CONTENTS

CYCLE INNOVATIONS

GT2011-45092 ................................................................. 1
A Method to Evaluate the Impact of Power Demand on HPT Blade Creep Life
  W. Mohamed, S. Eshati, P. Pilidis, S. Ogaji, P. Laskaridis, and A. Nasir

GT2011-45168* ................................................................. 11
Experimental and Analytical Study on the Operation Characteristics of the AHAT System
  Hidefumi Araki, Tomomi Koganezawa, Chihiro Myouren, Shinichi Higuchi,
  Toru Takahashi, and Takashi Eta

GT2011-45219 ................................................................. 23
Performance Modelling of Unfired Steam Cycle Using a Single and Dual Pressure
  Once Through Steam Generator
  Emad Hamid, Mike Newby, and Pericles Pilidis

GT2011-45259 ................................................................. 35
Intercooled-Recuperated Gas-Turbine-Cycle Engine Coupled With Pneumatic Motor With
  Quasi-Isothermal Heat Addition
  Branko Stankovic

GT2011-45289* ................................................................. 49
Improved Multiple Point Non-Linear Genetic Algorithm (GA) Based Performance Adaptation
  Using Least Square Method
  Y. G. Li, M. F. Abdul Ghafir, L. Wang, R. Singh, K. Huang, X. Feng, and W. Zhang

GT2011-45331 ................................................................. 61
Effect of Variable Guide Vanes and Natural Gas Hybridization for Accommodating
  Fluctuations in Solar Input to a Gas Turbine
  Kyle Kitzmiller and Fletcher Miller

GT2011-45336 ................................................................. 75
Study on Fault Diagnostics of a Turboprop Engine Using Inverse Performance Model and
  Artificial Intelligent Methods
  Changduk Kong and Semyeong Lim

GT2011-45337 ................................................................. 85
Development of GUI Type On-Line Condition Monitoring Program for a Turboprop Engine
  Using LabVIEW®
  Changduk Kong, Keonwoo Kim, and Jihyun Kim

GT2011-45369 ................................................................. 91
Preliminary Experimental Results of IGFC Operation Using Hardware Simulation
  Alberto Traverso, David Tucker, and Comas L. Haynes

*This paper has been recommended for publication in the ASME Transaction Journals
A Thermodynamic Analysis of Chemical Looping Combustion
Andrew L. Heyes, Loukas Botsis, Niall R. McGlashan, and Peter R. N. Childs

Real-Time Simulation of an Experimental Rig With Pressurized SOFC
Paolo Pezzini, Francesco Caratozzolo, and Alberto Traverso

Flue Gas Recirculation in a Gas Turbine: Impact on Performance and Operational Behavior
Frank Sander, Richard Carroni, Stefan Rofka, and Eribert Benz

Development and Testing of Sustainable Refrigeration Plants
Luciano A. Catalano, Fabio De Bellis, and Riccardo Amirante

Post Combustion CO₂ Capture on Combined Cycle Utilizing Hot-Water for Absorbent Regeneration
Klas Jonshagen, Majed Sammak, and Magnus Genrup

A Study of Steam-Cooled Humidified Gas Turbine Cycles
Ching-Jen (C. J.) Tang

Repowering of a Rankine Cycle Power Plant by Means of Concentrating Solar Collectors
Sergio M. Camporeale, Bernardo Fortunato, and Alessandro Saponaro

Performance Simulation of a Hybrid Micro Gas Turbine Fuel Cell System Based on Existing Components
D. P. Bakalis and A. G. Stamatis

The Performance Modelling of a Single and Dual Pressure Unfired Once Through Steam Generator
Emad Hamid, Mike Newby, and Pericles Pilidis

Conceptual Design and Performance Analysis of SOFC/MGT Hybrid Distributed Energy System
Zheng Dang, Hua Zhao, and Guang Xi

Design and Performance Analysis of a Solid Oxide Fuel Cell/Gas Turbine (SOFC/GT) Hybrid System Used in Combined Cooling Heating and Power System
Hsiao-Wei D. Chiang, Chih-Neng Hsu, Wu-Bin Huang, Chen-Yin Lin, Chien-Hsiung Lee, Wei-Ping Huang, Wen-Tang Hong, and Hsueh-I Tan

