Preface xxvii

Part I Introduction to fluidization science and technology  1

1 Overview of fluidization science and fluidized bed technologies  3
   M. Horio, Tokyo University of Agriculture and Technology, Japan
   1.1 Introduction  3
   1.2 Fluidization as a fundamental phenomenon and its formulation  8
   1.3 Historical development of fluidization technology  16
   1.4 Historical development of fluidization science  24
   1.5 Conclusion and future trends  36
   1.6 Acknowledgements  36
   1.7 References  36
   1.8 Appendix: notation  40

2 Particle characterization and behavior relevant to fluidized bed combustion and gasification systems  42
   D. Wang and L.-S. Fan, The Ohio State University, USA
   2.1 Introduction  42
   2.2 Characterization of particles  43
   2.3 Fluid–particle interactions  55
   2.4 Particle–particle interactions  60
   2.5 Particle fluidization characteristics  67
   2.6 Particle property effects in a novel combustion system  71
   2.7 Conclusion  72
   2.8 Sources of further information and advice  72
   2.9 References  73
6 Attrition phenomena relevant to fluidized bed combustion and gasification systems 254
F. Scala and R. Chirone, National Research Council, Italy and P. Salatino, University of Naples ‘Federico II’, Italy

6.1 Introduction 254
6.2 Attrition mechanisms in fluidized beds 256
6.3 Attrition of solid fuels during conversion 267
6.4 Attrition of sorbent particles 274
6.5 Attrition of other bed solids 284
6.6 Attrition models 288
6.7 Incorporation of attrition in fluidized bed models 294
6.8 Conclusion 298
6.9 References 300
6.10 Appendix: notation 314

Part II Fundamentals of fluidized bed combustion and gasification 317

7 Conversion of solid fuels and sorbents in fluidized bed combustion and gasification 319
F. Scala and R. Solimene, National Research Council, Italy and F. Montagnaro, University of Naples ‘Federico II’, Italy

7.1 Introduction 319
7.2 Solid fuel properties in fluidized beds 320
7.3 Fuel devolatilization and conversion of volatiles 325
7.4 Char combustion and gasification reactions 335
7.5 Mechanisms controlling char conversion rate 337
7.6 Char particle temperature 349
7.7 Calcium-based sorbents for in-situ desulphurization (ISD) 352
7.8 Reactivation by hydration of spent calcium-based sorbents 359
7.9 Other sorbent conversion processes in fluidized beds 364
7.10 Conclusion 367
7.11 Acknowledgment 368
7.12 References 368
7.13 Appendix: notation 386

8 Conversion of liquid and gaseous fuels in fluidized bed combustion and gasification 388
M. Miccio, Università di Salerno, Italy and F. Miccio, Istituto di Ricerche sulla Combustione, Italy

8.1 Introduction 388
8.2 Fuels 389
Contents

8.3 Fuel feeding 393
8.4 Fluidized bed combustion (FBC) of gaseous fuels 397
8.5 FBC of liquid fuels 403
8.6 Emissions 409
8.7 Combustion mechanism of liquid fuels 415
8.8 Conclusion and future trends 426
8.9 Acknowledgments 430
8.10 References 430
8.11 Appendix: nomenclature 433

9 Pollutant emissions and their control in fluidised bed combustion and gasification 435
I. Gulyurtlu, F. Pinto, P. Abelha, H. Lopes and A. T. Crujeira, LNEG, Portugal

9.1 Introduction 435
9.2 Emissions from fluidised bed combustion (FBC) processes 436
9.3 Methods for controlling emissions during combustion and post-combustion 445
9.4 Emissions from fluidised bed gasification processes 456
9.5 Control of emissions during gasification and post-gasification 460
9.6 Deposition and environmental issues associated with residual ash 466
9.7 Future trends 470
9.8 References and further reading 472

10 Fluidized bed reactor design and scale-up 481
T. M. Knowlton, Particulate Solid Research Inc., USA

10.1 Introduction 481
10.2 General scale-up procedure 487
10.3 Selecting mathematical models and fluidization regimes for bubbling and turbulent fluidized beds 488
10.4 Selecting mathematical models and fluidization regimes for circulating fluidized beds 495
10.5 Constructing pilot, demonstration and commercial plants 505
10.6 Circulating fluidized bed combustor scale-up and other considerations 508
10.7 Conclusion 517
10.8 References 518
10.9 Appendix: notation 521

## Part III Fluidized bed combustion and gasification technologies

### 14 Atmospheric (non-circulating) fluidized bed (FB) combustion

B. Leckner, Chalmers University of Technology, Sweden

#### 14.1 Introduction

# Contents

20.5 Chemical looping with oxygen uncoupling (CLOU) 909  
20.6 Development of fluidized bed reactor system for CLC 910  
20.7 Advantages and limitations of CLC 917  
20.8 Future trends 918  
20.9 Conclusion 919  
20.10 Sources of further information and advice 920  
20.11 References 921  

21 Calcium looping for CO₂ capture in combustion systems 931  
J. C. Abanades, Spanish Research Council (CSIC), Spain  
21.1 Introduction 931  
21.2 Basic principles 932  
21.3 Development of calcium looping (CaL) fluidized bed processes 942  
21.4 Application of CaL at pilot scale 951  
21.5 Advantages and limitations 957  
21.6 Conclusion 962  
21.7 Sources of further information and advice 962  
21.8 References 963  
21.9 Appendix: notation 970  

22 Sorption-enhanced gasification 971  
C. Pfeifer, University of Natural Resources and Life Sciences, Vienna, Austria, formerly Vienna University of Technology, Austria  
22.1 Introduction 971  
22.2 Fundamentals of sorption-enhanced gasification 973  
22.3 Thermodynamics of sorption-enhanced gasification 979  
22.4 Limitations 980  
22.5 Literature review about research and commercial examples: experiments on a laboratory scale (<100 kWth) 983  
22.6 Literature review about research and commercial examples: experiments on a pilot scale (≥100 kWth) 987  
22.7 Literature review about research and commercial examples: experiments on an industrial scale 992  
22.8 Conclusion 996  
22.9 Sources of further information and advice 997  
22.10 References 997
