9th International Conference on the Mechanical and Physical Behaviour of Materials under Dynamic Loading

Royal Military Academy, Brussels, Belgium
September 7–11, 2009

Experimental Techniques
Industrial Applications
Bio-Mechanics

Volume 1/2

17 avenue du Hoggar, PA de Courtabœuf, B.P. 112, 91944 Les Ulis cedex A, France
## Contents

### VOLUME 1

#### Experimental Techniques

Progress towards materials science above 1000 GPa (10 Mbar) on the NIF laser
B.A. Remington, H.-S. Park, S.T. Prisbrey, S.M. Pollaine, R.M. Cavallo, R.E. Rudd,
K.T. Lorenz, R.C. Becker, J.V. Bernier, N.R. Barton, A. Arsenlis, S.G. Glendinning,
A.V. Hamza, D.W. Swift and A.F. Jankowski .......................................................... 3

Experimental and numerical analysis on dry and saturated concrete behaviour under
high pressure confinement
C. Pontiroli, Y. Malécot, X.H. Vu, L. Daudeville, E. Buzaud
and A. Rouquand ...................................................... 11

Static and dynamic mechanical properties of epoxy-based multi-constituent particulate
composites
J.L. Jordan, B. White, J.E. Spowart, N.N. Thadhani and D.W. Richards ............... 19

Dynamic response of Sn over the temperature range 115–503 K
E.B. Zaretsky and G.I. Kanel ................................................................. 27

Novel pure-shear sheet specimen geometry for dynamic material characterization
J. Peirs, P. Verleysen, W. Van Paepegem and J. Degrieck .............................. 35

Studies on high strain-rate behavior of materials by using a new method combining
HPB technique with Lagrangian analysis
L. Wang, H. Lai and J. Zhu ................................................................. 43

Damage of multilayered surface by micro-jet impact of liquid metal
M. Futakawa, T. Naoe, M. Kawai, T. Wakui and H. Kogawa ......................... 51

Dynamic behaviour of granular materials at impact

Static and dynamic confined compression of Borosilicate glass
S. Chocron, K.A. Dannemann, J.D. Walker, A.E. Nicholls
and C.E. Anderson Jr. ................................................................. 67

Experimental and numerical investigations on the behavior of steel plates and
structures under impact loading
L.W. Meyer, T. Halle and S. Abdel-Malek ................................................... 73

Accounting for the effect of local punching at the bar/specimen interface in
SHPB experiments
K. Safa and G. Gary ................................................................. 81

</table>
A high-explosive driven experiment to compare the reflected Hugoniot and the release adiabat curves of Ti-6Al-4V alloy from a 52 GPa shock state
A. Sollier, V. Bouyer, J.-B. Maillet and C. Voltz .............................................. 207

Dynamic tests on a cohesive and frictional material. Influence of high pressure and high strain rate on compaction and shear
P. Bailly, F. Delvare, M. Biessy and D. Picart .................................................. 213

Experimental characterisation of the strain rate dependent failure and damage behaviour of 3D composites
R. Gerlach, C.R. Siviour, N. Petrinic and J. Wiegand ...................................... 219

Experimental investigations of the dynamic behaviour of a low alloy structural steel S355K2G3
A. Lachaud, P. Hereil and J. Mespoulet ............................................................. 227

Impact tensile test: A new type of crash test for welded joints used in automotive applications
E. Bayraktar, J. Chevalier, F. Bonnet, D. Kaplan and J. Claeys .......................... 235

Impact friction test for friction materials
J. Li, F. Lu, P. Zhao, R. Chen and Y. Lin ............................................................. 243

A new technique for compression tests at intermediate strain rates: Prototype results
T.J. Cloete and S. Oxtoby ................................................................. 249

Taylor impact experiments on Ti-6Al-4V specimens using 3D geometry reconstruction and instrumented target rods

A method to calibrate a specimen with strain gauges to measure force over the full-force range in high rate testing

Determination of dynamic shear stress – Strain relationship in adhesively bonded assemblies

High speed blanking: An experimental method to calculate the induced cutting forces
C. Gaudillière, N. Ranc, A. Larue and P. Lorong ............................................. 281

New heterodyne velocimeter and shock physics
J. Bénier, P. Mercier, E. Dubreuil, J. Veaux and P.A. Frugier .......................... 289

Full-field strain measurements at high rate on notched composites tested with a tensile Hopkinson bar
R. Moulart, F. Pierron, S.R. Hallett and M.R. Wisnom ........................................ 295

Dynamic compressive properties of nickel-based honeycomb sandwich and two-layered sandwich

