### Keynotes

The Design Principle of the Robust Communication System under the Great Disaster Environment ................................................................. 1  
*Shoichi Noguchi*

High Performance Database Processing ................................................................. 5  
*David Taniar*

Data Replication and Synchronization in P2P Collaborative Systems .......................... 7  
*Fatos Xhafa*

### Session 1A: Internet Computing and Web Applications

Malicious Software Detection Using Multiple Sequence Alignment and Data Mining ................................................................. 8  
*Yi Chen, Ajit Narayanan, Shaoning Pong, and Ban Tao*

Elastic Application Container: A Lightweight Approach for Cloud Resource Provisioning ................................................................. 15  
*Sijin He, Li Guo, Yike Guo, Chao Wu, Moustafa Ghanem, and Rui Han*

ADEC: Assured Deletion and Verifiable Version Control for Cloud Storage .......................... 23  
*Shin Tezuka, Ryuya Uda, and Kenichi Okada*
A Distributed Service Framework for Integrating Robots with Internet Services ................................................................. 31
Sachiko Nakagawa, Naoto Ohyama, Kazuaki Sakaguchi, Hisashi Nakayama,
Noboru Igarashi, Ryota Tsunoda, Shogo Shimizu, Masahiko Narita, and Yuka Kato

Session 1B: Wireless Mesh Networks
A Rate Adaptive Admission Control Protocol for Multimedia Wireless Mesh Networks .................................................................................................................. 38
Sanjay Kumar Dhurandher, Isaac Woungang, Kirti Kumar, Mamta Joshi,
and Monika Verma
Dynamic Link Quality Aware Routing Protocol for Multi-radio Wireless Mesh Networks .................................................................................................................. 44
Byoungheon Shin, Seon Yeong Han, and Dongman Lee
Energy-Aware Link Scheduling Algorithms to Maximize Life Cycle of Relay Nodes on IEEE 802.16e Mesh Networks .............................................................................. 51
Chien-Yu Wu, Hann-Jang Ho, Sing-Ling Lee, and Shu-Jye Chang
Analysis and Countermeasure for Wormhole Attacks in Wireless Mesh Networks on a Real Testbed .................................................................................................................. 59
Jie Zhou, Jianmeng Cao, Jun Zhang, Chisheng Zhang, and Yao Yu

Session 1C: Dependable and Fault Tolerant Systems
Design and Implementation of Mesh RAID with Multiple Parities in Virtual Large-Scale Disks .................................................................................................................. 67
Minoru Uehara
Implementing Virtual Machine Replication: A Case Study Using Xen and KVM .................................................................................................................. 73
Darko Petrovic and André Schiper
A Diversity-Based Approach for Managing Faults in Web Services .................................................................................................................. 81
Hanane Abdeldjelil, Noura Faci, Zakaria Maamar, and Djamel Benslimane
A Large Scale Robust Disaster Information System Based on Never Die Network .................................................................................................................. 89
Noriki Uchida, Kazuo Takahata, Yoshitaka Shibata, and Norio Shiratori

Session 2A: Vehicular Networks and Applications
The Proactive Member-Centric Routing Protocol Using the Several Strategy (PMCS) for the Fleet Scenario in the Hybrid VANET .................................................................................. 97
Chung-Ming Huang, Tzu-Hua Lin, and Cheng-Hsiu Chang
Abiding Regional Data Distribution Using Relay and Random Network Coding on VANETs .................................................................................................................. 105
Naruhiro Kusumine and Susumu Ishihara
Optimal Phase Ordering of Traffic Signals to Reduce Stopped Delay .................................................................................................................. 113
Jason Barnes and Vamsi Paruchuri
Session 2B: Energy-Efficient Wireless Networks

Energy-Efficient Update Protocols for Mobile User Context
Stefan Fößl, Klaus Herrmann, and Kurt Rothermel

TARS: An Energy-Efficient Routing Scheme for Wireless Sensor Networks
with Mobile Sinks and Targets
Yuan-Po Chi and Hsung-Pin Chang

PSense: Reducing Energy Consumption in Public Sensing Systems
Patrick Baier, Frank Dürre, and Kurt Rothermel

Session 2C: Intelligent Systems and Applications

On-demand Data Numerosity Reduction for Learning Artifacts
Khamisi Kalegele, Hideyuki Takahashi, Johan Sveholm, Kazuto Sasai, Gen Kitagata, and Tetsuo Kinoshita

