Table of Contents

Message from Program Chair ................................................................. viii
Organizing Committee ........................................................................... ix
Program Committee ................................................................................ x
Steering Committee ............................................................................. xii
Reviewers ................................................................................................. xiii
Plenary Panel ............................................................................................ xiv

Fault Tolerance

Low-Cost Secret-Sharing in Sensor Networks ........................................... 1
Marin Bertier, Achour Mostefaoui, and Gilles Trédan

EBAWA: Efficient Byzantine Agreement for Wide-Area Networks ............ 10
Giuliana Santos Veronese, Miguel Correia, Alysson Neves Bessani, and Lau Cheuk Lung

Scalable Fault Detection for FPGAs ......................................................... 20
Frantz Iwu

Reliability/Availability Modeling

Predicting Faults in High Assurance Software .......................................... 26
Naeem Seliya, Taghi M. Khoshgoftaar, and Jason Van Hulse

A UML-Based Domain Specific Modeling Language for the Availability
Management Framework ........................................................................... 35
Pejman Salehi, Abdelwahab Hamoud-Lhadj, Pietro Colombo, Ferhat Khendek, and Maria Toeroe

Symbolic Representation Techniques in Dynamic Reliability Evaluation ......................................................... 45
Salvatore Distefano, Francesco Longo, and Marco Scarpa
Testing

A Stateful Approach to Testing Monitors in Multithreaded Programs ....................................................... 54
Richard H. Carver and Jeff Lei

A Dataflow Testing Approach for Aspect-Oriented Programs ................................................................. 64
Fadi Wedyan and Sudipto Ghosh

Paths to Property Violation: A Structural Approach for Analyzing Counter-Examples ................................... 74
Thomas Bochot, Pierre Virelizier, Helene Waeselynck, and Virginie Wiels

Case Studies

Hybrid Petri Nets with General One-Shot Transitions for Dependability Evaluation of Fluid Critical Infrastructures .................................................. 84
Marco Gribaudo and Anne Remke

Formal Analysis of the Kaminsky DNS Cache-Poisoning Attack Using Probabilistic Model Checking ................................................................. 94
Nikolaos Alexiou, Stylianos Basagiannis, Panagiotis Katsaros, Tushar Dashpande, and Scott A. Smolka

Experience with Model-Based User-Centered Risk Assessment for Service Robots ........................................ 104
Jérémie Guiochet, Damien Martin-Guillerez, and David Powell

Formal Methods

Proved Metamodels as Backbone for Software Adaptation ................................................................. 114
Franck Barbier and Cyril Ballagny

Reverse Engineering Abstract Components for Model-Based Development and Verification of Embedded Software .......................................................... 122
Yunja Choi and Hoon Jang

A Framework for Qualitative and Quantitative Formal Model-Based Safety Analysis .................................. 132
Matthias Gudemann and Frank Ortmeler

Information and System Assurance

Domain-Specific Feature Modeling for High Integrity Vehicle Control System Functional Design ............... 142
Shige Wang

Evaluation and Comparisons of Dependable Distributed Storage Designs for Clouds ................................. 152
Liangliang Xiao, Yunqi Ye, I-Ling Yen, and Farokh Bastani
Fast Abstracts

Enhancing Performance of Random Testing through Markov Chain Monte Carlo Methods ................................................................. 162
Bo Zhou, Hiroyuki Okamura, and Tadashi Dahi

Architecture-Based Reliability Modeling of Web Services Using Petri Nets ................................................................. 164
Cobra Rahmani, Azad Azadmanesh, and Harvey Sy

Automatic Fault Behavior Detection and Modeling by a State-Based Specification Method ................................................................. 166
Luca Pazzi, Matteo Interlandi, and Marco Pradelli

Automated Testing of LTL Formula Generation by Prospec ................................................................................................. 168
Cuauhtemoc Munoz and Steve Roach

A Dependability Case Editor with Pattern Library ................................................................................................. 170
Yutaka Matsuno, Hiroki Takamura, and Yutaka Ishikawa

Author Index ................................................................................................. 172
