# Contents

<b>1</b>	<b>The Basic Ideas</b>	<b>1</b>
1.1	Things to Keep in Mind	1
1.2	Why Is Energy So Important?	5
1.3	Quantization Is Everywhere	12
1.4	Thermal Energies and Populations	22
1.5	Classical Energy Hyperspheres	35
	<i>Homework Problems</i>	43
<b>2</b>	<b>Introduction to Chemical Thermodynamics</b>	<b>49</b>
2.1	What Is Thermodynamics Good For?	49
2.2	The Laws of Thermodynamics	53
2.3	Important Ideal Gas Examples	60
	<i>Homework Problems</i>	76
<b>3</b>	<b>Axiomatic Foundations of Thermodynamics</b>	<b>81</b>
3.1	Fundamental Equation and Postulates	81
3.2	Temperature and Thermal Equilibrium	92
3.3	Chemical and Phase Equilibria	94
3.4	Euler and Gibbs-Duhem Relations	103
3.5	Transformed Potential Functions	106
3.6	Other Sorts of Thermodynamic Work	112
	<i>Homework Problems</i>	114
<b>4</b>	<b>Thermodynamic Calculation Strategies and Applications</b>	<b>119</b>
4.1	Reduction of Thermodynamic Derivatives	119
4.2	Chemical Reaction Thermodynamics	128
4.3	Self-Assembly Thermodynamics	132
4.4	Spontaneous Consequences	137
	<i>Homework Problems</i>	147
<b>5</b>	<b>Nonideal Systems and Computer Simulations</b>	<b>151</b>
5.1	Quantifying Nonidealities	151
5.2	Simple Models of Molecular Fluids	154
5.3	Supermolecule Statistical Mechanics	168
5.4	Mixed Points of View on Entropy	173

5.5	Kirkwood, Widom, and Jarzynski	179
	<i>Homework Problems</i>	190
<b>6</b>	<b>Introduction to Quantum Mechanics</b>	195
6.1	The Dawn of Quantum Phenomena	195
6.2	The Rise of Wave Mechanics	196
6.3	Wave Equations and Eigenfunctions	198
6.4	Quantum Operators and Observables	203
6.5	Formal Postulates of Quantum Mechanics	221
	<i>Homework Problems</i>	224
<b>7</b>	<b>Simple Systems and Chemical Applications</b>	227
7.1	Free, Confined, and Obstructed Particles	227
7.2	Quantum Harmonic Oscillators	240
7.3	Raising and Lowering Operators	246
7.4	Eigenvectors, Brackets, and Matrices	248
7.5	Three-Dimensional Systems	251
	<i>Homework Problems</i>	260
<b>8</b>	<b>Atoms and Spinning Particle-Waves</b>	265
8.1	The Hydrogen Atom	265
8.2	Spin Angular Momentum	272
8.3	Fermi, Bose, and Pauli Exclusion	278
8.4	Multielectron Atoms and the Periodic Table	282
	<i>Homework Problems</i>	289
<b>9</b>	<b>Covalent Bonding and Optical Spectroscopy</b>	293
9.1	Covalent Bond Formation	293
9.2	Molecular Bonding Made Easy	304
9.3	Time-Dependent Processes	311
9.4	Optical Spectroscopy	315
9.5	Introduction to <i>Ab Initio</i> Methods	328
	<i>Homework Problems</i>	335
<b>10</b>	<b>Chemical and Photon-Molecule Reactions</b>	341
10.1	Gas Phase Reaction Equilibria	341
10.2	Principles of Reaction Dynamics	352
10.3	Prediction of Reaction Rate Constants	355
10.4	Photon-Molecule Reactions	364
	<i>Homework Problems</i>	372
	APPENDICES	377
<b>A</b>	<b>Answers to Problems That Test Your Understanding</b>	379
<b>B</b>	<b>Fundamental Constants and Mathematical Identities</b>	385
<b>C</b>	<b>Periodic Table</b>	389
	Index	391
