Message from the General Chair .......................................................... viii
A Word from the Program Committee Chair ......................................... ix
Organizing Committee ........................................................................... x
Sponsors ............................................................................................... xvii

Session 1: Software Security
Using Behavioral Profiles to Detect Software Flaws in Network Servers .............................................................................. 1
   João Antunes and Nuno Fuentecilla Neves
Diversity for Security: A Study with Off-the-Shelf AntiVirus Engines ......................................................................................... 11
   Peter Bishop, Robin Bloomfield, Ilir Gashi, and Vladimir Stankovic
Server Side Detection of Content Sniffing Attacks ................................. 20
   Anton Barua, Hossain Shahriar, and Mohammad Zulkernine

Session 2: Software Safety
A Model-Driven Engineering Approach to Support the Verification of Compliance to Safety Standards .................................................................. 30
   Rajwinder Kaur Panesar-Walawege, Mehrdad Sabetzadeh, and Lionel Briand
The Early Identification of Detector Locations in Dependable Software ......................................................................................... 40
   Arshad Jhumka and Matthew Leeke
Experiences with Assurance Cases for Spacecraft Safing ............................ 50
   Elisabeth A Nguyen and Alex G. Ellis

Session 3: Data Driven Software Reliability Studies
Mining Cause-Effect-Chains from Version Histories .................................. 60
   Kim Herzig and Andreas Zeller
Statistical Evaluation of Complex Input-Output Transformations .......................... 70
   Gang Shu, Zhuofu Bai, and Andy Podgurski
Uncertainty Propagation through Software Dependability Models .............................................. 80
Kesari Mishra and Kishor S. Trivedi

Feature Interaction Faults Revisited: An Exploratory Study ......................................................... 90
Brady J. Garvin and Myra B. Cohen

Session 4: Unit Testing

JavaScript Errors in the Wild: An Empirical Study ................................................................. 100
Frolin S. Ocariza Jr., Karthik Pattabiraman, and Benjamin Zorn

Efficiently Running Test Suites Using Abstract Undo Operations ........................................... 110
Shadi Abdul Khalek and Sarfraz Khurshid

PACOGEN: Automatic Generation of Pairwise Test Configurations from Feature Models ................................................................. 120
Aymeric Hervieu, Benoit Baudry, and Arnaud Gotlieb

Adaptive Regression Testing Strategy: An Empirical Study ................................................... 130
Md. Junaid Arafeen and Hyunsook Do

Session 5: System Testing

Impact Analysis of Configuration Changes for Test Case Selection ......................................... 140
Xiao Qu, Mithun Acharya, and Brian Robinson

A Hybrid Directed Test Suite Augmentation Technique ...................................................... 150
Zhihong Xu, Yunho Kim, Moonzoo Kim, and Gregg Rothermel

LOFT: Redundant Synchronization Event Removal for Data Race Detection ........................ 160
Yan Cai and W.K. Chan

An Empirical Study of JUnit Test-Suite Reduction ................................................................. 170
Lingming Zhang, Darko Marinov, Lu Zhang, and Sarfraz Khurshid

Session 6: Formal Development and Analysis

Rigorous Development of Dependable Systems Using Fault Tolerance Views ........................ 180
Ilya Lopatkin, Alexei Iliasov, and Alexander Romanovsky

PAT 3: An Extensible Architecture for Building Multi-domain Model Checkers .................... 190
Yang Liu, Jun Sun, and Jin Song Dong

Safety Analysis of Trampoline OS Using Model Checking: An Experience Report .................. 200
Yunja Choi

Session 7: Software and System Reliability

Yilei Zhang, Zibin Zheng, and Michael R. Lyu
Software Reliability Growth Models Based on Local Polynomial Modeling
with Kernel Smoothing .................................................................................................................. 220
L. Sandamali Dharmasena, P. Zeephongsekul, and Chathuri L. Jayasinghe

Efficient Analysis of Fault Trees with Voting Gates ........................................................................ 230
Jianwen Xiang, Kazuo Yanoo, Yoshiharu Maeno, Kumiko Tadano, Fumio Machida,
Atsushi Kobayashi, and Takao Osaki

Session 8: Software Aging and Rejuvenation

Workload Characterization for Software Aging Analysis ..................................................................... 240
Antonio Bovenzi, Domenico Cotroneo, Roberto Pietrantuono, and Stefano Russo

Optimal Resource Allocation in a Virtualized Software Aging Platform with Software
Rejuvenation ......................................................................................................................................... 250
Javier Alonso, Íñigo Goiri, Jordi Guitart, Ricard Gavalda, and Jordi Torres

Injecting Memory Leaks to Accelerate Software Failures ..................................................................... 260
Jing Zhao, Yuliang Jin, Kishor S. Trivedi, and Rivalino Matias Jr.

Author Index .......................................................................................................................................... 270