Fuzzy-Based Actuators Controlling for Minimizing Power Consumption in Cyber-physical System
Sheng-Tzong Cheng and Ju-Hsien Chou

Combination of Multiple Retrieval Systems Using Rank-Score Function and Cognitive Diversity
Hongzhi Liu, Zhonghai Wu, and D. Frank Hsu

Session 3A: Distributed Database and Data Mining

MIXED-LSH: Reduction of Remote Accesses in Distributed Locality-Sensitive Hashing Based on L1-distance
Hisashi Koga, Masayuki Oguri, and Toshinori Watanabe

Auto Determining Parameters in Class-Association Mining
Viet Phan-Luong

Recommendation of More Interests Based on Collaborative Filtering
Qian Wu, Feilong Tang, Li Li, Leonard Barolli, Ilsun You, Yi Luo, and Huakang Li

An Interactive Region-Based Filter for Moving Objects Datasets: Making Sense of Chaos
Jason Thompson, Wenny Rahayu, and Torab Torabi

Session 3B: Communication Protocols

A Channel Quality Aware Algorithm for IEEE 802.16 Uplink Burst Construction
Yuan-Cheng Lai, Yen-Hung Chen, and Ching-Neng Lai
Session 3C: Pervasive/Ubiquitous Computing and Services

Uncertain Low Penetration Rate—A Practical Issue in Mobile Intelligent Transportation Systems ........................................... 237
  Quang Tran Minh, Muhammad Ariff Baharudin, and Eiji Kamioka

How Does Mobile Context Affect People’s Web Search Behavior?: A Diary Study of Mobile Information Needs and Search Behaviors .................................................. 245
  Daijiro Komaki, Takahiro Hara, and Shojiro Nishio

On Co-scheduling of Periodic Update and Application Transactions with Fixed Priority Assignment for Real-Time Monitoring .................................................. 253
  Jiantao Wang, Kam-yiu Lam, Song Han, Sang H. Son, and Aloysius K. Mok

A Wireless LAN Location Estimation System Using Center of Gravity as an Algorithm Selector for Enhancing Location Estimation .................................................. 261
  Quan Jia Cheng, Joseph Kee-Yin Ng, and Kevin Chin Yiu Shum

Session 4A: Intelligent Computing and Networks

A Quantum Genetic Algorithm for Operon Prediction .................................................. 269
  Li-Yeh Chuang, Yi-Cheng Chiang, and Cheng-Hong Yang

Layer Partitioned Search Tree for Packet Classification .................................................. 276
  Yeim-Kuan Chong and Chao-Yen Chien

Chaos Embedded Particle Swarm Optimization for Tag Single Nucleotide Polymorphism Selection .................................................. 283
  Li-Yeh Chuang, Wei-Li Huang, and Cheng-Hong Yang

Mixed Observability Markov Decision Processes for Overall Network Performance Optimization in Wireless Sensor Networks .................................................. 289
  Daniel L. Kovacs, Wuyungerile Li, Naoki Fukuta, and Takashi Watanabe

Session 4B: Communication Systems

Evaluation of Genetic Algorithms for Single Ground Station Scheduling Problem .................................................. 299
  Fatos Xhafa, Junzi Sun, Admir Barolli, Makoto Takizawa, and Kazunori Uchida
Session 4C: Distributed Systems and Networking

Trying to Unify the LL/SC Synchronization Primitive and the Notion of a Timed Register ............................................................... 326
  Damien Imbs and Michel Raynal

Experimental Evaluation of Alkaline Batteries's Capacity for Low Power Consuming Applications ......................................................... 331
  Konstantin Mikhaylov and Jouni Tervonen

Time-Dependent Execution Pattern .................................................... 338
  Markus Aleksy and Axel Korthaus

Realizing Global Synchronizations for Locally-Connected Two-Dimensional Rectangle Cellular Arrays ................................................. 344
  Hiroshi Umeo

Session 5A: Semantics Computing and Networks

A Semantic Framework for the Management of Enriched Provenance Logs .................................................................................. 352
  Mohamed Amin Sakka, Bruno Defude, and Jorge Tellez

Goal-Based Policies for Self-Protecting Systems ..................................... 360
  Julian Schütte

Semantic Uplift of Monitoring Data to Select Policies to Manage Home Area Networks ............................................................... 368
  Annie Ibrahim Rana and Brendan Jennings