*This paper has been recommended for publication in the ASME Transaction Journals*
GT2011-46192 ................................................................. 211
150 kw Class Two-Stage Radial Inflow Condensing Steam Turbine System
Kazutaka Hayashi, Hiroyuki Shiraiwa, Hiroyuki Yamada, Susumu Nakano, and
Kuniyoshi Tsubouchi

GT2011-46210 ................................................................. 221
On Line Compressor Cascade Washing for Gas Turbine Performance Investigation
Uyioghosa Igie, Pericles Pilidis, Dimitrios Fouflias, Ken Ramsden, and Paul Lambart

GT2011-46274* ............................................................... 233
Application of MCFC in Coal Gasification Plants for High Efficiency CO₂ Capture
Vincenzo Spallina, Matteo C. Romano, Stefano Campanari, and Giovanni Lozza

GT2011-46282 ................................................................. 243
System Analysis of IGFC with Exergy Recuperation Utilizing Low-Grade Coal
Risa Nomura, Norihiko Iki, Osamu Kurata, Masako Kawabata, Atsushi Tsutsumi,
Eiichi Koda, and Hirohide Furutani

GT2011-46299 ................................................................. 253
Conceptual Design of a Mid-Sized Semi-Closed Oxy-Fuel Combustion Combined Cycle
Majed Sammak, Klas Jonshagen, Marcus Thern, Magnus Genrup, Egill Thorbergsson,
Tomas Grönstedt, and Adrian Dahlquist

GT2011-46375 ................................................................. 263
Impact of Steam Injection and Turbine Exhaust Gas Bypass in the Recuperative Cycle
Gas Turbine CHP System
S. Y. Kang and T. S. Kim

GT2011-46565 ................................................................. 273
Influence of Variable Geometry Transients on the Gas Turbine Performance
João Roberto Barbosa, Franco Jefferds dos Santos Silva, Jesuíno Takachi Tomita, and
Cleverson Bringhenti

GT2011-46602 ................................................................. 283
A Pb/Zn Based Chemical Looping System for Hydrogen and Power Production With
Carbon Capture
Niall R. McGlashan, Peter R. N. Childs, and Andrew L. Heyes

GT2011-46845 ................................................................. 293
Implication of Different Fuel Injector Configurations for Hydrogen Fuelled
Micromix Combustors
Bhupendra Khandelwal, Yingchun Li, Priyadarshini Murthy, Vishal Sethi, and Riti Singh

FANS AND BLOWERS
GT2011-45094 ................................................................. 299
The Effects of Radially Distorted Incident Flow on the Performance of Axial-Flow Fans With
Forward-Skewed Blades
B. Yang and Ch. G. Gu

*This paper has been recommended for publication in the ASME Transaction Journals
The Simulation of an Axial Flow Fan Performance Curve at Low Flow Rates
S. J. van der Spuy, F. N. le Roux, T. W. von Backström, and D. G. Kröger

Predicting Blade Leading Edge Erosion in an Axial Induced Draft Fan
Alessandro Corsini, Andrea Marchegiani, Franco Rispoli, Paolo Venturini, and Anthony G. Sheard

Stall Inception, Evolution and Control in a Low Speed Axial Fan With Variable Pitch in Motion
Stefano Bianchi, Alessandro Corsini, Luca Mazzucco, Lucilla Monteleone, and Anthony G. Sheard

Application of an Inverse Cascade Analytical and Numerical Design Method Used in the Design of Axial Fans
Mihai Miclea-Bleiziffer, Philipp Epple, Henrik Smith, Matthias Semel, and Antonio Delgado

Reversing of Axial Flow Fans for Ventilation
Vaclav Cyrus, Jan Cyrus, and Jiri Pelnar

Fluid Dynamic Design and Optimization of Two Stage Centrifugal Fan for Industrial Burners
C. Ferrari, M. Pinelli, P. R. Spina, P. Bolognin, and L. Borghi

