Part I: Introduction 3
1. Overview of Artificial Intelligence 3
   1.0 Introduction 4
      1.0.1 What Is Artificial Intelligence? 4
      1.0.2 What Is Thinking? What Is Intelligence? 5
   1.1 The Turing Test 7
      1.1.1 Definition of the Turing Test 7
      1.1.2 Controversies and Criticisms of the Turing Test 9
         Block's Criticism of the Turing Test 9
         Searle's Criticism: The Chinese Room 9
   1.2 Strong AI versus Weak AI 12
   1.3 Heuristics 12
      1.3.1 The Diagonal of a Rectangular Solid: Solving a Simpler, 13
         but Related Problem
      1.3.2 The Water Jug Problem: Working Backward 13
   1.4 Identifying Problems Suitable for AI 14
   1.5 Applications and Methods 17
      1.5.1 Search Algorithms and Puzzles 18
      1.5.2 Two-Person Games 19
      1.5.3 Automated Reasoning 20
      1.5.4 Production Rules and Expert Systems 21
      1.5.5 Cellular Automata 22
      1.5.6 Neural Computation 23
      1.5.7 Genetic Algorithms 24
      1.5.8 Knowledge Representation 24
      1.5.9 Uncertainty Reasoning 26
1.6 Early History of AI
   1.6.1 Logicians and Logic Machines 28
1.7 Recent History of AI to the Present
   1.7.1 Games 30
   1.7.2 Expert Systems 31
   1.7.3 Neural Computing 32
   1.7.4 Evolutionary Computation 32
   1.7.5 Natural Language Processing 33
   1.7.6 Bioinformatics 35
1.8 AI in the New Millennium 36
1.9 Chapter Summary 38

Part II: Fundamentals 45
2. Uninformed Search Intelligence
   2.0 Introduction: Search in Intelligent Systems 48
   2.1 State-Space Graphs
      2.1.1 The False Coin Problem 49
   2.2 Generate-and-Test Paradigm
      2.2.1 Backtracking 52
      2.2.2 The Greedy Algorithm 55
      2.2.3 The Traveling Salesperson Problem 57
   2.3 Blind Search Algorithms
      2.3.1 Depth First Search 59
      2.3.2 Breadth First Search 61
   2.4 Implementing and Comparing Blind Search Algorithms
      2.4.1 Implementing a Depth First Search Solution 63
      Algorithm: Breadth First Search 65
      2.4.2 Implementing a Breadth First Search Solution 65
      2.4.3 Measuring Problem-Solving Performance
         Completeness 66
         Optimality 66
         Time Complexity 66
         Space Complexity 66
      2.4.4 Comparing dfs and bfs 67
   2.5 Chapter Summary 71

3. Informed Search
   3.0 Introduction 77
   3.1 Heuristics 79
   3.2 Informed Search Algorithms (Part 1) – Finding any Solution
      3.2.1 Hill Climbing 86
      3.2.2 Steepest-Ascent Hill Climbing
         The Foothills Problem 88
         The Plateau Problem 88
         The Ridge Problem 88
3.3 The Best-First Search
3.4 The Beam Search
3.5 Additional Metrics for Search Algorithms
3.6 Informed Search (Part 2) – Finding an Optimal Solution
    3.6.1 Branch and Bound
    3.6.2 Branch and Bound with Underestimates
    3.6.3 Branch and Bound with Dynamic Programming
    3.6.4 The A* Search
3.7 Informed Search (Part 3) – Advanced Search Algorithms
    3.7.1 Constraint Satisfaction Search
    3.7.2 AND/OR Trees
    3.7.3 The Bidirectional Search
3.8 Chapter Summary
4. Search Using Games
    4.0 Introduction
    4.1 Game Trees and Minimax Evaluation
        4.1.1 Heuristic Evaluation
        4.1.2 Minimax Evaluation of Game Trees
    4.2 Minimax with Alpha-Beta Pruning
    4.3 Variations and Improvements to Minimax
        4.3.1 Negamax Algorithm
        4.3.2 Progressive Deepening
        4.3.3 Heuristic Continuation and the Horizon Effect
    4.4 Games of Chance and the Expectiminimax Algorithm
    4.5 Game Theory
        4.5.1 The Iterated Prisoner’s Dilemma
    4.6 Chapter Summary
5. Logic in Artificial Intelligence
    5.0 Introduction
    5.1 Logic and Representation
    5.2 Propositional Logic
        5.2.1 Propositional Logic – Basics
        5.2.2 Arguments in the Propositional Logic
        5.2.3 Proving Arguments in the Propositional Logic Valid – A Second Approach
    5.3 Predicate Logic – Introduction
        5.3.1 Unification in the Predicate Logic
        5.3.2 Resolution in the Predicate Logic
        5.3.3 Converting a Predicate Expression to Clause Form
    5.4 Several Other Logics
        5.4.1 Second Order Logic
        5.4.2 Non-monotonic Logic
        5.4.3 Fuzzy Logic
        5.4.4 Modal Logic
    5.5 Chapter Summary
6. Knowledge Representation