Semantics-Aware Storage and Replication of Trust Metadata in Mobile Ad-hoc Networks ................................................................. 376
  Vivek Natarajan, Sencun Zhu, Mudhakar Srivatsa, and Jeff Opper

Session 5B: Ad Hoc Networks and Routing

Evaluation of a MANET Testbed in Outdoor Bridge Environment Using BATMAN Routing Protocol ......................................................... 384
  Elis Kulla, Makoto Ikeda, Tetsuya Oda, Leonard Barolli, Fatos Xhafa, and Aleksander Biberaj

Efficient Route Discovery and Repair in Mobile Ad-hoc Networks ............. 391
  Po-Jen Chuang, Po-Hsun Yen, and Ting-Yi Chu
Session 5C: P2P Networks and Applications

File Management in a Mobile DHT-based P2P Environment .................................................. 415
   Khalid Ashraf, Rachid Anane, and Behzad Bordbar

Collaborative Admission Control Scheme for Group-Based P2P Contents Sharing Systems ................................................................. 423
   Kazuma Kadowaki and Satoshi Fujita

On Randomness in ISP-friendly P2P Applications ................................................................. 431
   S.M. Saif Shams, Paal E. Engelstad, and Amund Kvalbein

Optimized Range Queries for Large Scale Networks .............................................................. 438
   Nicolas Hidalgo, Erika Rosas, Luciana Arantes, Olivier Marin, Pierre Sens, and Xavier Bonnaire

Session 6A: Wireless Sensor Networks and Applications

A Scalable WSN Based Data Center Monitoring Solution with Probabilistic Event Prediction ........................................................................ 446
   Sunil Kumar Vuppala, Animikh Ghosh, Ketan A. Patil, and Kumar Padmanabh

Effect of Population Size for Node Placement in WMNs Considering Giant Component and Number of Covered Users Parameters .......... 454
   Tetsuya Oda, Admir Barolli, Evjola Spaho, Fatos Xhafa, Leonard Barolli, Makoto Takizawa, and Kazunori Uchida

Reliable Wildfire Monitoring with Sparsely Deployed Wireless Sensor Networks ................................................................. 460
   Ikjune Yoon, Dong Kun Noh, Dongeun Lee, Rony Teguh, Toshihisa Honma, and Heonshik Shin

Session 6B: Mobile Networks and Applications

Zero Scanning Time for 802.11 Networks by Using Media Independent Information Server (MIIS) ........................................................................ 467
   Muhammad Qasim Khan and Steinar Hidle Andresen

Channel Orthogonalization (CO) and its Combination with THP (CO-THP) for Multiuser MIMO Systems ........................................ 474
   Liang Zhou, Xiaohui Li, Yongqiang Hei, and Weiyi Yin

MOS-based Handover Protocol for Next Generation Wireless Networks ........................................ 479
   Sheetal Jadhav, Haibo Zhang, and Zhiyi Huang
Evaluations of Ant Colony Optimization Inspired SCTP Optimal Path Selection Using E-model ................................................................. 487

Muhammad Ariff Baharudin, Quang Tran Minh, and Eiji Kamioka

Session 6C: Trust and Security
A Differential Game Approach to Mitigating Primary User Emulation Attacks in Cognitive Radio Networks .................................................. 495

Dong Hao and Kouichi Sakurai

Personalizing EigenTrust in the Face of Communities and Centrality Attack ................................................................. 503

Nitin Chiluka, Nazareno Andrade, Dimitra Gkorou, and Johan Pouwelse

Uncertainty in Probabilistic Trust Models ................................................................. 511

Sadegh Dorri Nogoorani and Rasool Jalili

Trust-Based Security for Community-Based Cognitive Radio Networks ................................................................. 518

Sazia Parvin and Farookh Khadeer Hussain

Session 7A: Cloud Computing and Systems
Clock Skew Based Client Device Identification in Cloud Environments ................................................................. 526

Ding-Jie Huang, Kai-Ting Yang, Chien-Chun Ni, Wei-Chung Teng, Tien-Ruey Hsiang, and Yuh-Jye Lee

ScaleStar: Budget Conscious Scheduling Precedence-Constrained Many-task Workflow Applications in Cloud ................................................................. 534

Lingfang Zeng, Bharadwaj Veeravalli, and Xiaorong Li

Reliable Provisioning of Spot Instances for Compute-intensive Applications ................................................................. 542