Experimental Characterization of the Influence of Auxiliary Devices on the Noise Generated by Industrial Centrifugal Fan and Correlation to the Geometrical and Fluid Dynamic Parameters
M. Cadorin, M. Pinelli, E. Podeschi, F. Pompoli, and A. Zanardi

A Study on the Influence of Hole’s Diameter With Holed Casing Treatment
Wei Xu, Tong Wang, Chuangang Gu, and Liang Ding

Extended Mean Line Theory for Axial Fans: Analytic Calculation of the Flow Characteristics for Off-Design Points
Matthias Semel, Philipp Epple, Mihai Miclea-Bleiziffer, Antonio Delgado, and Henrik Smith

Accurate Calculation of the Slip Factor of Axial Cascades and Impellers for Arbitrary Blade Shapes
Henrik Smith, Matthias Semel, Philipp Epple, Mihai Miclea-Bleiziffer, and Antonio Delgado
Gas Turbine Failure due to Water Wash and Extraction Line Blockage
  Abdulmajeed A. Ali

Design Principles and Sizing Approach of Unfired Once-Through Steam Generators
  E. Hamid, M. Newby, and P. Pilidis

Strategy for Selecting Optimised Technologies for Gas Turbine Air Inlet Filtration Systems
  Stephen D. Hiner

Assessment of Gas Turbine and Combined Cycle Power Plant Performance Degradation
  Nina Hepperle, Dirk Therkorn, Ernst Schneider, and Stephan Staudacher

Upgrade of the Intake Air Cooling System for a Heavy Duty Industrial Gas Turbine
  Steve Ingistov and Mustapha Chaker

Development of the 5MW Power Generation Gas Turbine Engine
  Sooyong Kim, Sungryong Lee, Jewook Ryu, and Volodymyr Spitsyn

Combined Cycle Inlet Air Cooling by Cold Thermal Storage: Aeroderivative vs. Heavy Duty GT Comparison
  G. Barigozzi, N. Palestra, A. Perdichizzi, and G. Salvitti

The Numerical Simulation of Inlet Fogging Effects on the Stable Range of a Transonic Compressor Stage
  Mingcong Luo, Qun Zheng, Lanxin Sun, Qingfeng Deng, Song Li, Chunlei Liu, and Rakesh K. Bhargava

Gas Turbine Bottoming Cycles for Cogenerative Applications: Comparison of Different Heat Recovery Cycle Solutions
  Rakesh K. Bhargava, Michele Bianchi, and Andrea De Pascale

Optimal Operation of a Gas Turbine Cogeneration Plant in Consideration of Equipment Minimum Up and Down Times
  Ryohei Yokoyama

*This paper has been recommended for publication in the ASME Transaction Journals
Selection of Climatic Design Points for Gas Turbine Power Augmentation
Mustapha Chaker and Cyrus B. Meher-Homji

Performance Modeling of a Power Generation Gas Turbine With Wet Compression
German Montalvo-Catano and Walter F. O’Brien

Gas Turbine Inlet Filtration System Life Cycle Cost Analysis
Melissa Wilcox and Klaus Brun

Investigation of Cooling Effectiveness of Gas Turbine Inlet Fogging Location Relative to the Silencer
Jobaidur R. Khan, Ting Wang, and Mustapha Chaker

MANUFACTURING MATERIALS AND METALLURGY

Comparative Performance of a Thermal Barrier Coating System Utilizing Platinum Aluminide Bond Coat on Alloys CMSX-4® and MAR M® 002DS
H. M. Tawancy and Luai M. Al-Hadhrami

Thermal Properties and Phase Analysis of Titania Doped Yttria-Zirconia Ceramics for Use as High Temperature Thermal Barrier Coatings (TBCs)
L. J. Romualdez, M. Kibsey, X. Huang, and R. Kearsey

Mechanical Properties of Titania-Doped Yttria Stabilized Zirconia (TiYSZ) for Use as Thermal Barrier Coating (TBC)
M. Kibsey, J. Romualdez, X. Huang, R. Kearsey, and Q. Yang

