# Contents

*Series Introduction*  
*Preface*  

1 **Aging Power Delivery Infrastructures**  
1.1 Introduction and Overview  
1.2 Aging Infrastructure Management Must Become A Mainstream Part of Utility Operations?  
1.3 What is the Infrastructure Involved?  
1.4 Characteristics of an Aging Infrastructure  
1.5 Power Delivery Systems  
1.6 The Business Environment Has Changed  
1.7 Five Factors Contribute to Aging Infrastructure Problems  
1.8 Condition, Criticality, and Consequences  
1.9 Concluding Remarks  
References and Bibliography  

2 **Power Delivery Systems**  
2.1 Introduction  
2.2 T&D System’s Mission  
2.3 The “Laws of T&D”  
2.4 Levels of the T&D System  
2.5 Utility Distribution Equipment  
2.6 T&D Costs  
2.7 Types of Delivery System Design

xi
| 2.8 | Smart Grid | 96 |
| 2.9 | Conclusion | 98 |
|      | References and Bibliography | 100 |
| 3   | Customer Demand for Power and Reliability of Service | 103 |
| 3.1 | The Two-Q's: Quantity and Quality of Power | 103 |
| 3.2 | Electric Consumer Need for Quantity of Power | 104 |
| 3.3 | Electric Consumer Need for Quality of Power | 113 |
| 3.4 | Two-Q Analysis: Quantity and Quality of Power Are Both Important Aspects of Consumer Value | 129 |
| 3.5 | Conclusion and Summary | 132 |
|      | References and Bibliography | 133 |
| 4   | Power System Reliability and Reliability of Service | 135 |
| 4.1 | Introduction | 135 |
| 4.2 | Outages Cause Interruptions | 137 |
| 4.3 | Reliability Indices | 141 |
| 4.4 | Reliability and Contingency Criteria for Planning | 146 |
| 4.5 | Cost Is Usually *the* Major Consideration | 151 |
| 4.6 | Two-Q Analysis of Power Systems | 155 |
| 4.7 | Conclusion and Summary | 157 |
|      | References and Bibliography | 158 |
| 5   | Cost and Economic Evaluation | 161 |
| 5.1 | Introduction | 161 |
| 5.2 | Costs | 162 |
| 5.3 | Time Value of Money | 165 |
| 5.4 | Decision Bases and Cost-Effectiveness Evaluation | 181 |
| 5.5 | Budget-Constrained Planning: Marginal Benefit vs. Cost Analysis | 182 |
## Contents

5.6  Asset Management and Pareto Analysis  195
5.7  Conclusion  200
     References and Bibliography  201

6  Equipment Inspection, Testing, and Diagnostics  203
   6.1  Introduction  203
   6.2  Inspection, Testing, and Diagnostic Evaluation  203
   6.3  Equipment Testing and Diagnosis Methods  213
   6.4  Tests and Diagnosis of Insulating Oil  221
   6.5  On-Line and Real-Time Monitoring and Testing  229
   6.5  Summary and Final Comments  231
        References  232

7  Aging Equipment and Its Impacts  233
   7.1  Introduction  233
   7.2  Equipment Aging  234
   7.3  Equipment Failure Rate Increases with Age  249
   7.4  Impact of Escalating Failure Rates  256
   7.5  Summary of Key Points  262
        References  263

8  Obsolete System Structures  265
   8.1  Introduction  265
   8.2  Obsolete Systems Layouts  266
   8.3  Impacts on the Sub-transmission – Substation Level  272
   8.4  Feeder System Impacts  278
   8.5  “Fixes” For Outdated System Structures  292
   8.6  Summary of Key Points  295
        References and Bibliography  296
9 Traditional Reliability Engineering Tools and Their Limitations 297
  9.1 Introduction 297
  9.2 Contingency-Based Planning Methods 298
  9.3 Limitations of N-1 Methodology 304
  9.4 Other Planning Related Concerns 317
  9.5 Summary and Conclusion 326

References and Bibliography 330

10 Primary Distribution Planning and Engineering Interactions 331
  10.1 Introduction 331
  10.2 Distribution Planning and the Perceived Role of Distribution 332
  10.3 Flexibility and Effectiveness in Feeder Level Planning 342
  10.4 Smart Distribution Systems 355
  10.5 Conclusion 333

References and Bibliography 360

11 Equipment Condition Assessment 361
  11.1 Introduction 361
  11.2 What Does “Condition” Mean? 362
  11.3 Analysis, Modeling, and Prediction 367
  11.4 Power Transformers 374
  11.5 Switchgear and Circuit Breakers 381
  11.6 Underground Equipment and Cables 384
  11.7 Overhead Lines and Associated Equipment 387
  11.8 Service Transformers and Service Circuits 393
  11.9 Evaluating and Prioritizing Equipment Condition 394
  11.10 Condition Tracking 403
  11.11 Summary and Final Comments 406
Contents

References and Bibliography 407

12 Optimization
12.1 Introduction 409
12.2 Prioritizing Inspection, Maintenance, and Service 410
12.3 Reliability Centered Maintenance 414
12.4 Basic Reliability-Centered Prioritization 418
12.5 Prioritization of the Type of Maintenance 429
12.6 Practical Aspects for Implementation 437
12.7 Extending Reliability-Centered Prioritization and Optimization to Other Operations Functions 445
12.8 Optimization 450
12.9 Conclusion and Recommendations 454

References and Bibliography 459

13 Planning Methods for Aging T&D Infrastructures 457
13.1 Introduction 457
13.2 Planning: Finding the Best Alternative 460
13.3 Short- and Long-Range Planning 470
13.4 The T&D Planning Process 480
13.5 The Systems Approach 500
13.6 Summary of Planning in an Aging T&D Infrastructure 504

References and Bibliography 506

14 Reliability Can Be Planned and Engineered 507
14.1 Introduction 507
14.2 Reliability Can Be Engineered 510
14.3 Methods for Distribution System Reliability Assessment 514
14.4 Application of Analytical Simulation for Detailed Reliability
## Contents

Assessment 518  
14.5 Use of a Hybrid Analytical Solution 524  
14.6 Conclusion and Key Points 532  
References and Bibliography 533

### 15  Six Aging Infrastructure Management Stories 537

15.1 Introduction 537  
15.2 Four Philosophies of Ownership 538  
15.3 Comparing the Four Ownership Philosophies 563  
15.4 Organizational culture 567  
15.5 Six Cases: “Success” from Six Different Perspectives 574  
  15.5.1 Big States Electric – Asset Management 574  
  15.5.2 Mid-State Electric – Reliability-Centered Maintenance 579  
  15.5.3 International Bulk Petroleum – Buy, Burn, and Bash 583  
  15.5.4 Big State University System – Standards Based 586  
  15.5.5 Third-World Orphan Rescue Foundation – Uniquely Standards Based 589  
  15.5.6 Huey Longwaites International Airport – Buy, Burn, and Bash 594  
15.6 Conclusion 596

### 16  Managing an Aging Infrastructure 599

16.1 Introduction 599  
16.2 An Inauspicious Beginning 600  
16.3 Overview of Approach 603  
16.4 The Data Chase 604  
16.5 Building the Historical Model of Pole Ownership 612  
16.6 Building the Predictive Model 623  
16.7 What the Model Says About the Future 632