William Voorsluys and Rajkumar Buyya

Lightweight Application-Level Task Migration for Mobile Cloud Computing ................................................................. 550

Ricky K.K. Ma and Cho-Li Wang

Session 7B: Communication Networks and Routing
Multi-retransmission Route Discovery Schemes for Ad Hoc Wireless Networks with a Realistic Physical Layer ................................................................. 558

Xiangyang Jin, Thomas Kunz, and Ivan Stoimenovic

On Multicast Routing with Traffic Grooming in Light-Trail Networks ................................................................. 566

Ching-Fang Hsu and Tzu-Huan Tang

PC-based Router Virtualization with Hardware Support ................................................................. 573

M. Siraj Rathore, Markus Hidell, and Peter Sjödin

AMIR: Another Multipath Interdomain Routing ................................................................. 581

Donghong Qin, Jaihai Yang, Zhuolin Liu, Hui Wang, Bin Zhang, and Wei Zhang
Session 7C: QoS and Service Oriented Architecture

Run-time Revenue Maximization for Composite Web Services with Response Time
Completability Quorums of Multimedia Objects
DEMODS: A Description Model for Data-as-a-Service
Applying Particle Swarm Optimization to Quality-of-Service-Driven Web Service Composition

Session 8A: Mobile and Ad Hoc Networks
Impact of Multi-flow Traffic in Wireless Mobile Ad-hoc Networks
Performance Comparison of DSDV and DYMO Protocols for Vehicular Ad Hoc Networks
Shortcut Anycast Tree Routing in MANETs
Proportionally Quasi-fair Scheduling Optimization in Wireless Ad Hoc Networks

Session 8B: Multimedia and Social Networking
Video Editing Using Motion Inpainting
Evaluating Quality of Health Information Sources
Instruction for Remote MR Cooperative Work with Captured Still Worker’s View
A Tangible Information Explorer Using Vibratory Touch Screen
Session 8C: Authentication and Secure Systems

Robust Mobile Device Integration of a Fingerprint Biometric Remote Authentication Scheme ................................................................. 678
Toan-Thinh Truong, Minh Tran, and Anh-Duc Duong

Compositional Logic for Proof of Correctness of Proposed UDT Security Mechanisms ................................................................. 686
Danilo Valeros Bernardo and Doan B. Hoang

An Efficient FPGA Design of PingPong-128 Stream Cipher for Secure Computing ................................................................. 695
Amlan Jyoti Choudhury, Hyotaek Lim, and Hoon-Jae Lee

Efficient and Secure Cross-Realm Client-to-Client Password-Authenticated Key Exchange ................................................................. 701
Po-Jen Chuang and Yi-Ping Liao

Session 9A: Wireless Sensor Networks

Investigation of Packet Loss in Mobile WSNs for AODV Protocol and Different Radio Models ................................................................. 709
Tao Yang, Tetsuya Oda, Leonard Barolli, Jiro Iwashige, Arjan Durresi, and Fatos Xhafa

Analysis of Field Intensity Distribution in Inhomogeneous Propagation Environment ................................................................. 716
Junichi Honda and Kazunori Uchida

An Algorithm for Jammer Localization in Wireless Sensor Networks .................................................................................. 724
Tianzhen Cheng, Ping Li, and Sencun Zhu

Karel Heurtefeux and Fabrice Valois

Session 9B: Cryptographic Techniques and Systems

Toward Data Confidentiality via Integrating Hybrid Encryption Schemes and Hadoop Distributed File System ................................................................. 740
Hsiao-Ying Lin, Shiuan-Tzuo Shen, Wen-Guey Tseng, and Bao-Shuh P. Lin

Knapsack Cryptosystems and Unreliable Reliance on Density .................................................................................. 748
Shang-Ming Jen, Tre-Lin Lai, Chia-Yu Lu, and Jar-Ferr Yang

Fundamental Incomplete Cryptography Method to Digital Rights Management Based on JPEG Lossy Compression .................................................................................. 755
Munetoshi Iwakiri and Ta Minh Thanh

Incomplete Cryptography Method Using Invariant Huffman Code Length to Digital Rights Management .................................................................................. 763
Munetoshi Iwakiri and Ta Minh Thanh
Session 9C: P2P and Scalable Systems

Inducing Scale-Free Characteristics of Dynamic Unstructured P2P Networks .............................................. 771
   Junichi Shimada, Kei Ohnishi, Hitomi Tamura, and Yuji Oie