6.0 Introduction
6.1 Graphical Sketches and the Human Window
6.2 Graphs and the Bridges of Königsberg Problem
6.3 Search Trees
   6.3.1 Decision Tree
6.4 Representational Choices
6.5 Production Systems
6.6 Object Orientation
6.7 Frames
6.8 Scripts and the Conceptual Dependency System
6.9 Semantic Networks
6.10 Associations
6.11 More Recent Approaches
   6.11.1 Concept Maps
   6.11.2 Conceptual Graphs
   6.11.3 Baecker’s Work
6.12 Agents: Intelligent or Otherwise
   6.12.1 A Little Agent History
   6.12.2 Contemporary Agents
      KaZaA
      Monitoring Agent: Spector Pro
      Zero Intelligence Plus (Zip)
      HAL: The Next Generation Intelligent Room
   6.12.3 The Semantic Web
   6.12.4 The Future – According to IBM
   6.12.5 Authors’ Perspective
6.13 Chapter Summary

7. Production Systems

7.0 Introduction
7.1 Background
   7.1.1 Strong Methods vs. Weak Methods
7.2 Basic Examples
7.3 The CarBuyer System
   7.3.1 Advantages of Production Systems
7.4 Production Systems and Inference Methods
   7.4.1 Conflict Resolution
   7.4.2 Forward Chaining
      Examples of Forward Chaining
   7.4.3 Backward Chaining
      Examples of Backward Chaining
7.5 Production Systems and Cellular Automata
7.6 Stochastic Processes and Markov Chains
7.7 Chapter Summary
Part III: Knowledge-Based Systems

8. Uncertainty in AI
   8.0 Introduction
   8.1 Fuzzy Sets
   8.2 Fuzzy Logic
   8.3 Fuzzy Inferences
   8.4 Probability Theory and Uncertainty
   8.5 Chapter Summary

9. Expert Systems
   9.0 Introduction
   9.1 Background
      9.1.1 Human and Machine Experts
   9.2 Characteristics of Expert Systems
   9.3 Knowledge Engineering
   9.4 Knowledge Acquisition
   9.5 Classic Expert Systems
      9.5.1 DENDRAL
      9.5.2 MYCIN
      9.5.3 EMYCIN
      9.5.4 PROSPECTOR
      9.5.5 Fuzzy Knowledge and Bayes’ Rule
   9.6 Methods for Efficiency
      9.6.1 Demon Rules
      9.6.2 The Rete Algorithm
   9.7 Case-Based Reasoning
   9.8 More Recent Expert Systems
      9.8.1 Systems for Improving Employment Matching
      9.8.2 An Expert System for Vibration Fault Diagnosis
      9.8.3 Automatic Dental Identification
      9.8.4 More Expert Systems Employing Case-Based Reasoning
   9.9 Chapter Summary

10. Neural Networks
   10.0 Introduction
   10.1 Rudiments of Artificial Neural Networks
   10.2 McCulloch–Pitts Network
   10.3 The Perceptron Learning Rule
   10.4 The Delta Rule
   10.5 Backpropagation
   10.6 Implementation Concerns
      10.6.1 Pattern Analysis
      10.6.2 Training Methodology
   10.7 Discrete Hopfield Networks
   10.8 Application Areas
   10.9 Chapter Summary
# Part IV: Advanced Topics

12. Natural Language Understanding

## 12.0 Introduction

## 12.1 Overview: The Problems and Possibilities of Language

### 12.1.1 Ambiguity

## 12.2 History of Natural Language Processing (NLP)

### 12.2.1 Foundations (1940s and 1950s)

### 12.2.2 Symbolic vs. Stochastic Approaches (1957–1970)

### 12.2.3 The Four Paradigms: 1970–1983

### 12.2.4 Empiricism and Finite-State Models

### 12.2.5 The Field Comes Together: 1994–1999

### 12.2.6 The Rise of Machine Learning

## 12.3 Syntax and Formal Grammars

### 12.3.1 Types of Grammars

- Type 0: Recursively Enumerable Languages
- Type 1: Context Sensitive Languages
- Type 2: Context-Free Languages
- Type 3: Regular Languages

### 12.3.2 Syntactic Parsing: The CYK Algorithm

## 12.4 Semantic Knowledge and Extended Grammars

### 12.4.1 Transformational Grammar

### 12.4.2 Systemic Grammar

### 12.4.3 Case Grammars

### 12.4.4 Semantic Grammars

### 12.4.5 Schank’s Systems

- MARGIE
- Inference Mode
- Paraphrase Mode
- SAM
- PAM

## 12.5 Statistical Methods in NLP

### 12.5.1 Statistical Parsing

### 12.5.2 Machine Translation (Revisited) and IBM’s Candide System

### 12.5.3 Word Sense Disambiguation

## 12.6 Probabilistic Models for Statistical NLP

### 12.6.1 Hidden Markov Models

### 12.6.2 The Viterbi Algorithm
D. Applications and Data
   D.1 Examples of Applications
      1. Expert Systems
      2. Neural Networks
      3. Robotics
      4. Fuzzy Logic
   D.2 Data For Neural Training Exercises
   D.3 An Overview of Advanced Computer Games
      1. The Rules and Objectives of Bridge
      2. The Rules and Objectives of Chess
      3. The History of Advanced Computer Games
E. Solutions to Selected Exercises

Index
