 Use of Related Species Resources

12.6 Application of Functional Genomics in Genomics-Assisted Breeding

12.7 Summary

13. Proteomics and Metabolomics

Mireille Faurobert, Yoko Iijima and Koh Aoki

13.1 Introduction

13.2 Tomato Proteomics: Techniques, Applications, and QTL Analyses
   13.2.1 Proteomics Methods
      13.2.1.1 Protein Extraction
      13.2.1.2 Traditional 2DE-based Methods
      13.2.1.3 Mass Spectrometry
      13.2.1.4 Shotgun Proteomics
      13.2.1.5 Analysis of Post-translational Modifications
      13.2.1.6 Protein Complexes

   13.2.2 Application of Proteomics to Functional Studies
      13.2.2.1 Fruit Development and Ripening
      13.2.2.2 Abiotic Stress
      13.2.2.3 Biotic Stress

   13.2.3 Proteomics and QTL Mapping
      13.2.3.1 Pathogen Resistance
      13.2.3.2 Fruit Quality Traits

13.3 Tomato Metabolomics: Techniques, Applications, and QTL Analyses
   13.3.1 Metabolomics Tools
      13.3.1.1 Metabolite Extraction
      13.3.1.2 GC-MS
      13.3.1.3 LC-MS
      13.3.1.4 CE-MS
      13.3.1.5 NMR
      13.3.1.6 Analytical Strategies
13.3.2 Application of Metabolomics to Functional Studies 416

13.3.2.1 Comprehensive Analysis of Tomato Fruit Metabolites 416

13.3.2.2 Tissue-dependent Accumulation of Metabolites 416

13.3.2.3 Metabolome Analysis in Transgenic Tomato Plants 417

13.3.3 Metabolomics and QTL Mapping 418

13.3.3.1 Metabolic Profiling of Wild Species 418

13.3.3.2 Metabolic Profiling of ILs between S. pennellii and S. lycopersicum 418

13.4 Application in Phenomics-Assisted Breeding 419

13.4.1 Integrated -omics 419

13.4.2 Databases 420