Intrusion-Tolerant Shared Memory through a P2P Overlay Segmentation .................................................. 779
   Davi da Silva Böger, Jorn Fraga, Eduardo Alchieri, and Michelle Wangham

A Scheduling Method for Node Relay-based Webcast Considering Reconnection ............................................. 787
   Yusuke Gotoh, Tomoki Yoshihisa, Hideki Taniguchi, Masanori Kanazawa,
   Wenny Rahayu, and Yi-Ping Phoebe Chen

Building Distributed Attribute-Value Trees on DHT-based Networks .......................................................... 795
   Hoai Son Nguyen, Yasuo Tan, and Yoichi Shinoda

Session 10A: Wireless Sensor Networks and Systems

A Radio-disjoint Geographic Multipath Routing in Wireless Sensor Networks ............................................. 803
   Jeongcheol Lee, Hosung Park, Seungmin Oh, Yongbin Yim, and Sang-Ha Kim

A Low Cost Reliable Data Transmission Protocol over Multipath in Wireless Sensor Networks ....................... 810
   Haosong Gou and Younghwan Yoo

   Seungmin Oh, Yongbin Yim, Jeongcheol Lee, Hosung Park, and Sang-Ha Kim

Three-Dimensional Location-Based IPv6 Addressing for Wireless Sensor Networks in Smart Grid .............. 824
   Chih-Yung Cheng, Chi-Cheng Chuang, and Ray-I Chang

Session 10B: Communication Systems and Networks

Harsh RED: Improving RED for Limited Aggregate Traffic ................................................................. 832
   Ilpo Järvinen, Yi Ding, Aki Nyrhinen, and Markku Kojo

Distributed Reservation-Based MAC Protocol for UWB WiMedia MAC .................................................. 841
   Jiseon Lee, Hyeonmok Ko, and Cheeha Kim

Delay Guaranteed Media Access Control for Wireless Home Automation Networks .................................. 846
   Lei Jing, Zixue Cheng, and Yinghui Zhou

Session 10C: Scalable and Secure Computing

Preemption-aware Admission Control in a Virtualized Grid Federation ......................................................... 854
   Mohsen Amini Salehi, Bahman Javadi, and Rajkumar Buyya

Mining Network Traffic Efficiently to Detect Stepping-Stone Intrusion .................................................... 862
   Yingjie Sheng, Yongzhong Zhang, and Jianhua Yang
Session 11A: Wireless Networks

Experimental Results of a MANET Testbed in a Mixed Environment Considering Horizontal and Vertical Topologies

Masahiro Hiyama, Elis Kulla, Tetsuya Oda, Makoto Ikeda, and Leonard Barolli

Scheduling and Flow Control for Delay Guarantees in Multi-hop Wireless Networks

Ngoc-Thai Pham, Won-Joo Hwang, and Nak Woon Sung

Stochastic Optimization for Minimum Outage in Cooperative Ad-hoc Network

Thong Huynh, Ngoc-Thai Pham, Won-Joo Hwang, and Fabrice Theoleyre

Implementation and Evaluation of a Real Object-Oriented Communication Method for Ad-hoc Networks

Hiroyuki Suzuki and Akio Koyama

Session 11B: Energy-Efficient and Green Computing

An Extended Power Consumption Model for Distributed Applications

Tomoya Enokido and Makoto Takizawa

Algorithms for Selecting Energy-Efficient Storage Servers in Storage and Computation Oriented Applications

Takuro Inoue, Ailixier Aikebaier, Tomoya Enokido, and Makoto Takizawa

Greening the Internet Using Multi-frequency Scaling Scheme

Wei Meng, Yi Wang, Chengchen Hu, Keqiang He, Jun Li, and Bin Liu

Session 11C: Dependable Systems and Autonomic Computing

Combining Decomposition and Reduction for State Space Analysis of a Self-Stabilizing System

Nils Müller, Oliver Theel, and Martin Frommle

A Study on Coverage Problem of Network Planning in LTE-Advanced Relay Networks

Fan-Hsun Tseng, Chi-Yuan Chen, Li-Der Chou, Tin-Yu Wu, and Han-Chieh Chao

Deterministic High Density Packet-Buffer System for Low Cost Network Systems

Hisashi Iwamoto, Yuji Yano, Yasuto Kuroda, Koji Yamamoto, Shingo Ata, and Kazunari Inoue

Author Index