Mechanical Property Variability of Cast Ni-base Superalloy IGT Components
Cynthia Klein, Hans-Juergen Kiesow, and Phillip Gravett

Oxidation Behaviour of Conventional and Nanocrystalline CoNiCrAlY Bond Coats Manufactured by Cold Spray
P. Richer, M. Yandouzi, M. Brochu, A. Zúñiga, A. Corbeil, and B. Jodoin

Simulation of Combustor Damage Mechanisms and Material System Performance via a Sub-Element Configured Specimen Test
Nagaraja Rudrapatna and Benjamin H. Peterson

*This paper has been recommended for publication in the ASME Transaction Journals
Characterization of Pre- and Post-Service Grain Boundary Phases in a Cast Austenitic Steel
Raymond R. Unocic, Kinga A. Unocic, Bruce A. Pint, and Mark D. Lipschutz

Repair Process Technology Development and Experience of Frame 7FA+E, Stage 1 Turbine Buckets
Warren Miglietti, Juan Escudero, Julio Lanza, Ian Summerside, and Zaki Zainuddin

Low Cycle Fatigue Characteristics of a Low-Thermal Expansion, High Strength Alloy (HAYNES® 242® Alloy)
L. M. Pike and S. K. Srivastava

Aluminizing Turbine Parts: Processes and Coatings
Martin Thoma, Andrea Scrivani, Carlo Giolli, and Andrea Giorgetti

Shot Peening Effect on Low Cycle Fatigue Properties of Ti-6Al-4V and Inconel 718
Hiroshi Nakamura, Masahiro Takanashi, Yu Itabashi, Hiroshi Kuroki, and Yusuke Ueda

Removals for Cause: A 35-Year Assessment of LM2500 Engine Removals by the United States Navy
Matthew J. Driscoll, Eric M. McFetridge, Jeffrey S. Patterson, and Craig A. See

Development of a PLC Based Controller for Marine Gas Turbine Generator
Amrut Godbole, Ankush Gulati, and Alok Bhagwat

Ship Propulsion Self-Excited Torsional Vibration
Glenn McAndrews, Robert Murray, and Paul Gemin

The Development and Application of the Rolls-Royce MT30 Marine Gas Turbine
David Pearson and Simon Newman

New Locking Arrangement for Radial Entry Turbine Blades
Samuel L. Golinkin, Michael J. Lipski, John S. Loudon, Gennaro J. DiOrio, and Timothy Ewer

*This paper has been recommended for publication in the ASME Transaction Journals
Failure Investigation of a 6th Stage Compressor Blade on a ETF40B Gas Turbine Engine
  Gerrick Slogar, Gary Prus, and Benjamin Canilang

Integrating a Hybrid Electric Drive Propulsion System With the Existing DDG 51 Class Machinery Control System
  Richard Halpin and Frank Sapienza

Full Authority Digital Control (FADC) Local Operating Panels (LOCOPs): The Foundation for Improvement
  Christopher Corso, Andrew Bigley, Brian Connery, and Jeremy Nichols

Modeling and Control System Design of a Marine Condensing System
  Zhixin Sun, Jiangfeng Wang, Yiping Dai, and Danmei Xie

Development of Centrifugal Type Fuel Gas Compressor Package for FPSO
  Sangmyeong Lee, Yeongsoo Hwang, and Beaseog In

Marine Gas Turbine Performance Model for More Electric Ships
  George M. Koutsothanasis, Anestis I. Kalfas, and Georgios Doulgeris

Evolution of the DDG 51 Machinery Control System to Support SSGTG Local Controller Upgrades
  Parag Shah and Scott Kade

Single vs. Dual Recycle System Requirements in the Design of High Pressure Ratio, Low Inertia Centrifugal Compressor Stations
  K. K. Botros

Selection Criteria of Spring Stiffness of Nozzle Type Check Valves for Compressor Station Applications
  K. K. Botros

Fouling Mechanisms in Axial Compressors
  Rainer Kurz and Klaus Brun

*This paper has been recommended for publication in the ASME Transaction Journals