Analysis of temperature measurement at material/LiF interface under moderate shock wave compression
C. Chauvin, J. Petit, P.-L. Héreil and M. Boustie ............................................. 311
On the perforation process of 2024-T3 aluminium sheets subjected to low impact velocity: Effects of friction condition and initial temperature
J.A. Rodriguez-Martinez, A. Rusinek, A. Arias and E. Dossou .................................. 319

Dynamic tensile fragmentations of Al₂O₃ rings under radial expansion loading
F.H. Zhou and Y.G. Wang ................................................................. 325

A comparison of the quasistatic and dynamic compressibilities of wet and dry vermiculite
S.M. Walley and W.G. Proud ............................................................. 331

The derivation of material parameters from measurements of blow-off impulse and stress induced by electron beam
W.-H. Tang, H. Chen and X.-W. Ran .................................................. 337

Intermediate strain rate characterization of a plastic-bonded explosive composition
D. Picart, M. Biessy and J.L. Brigolle ................................................ 343

Response of the Edam cheese to impact loading
J. Buchar, S. Nedomova and L. Severa .............................................. 349

Dynamic optical technique applied to define the zone of 3D and transient effects during dynamic crack propagations
S. Hedan, V. Valle and M. Cottron .................................................... 355

Dynamic compression testing by means of Charpy pendulum
J. Dzugan and V. Mentl ................................................................. 363

Development of an experimental device for low velocity impacts on energetic material
P. Mateille, S. Coussy, L. Daridon, O. Arnould, A. Fanget and E. Lapebie .............. 367

Validation of digital image correlation technique for impact loading applications
S. Palanivelu, S. De Pauw, W. Van Paepegem, J. Degrieck, J. Van Ackeren,
D. Kakogiannis, J. Wastiels, D. Van Hemelrijck and J. Vantomme ..................... 373

A hydro-pneumatic machine for intermediate strain-rates: set-up, tests and numerical simulations
V. Tarigopula, C. Albertini, M. Langseth, O.S. Hopperstad
and A.H. Clausen ................................................................. 381

A modified Hopkinson bar system for testing ultra-soft materials under intermediate strain rates
R. Chen, S. Huang, K. Xia and F. Lu .............................................. 389

Study of adiabatic localized shear in metals by split Hopkinson pressure bar method
V. Pushkov, A. Yurlov, A. Bol’shakov, A. Podurets, A. Kal’manov
and E. Koshatova ................................................................. 395

Strength and failure of planar ampoules in shock-wave tests
O. Drennov, A. Mikhaylov, R. Osipov and A. Fedorov .................................. 401

Dynamic fracture initiation toughness of high strength steel alloys
J.T. Foster, W.W. Chen and V.K. Luk .............................................. 407

Out-of-plane behavior of honeycombs under dynamic combined compressive and shear loading
B. Hou, A. Ono, S. Abdennadher, Y.L. Li, S. Pattodatto and H. Zhao .................. 413
Experimental and numerical studies of cylindrical projectile high-velocity impact on steel targets in water
   Z. Guo, X. Xiao, W. Zhang and Z. Mu ................................................................. 421

High energy absorption of warp interlock fabrics: application to high speed impact of fragments
   M. Lefebvre and F. Boussu ................................................................. 429

Pseudo-inverse method for the identification of non-homogeneous stress field in dynamic experiments
   S. Aloui, R. Othman, E. Verron, P. Guégan and A. Poitou ........................................... 437

Dynamic deformation of aluminum alloys at high temperature by using SHPB techniques
   O.S. Lee, S.W. Hwang, H.B. Choi, D.H. Kim and H.M. Kim ........................................ 443

High strain rate delamination of glass fibre reinforced polymers using a Hopkinson bar configured for spalling
   R. Govender, L. Louca, A. Pullen and G. Nurick .................................................. 449

An electrical pulse-heated Kolsky bar technique for high strain rate flow stress measurements of rapidly heated metals
   S.P. Mates, S. Banovic, R. Rhorer, T. Burns, E. Whitenton and D. Basak .................. 453

Effect of projectile type and impact velocity on the ballistic impact failure of TROGAMID CX-7323 Nylon: Experiment and simulation
   N. Tsantinis, J.W. Song and R. Paulson ................................................................. 463

Experimental study of the behaviour of building structural elements under soft impact
   P. Bailly, F. Delvare and J.L. Hanus ................................................................. 471

Testing the impact tensile properties of ceramics with SHPB
   L. Song, L.M. Yang and F.L. Huang ................................................................. 479

