Contributor contact details
Foreword
Introduction

Part I Diffusionless transformations

1 Crystallography of martensite transformations in steels
P. M. Kelly, The University of Queensland, Australia
1.1 Introduction
1.2 Martensite transformations in steels
1.3 Phenomenological theory of martensite crystallography (PTMC)
1.4 The post phenomenological theory of martensite crystallography (PTMC) period
1.5 Strain energy – the Eshelby/Christian model and the infinitesimal deformation (ID) approach
1.6 Interfacial dislocation models
1.7 Future trends
1.8 Conclusions
1.9 References

2 Morphology and substructure of martensite in steels
T. Maki, Kyoto University, Japan
2.1 Morphology and crystallographic features of martensite in ferrous alloys
2.2 Morphology and substructure of lath martensite
2.3 Morphology and substructure of lenticular martensite
2.4 Morphology and substructure of thin plate martensite
2.5 Conclusions
2.6 References

Contents

3 Kinetics of martensite transformations in steels 59
G. B. OLSON and Z. D. FEINBERG, Northwestern University, USA

3.1 Introduction 59
3.2 Mechanism and kinetics of martensitic transformation 60
3.3 Mechanically induced transformations 63
3.4 Transformation plasticity constitutive relations and applications 66
3.5 Conclusions 79
3.6 References 80

4 Shape memory in ferrous alloys 83
D. DUNNE, University of Wollongong, Australia

4.1 Introduction 83
4.2 Fe-Pt alloys 89
4.3 Fe-Ni and Fe-Ni-C alloys 93
4.4 Fe-Ni-Co-based alloys 96
4.5 Austenitic stainless steels with low stacking fault energy (SFE) 99
4.6 Fe-Mn-based alloys 100
4.7 Summary 115
4.8 Acknowledgements 118
4.9 References 118

5 Tempering of martensite in carbon steels 126
G. KRAUSS, Colorado School of Mines, USA

5.1 Introduction 126
5.2 Martensitic microstructures prior to tempering heat treatments 127
5.3 Classification of aging and tempering stages: general considerations 130
5.4 Changes in martensitic fine structure due to aging 131
5.5 The stages of tempering 132
5.6 Conclusions 145
5.7 References 145

Part II Phase transformations in high strength steels 151

6 Phase transformations in microalloyed high strength low alloy (HSLA) steels 153
R. C. COCHRANE, University of Leeds, UK

6.1 Introduction to microalloyed high strength low alloy (HSLA) steels 153

9.4 Conclusions and future trends 290  
9.5 Acknowledgement 291  
9.6 References 291  

10 Phase transformations in high manganese twinning-induced plasticity (TWIP) steels  295  
B. C. De Cooman, Pohang University of Science and Technology, South Korea  
10.1 Introduction 295  
10.2 Fe-Mn-X alloys 297  
10.3 Strain-induced twinning 307  
10.4 Twinning-induced plasticity (TWIP) industrialization 327  
10.5 Conclusions 327  
10.6 Acknowledgements 328  
10.7 References 328  

11 Phase transformations in maraging steels  332  
W. Sha, Queen’s University Belfast, UK, H. Leitner, University of Leoben, Austria, Z. Guo, Sente Software Ltd, UK and W. Xu, ArcelorMittal Global R&D Gent, Belgium  
11.1 State of the art of ultra high strength steels 332  
11.2 Types of maraging steels 334  
11.3 Microstructure and precipitates in maraging steels 339  
11.4 Reverted austenite and mechanical properties 342  
11.5 Evolution of precipitates and the overall process 346  
11.6 Precipitation kinetic theory in Fe-12Ni-6Mn maraging type alloy 349  
11.7 Research trends 356  
11.8 References 359  

Part III Modelling phase transformations  363  
12 First principles in modelling phase transformations in steels 365  
M. H. F. Sluiter, Delft University of Technology, The Netherlands  
12.1 Introduction 365  
12.2 *Ab initio* description of phase stability of pure iron 370  
12.3 *Ab initio* phase stability of iron carbides 374  
12.4 Substitutional alloying elements 377  
12.5 *Ab initio* description of diffusivity in bcc Fe 381  
12.6 Future trends 384  
12.7 References 385

13 Phase field modelling of phase transformations in steels
M. Militzer, The University of British Columbia, Canada

13.1 Introduction
13.2 Phase field methodology
13.3 Austenite formation
13.4 Austenite decomposition
13.5 Future trends
13.6 References

14 Molecular dynamics modeling of martensitic transformations in steels
H. M. Urbassek and L. Sandoval, Universität Kaiserslautern, Germany

14.1 Introduction
14.2 Interatomic interaction potentials
14.3 Martensitic transformations in iron: case studies
14.4 Transformations in ferrous nanosystems
14.5 Conclusions and future trends
14.6 Acknowledgement
14.7 References

15 Neural networks modeling of phase transformations in steels
C. Capdevila, National Centre for Metallurgical Research (CENIM-CSIC), Spain

15.1 Introduction
15.2 Essence of the method
15.3 On the quest of critical temperatures
15.4 Determining microstructural parameters
15.5 Development of continuous cooling transformation (CCT) diagrams
15.6 Conclusions and future trends
15.7 References

Part IV Advanced analytical techniques for studying phase transformations in steels

16 Application of modern transmission electron microscopy (TEM) techniques to the study of phase transformations in steels
D. Boyd and Z. Yao, Queen's University, Canada