Theoretical assessment of stress-strain curve estimates in Split Hopkinson Bar experiments
   D. Mohr, G. Gary and B. Lundberg ................................................................. 485

Influence of pulsed electric current treatment on strength of reinforcing steel and its welds under impact loading
   L. Kruszka, G. Stepanov, V. Zubov and A. Babutski .................................................. 491

Dynamic mechanical behaviour of polyethylene
   R.T. Moura, A.H. Clausen, M. Langseth and M. Alves ........................................... 497

A study of dynamic behavior of the autoclaved aerated concrete
   R. Belouettar and J.R. Klepaczkko ................................................................. 503

The dynamic temperature measurement of split Hopkinson bar specimens using small thermocouples and infrared streak photography
   S.M. Walley, W.G. Proud, P.J. Rac and J.E. Field ........................................... 511

An experimental study on dynamic constitutive model of clay under multiaxial compression
   S. Jing, F. Lu, Y. Lin and R. Chen ................................................................. 517

Development of normalized impact test of rubber projectiles on laminate composite panels
Optical observations and numerical simulations on the evolution of ASB in structural steel
   S. Chen, C. Huang, T. Lan, Y. Zhang and G. Ni ........................................... 531

A new validation test of the constitutive equations: Cylindrical implosion from explosive
   J.M. Servas and E. Martinez ................................................................. 539

Impact behaviour of hollow sphere agglomerates with density gradient
   H.B. Zeng, S. Pattofatto, H. Zhao, Y. Girard and V. Fascio ......................... 547

Polymeric foam behaviour under static and dynamic loadings – Effect of the gas entrapped
   in the porous structure
   D. Egurreguy and P. Viot ................................................................. 555

Damage mechanism in high hardness armor (HHA) steel subjected to V50 ballistic impact
   A.G. Odeshi, M.N. Bassim and M. Bolduc ............................................... 563

Characterisation of shock-absorbing components under impact loading
   K. Müller, T. Quercetti and A. Musolff ............................................... 569

Fracture behavior of a Zr-metallic glass under dynamic compression
   Z. Ling, J.X. Meng, M.Q. Jiang and L.H. Dai ........................................ 575

A new split Hopkinson pressure-shear testing set
   L. Yuliang, L. Fangyun, Z. Pengduo, L. Junling and C. Yunxiao ................... 583

Study of stress wave propagation in SHPB with NHDMOC
   M. Xu, G. Zhang, Q. Cai, R. Zhang and W. Tang ...................................... 591

High strain rate bulge testing of a DP450 steel using a nylon SHPB system
   V. Grolleau, D. Mohr, A. Penin, G. Gary and B. Galpin ............................ 597

Tensile strength of dried mortar over a wide range of strain rate
   B. Erzar, E. Buzaud, P. Forquin and C. Pontiroli .................................. 603

The correction for using X-cut quartz transducers in SHPB
   P. Zhao, Y. Lin, F. Lu, J. Li, R. Chen and G. Sun .................................. 611

Experimental definition of dynamic friction
   A. Bragov, A. Konstantinov, A. Lomunov, Y. Shmotin and L. Kruszka ............ 619

Two-dimensional investigation of laser shock induced spallation in sub-picosecond
   regime
   J.-P. Cuq-Lelandais, M. Boustie, L. Berthe, P. Combis, A. Sollier, T. De Resseguiier,
   E. Lescoute, E. Gay, L. Soulard and J. Bontaz-Carion ............................ 625

Study on the behavior of plain and steel fiber reinforce concrete to a dynamic tensile loading

Impact compressive failure of a unidirectional carbon/epoxy laminated composite in three
   principal material directions
   T. Yokoyama and K. Nakai ............................................................... 639

Dynamic behavior of UFG aluminum at a wide range of strain rates and temperatures in
   compression and tension
   J. Kokkonen, V.-T. Kuokkala and M. Isakov ......................................... 647

Deformation behavior of sleeved polymer core projectiles during Taylor impact
Industrial Applications

Resistance of composite materials and tank structures to the impact and hydraulic ram pressure generated by a ballistic projectile
E. Deletombe, J. Fabi and J. Dupas .................................................. 663

Fiber-reinforced ultra-high performance concrete under tensile loads
O. Millon, W. Riedel, K. Thoma, E. Fehling and M. Nöldgen .................. 671

Ground collisions of high-speed vehicles and soft bodies
S. Yoshie, M. Sakai, T. Murakami and A. Katayama ............................ 679

Dynamic behaviour of laterally loaded pultruded composite beams
J.A. Epaarachchi and P. Birt .......................................................... 687

Impact behaviour of the high-strength aluminium alloy AA7075-T651
T. Borvik, H. Aunehaugen and O.S. Hopperstad ................................. 695

Micromechanical approach of the dynamic behavior of a high impact PP and a
PP compound: Recycling and pollution effects
N. Bahlouli, C. Gauthier, J.M. Pelletier and D. Pessey ......................... 703

Study of blast load on recyclable empty metal cans
S. Palanivelu, W. Van Paepegem, J. Degrieck, K. De Wolf, J. Vantomme,
D. Kakogiannis, J. Van Ackeren, D. Van Hemelrijck and J. Wastlits ........ 709

Nano nickel strengthened open cell metal foams under quasistatic and dynamic loading
A. Jung, H. Natter, R. Hempelmann and E. Lach ................................ 717

Progressive crushing of a fiber reinforced composite crash-box for a racing car
S. Boria and G. Forasassi .............................................................. 725

Dynamic tensile properties of mild steel sheets after strain aging
N. Kojima, K. Mimura and T. Umeda .............................................. 733

Dynamic elastic buckling loads of slender rods and their dependence on geometrical
features of specimens at intermediate impact velocities
K. Mimura, T. Umeda, I. Riku, M. Yu and Y. Uchida .......................... 741

Behaviour of Roma Plastilina upon blunt projectile impact
R. Munusamy and D.C. Barton ...................................................... 749

Electromagnetic phenomena associated with dynamic deformation and fracture
of rocks
K. Watanabe, K. Ogawa, K. Tanaka, H. Kobayashi and K. Horikawa .......... 757

Influence of the manufacturing process on the self-healing behavior of ionomers
T. Haase, M. Wicklein and K. Thoma ............................................. 765

Numerical axial impact study of pultruded circular and square composite tubes
S. Palanivelu, W. Van Paepegem, J. Degrieck, D. Kakogianni, J. Van Ackeren,
D. Van Hemelrijck, J. Wastlits, K. De Wolf and J. Vantomme ............... 771

Force based analysis on the instrumented Charpy impact and its industrial application
J. Fang and F.L. Ding ................................................................. 779

Structural response of thin-walled austenitic pipes to radiolysis gas detonations
S. Offermanns, E. Roos and W. Stadtmüller ..................................... 785
### Static and impact-dynamic characterization and modeling of multiphase TRIP steels
J. Van Slycken, J. Bouquerel, P. Verleysen, K. Verbeken, J. Degrieck and Y. Houbaert

Effect of pre-straining on localisation and fracture of dual-phase steel at elevated rates of strain
V. Tarigopula, O. Hopperstad, A. Clausen and M. Langseth

Rate effects of high performance fibre reinforced cementitious composite under tensile loading
E. Cadoni, M. Dotta, D. Forni, A. Meda and G.A. Plizzari

Effect of cased ammunition explosions on RC structures
J. Mediavilla, J. Weerheijm, J.C.A.M. van Doormaal and R.M. Rhijnsburger

Rigid-plastic seismic design of reinforced concrete structures to multiple earthquake excitations
F.C. Lin, L.G. Yun and Z.S. Yuan

Strain rate dependence of dynamic flow stress of 7075 aluminium alloy at very high strain rates
K. Sakino

About a possible criterion of limiting plasticity of structural metal alloys
M.A. Syrunin and A.G. Fedorenko

Dynamic response of a steel tube to blast
J. Malachowski

Dynamic constitutive relationship of lead-free solder alloys based on Johnson-Cook model with thermal effect
X.Y. Niu, T. Chen, Z.G. Li and X.F. Shua

Mechanical behaviour of Inconel 713LC at different strain rates and high temperatures
F. Galvez, N. Garcia, D. Cendon, A. Enfedaque and V. Sanchez-Galvez

Impact behavior and fracture of jointed steel plates
M. Daimaruya, H. Fujiki and Y. Uemura

Hybrid and combined sheet-stamping technologies combining static and dynamic loads
V. Glushchenkov and F. Grechnikov

Ballistic performance of dry stacked flax fabrics
E. Delcourt, L. Gilson, L. Rabet and M. Pirlot

### Bio-Mechanics

Characterization of pressure wave propagation in biological tissues
M. Benoit, J.H. Giovanola, A. Curnier, K. Agbeviade and M. Donnet

Dynamic behavior and microstructural properties of cancellous bone
S. Laporte, F. David, V. Bousson and S. Pattotatto

A tapered striker pulse shaping technique for uniform strain rate dynamic compression of bovine bone
T.J. Cloete, A. van der Westhuizen, S. Kok and G.N. Nurick
