# Table of Contents

Message from the Program Committee Co-chairs and Steering Committee Chair ................................................................. ix
Organizing Committee ......................................................................................................................... x
Reviewers ................................................................................................................................................ xi

## Best Student Paper (Long Papers)

Six-Shot Multicast – A Location-Aware Strategy for Efficient Message Routing in MANETs ................................................... 1

_Benoit Garbinato, Adrian Holzer, and François Vessaz_

## Performance Optimization (Long Papers)

Improved Architectures for Range Encoding in Packet Classification System ................................................................. 10

_Xin He, Jorgen Peddersen, and Sri Parameswaran_

AGGRO: Boosting STM Replication via Aggressively Optimistic Transaction Processing ................................................................. 20

_Roberto Palmieri, Francesco Quaglia, and Paolo Romano_

Cost-Based Optimization of Buffer Size in M/G/1/N Systems under Different Service-Time Distributions ............................................. 28

_Derek Doran, Lester Lipsky, and Steve Thompson_

## Fault and Failure Management (Long Papers)

Distributed Clustering Algorithms for Lossy Wireless Sensor Networks ................................................................. 36

_Zhexi Pan, Yuanyuan Yang, and Dawei Gong_

Modeling Fast Link Failure Detection for Dependable Wireless Mesh Networks ........................................................................... 44

_Timo Lindhorst, Georg Lukas, and Edgar Nett_
Fault-Tolerant Deadlock-Free Adaptive Routing for Any Set of Link and Node Failures in Multi-cores Systems

Fabien Chaix, Dimiter Avresky, Nacer-Eddine Zergainoh, and Michael Nicolaidis

Cloud and Web Services (Long Papers)

Detection of Performance Anomalies in Web-Based Applications

João Paulo Magalhães and Luis Moura Silva

Ecosystem of Cloud Naming Systems: An Approach for the Management and Integration of Independent Cloud Name Spaces

Antonio Celesti, Massimo Villari, and Antonio Puliafito

Colocation as a Service: Strategic and Operational Services for Cloud Colocation

Vatche Ishakian, Raymond Sweha, Jorge Londoño, and Azer Bestavros

SOAP Web Services Compression Using Variable and Fixed Length Coding

Dhiah Al-Shammary and Ibrahim Khalil

Security (Long Papers)

Edmond Holohan and Michael Schukat

GROK: A Practical System for Securing Group Communications

Joseph A. Cooley, Roger I. Khazan, Benjamin W. Fuller, and Galen E. Pickard

Quantification of Attackers Activities on Servers Running Web 2.0 Applications

Katerina Goseva-Popstojanova, Risto Pantev, Ana Dimitrijevikj, and Brandon Miller

Performance Modelling and Assessment (Long Papers)

Design of an Extensible Network Testbed

Charlie Wiseman, Jyoti Parwatikar, Ken Wong, John DeHart, and Jonathan Turner

A Performance Model of Gossip-Based Update Propagation

Imad Antonios, Reetu Dhar, Feng Zhang, and Lester Lipsky

Assessing the Impact of a Realistic Radio Propagation Model on VANET Scenarios Using Real Maps

Francisco J. Martinez, Manuel Fogue, Manuel Coll, Juan-Carlos Cano, Carlos T. Calafate, and Pietro Manzoni

Algorithms (Long Papers)

Time-FreeAuthenticated Byzantine Consensus

Hamouma Moumen and Achour Mostefaoui

Improving Conjunctive Query Routing in Unstructured P2P Networks

Wai Gen Yee, Linh Nguyen, and Ophir Frieder
Best Paper (Long Papers)

ASE: Authenticated Statement Exchange ................................................................. 155

Benjamin W. Fuller, Roger I. Khazan, Joseph A. Cooley, Galen E. Pickard, and Daniil Utin

Cloud Computing and Web Services (Short Papers)

Prediction of Job Resource Requirements for Deadline Schedulers to Manage
High-Level SLAs on the Cloud .................................................................................. 162

Gemma Reig, Javier Alonso, and Jordi Guitart

Under the Cloud: A Novel Content Addressable Data Framework for Cloud
Parallelization to Create and Virtualize New Breeds of Cloud Applications .................. 168

Amir H. Basirat, Anang H. Mohammad Amin, and Asad I. Khan

Dynamic Web Service Composition Middleware: A New Approach for QoS Guarantees ............................................................................................................. 174

Bruno T. Kuehne, Julio C. Estrella, Maycon L.M. Peixoto, Thiago C. Tavares,
Regina H.C. Santana, and Marcos J. Santana

Multi-level Multi-server Task Assignment with Work-Conserving Migration .................. 178

Malith Jayasinghe, Zahir Tari, and Panlop Zeephongsekul

Security (Short Papers)

Understanding the Vulnerabilities of a SOA Platform - A Case Study ......................... 182

Andrew Gronosky, Michael Atighetchi, and Partha Pal

A Network Based Approach to Malware Detection in Large IT Infrastructures ................. 188

Brijesh Kumar and Constantine Katsinis

On the Integrity of Network Coding-Based Anonymous P2P File Sharing Networks ................................................................. 192

Paolo Gasti, Alessio Merlo, Giuseppe Ciaccio, and Giovanni Chiola

PwdIP-Hash: A Lightweight Solution to Phishing and Pharming Attacks ...................... 198

Baber Aslam, Lei Wu, and Cliff C. Zou

Wireless Sensor Networks and Mobile Ad Hoc Networks (Short Papers)

Anomaly Detection with Wireless Sensor Networks .................................................. 204

Nathalie Dessart, Hacène Fouchal, Philippe Hunel, and Nicolas Vidot

Performance Analysis of Optimal Packet Size for Congestion Control
in Wireless Sensor Networks ..................................................................................... 210

Naimah Yaakob, Ibrahim Khalil, and Jiankun Hu

QoS-enabled Video Streaming in Wireless Sensor Networks ....................................... 214

S. Guo and T.D.C. Little

A Decentralized Dynamic Sensor Activation Protocol for Chemical Sensor Networks ........ 218

Shanika Karunasekera, Champake Mendis, Alex Skvortsov, and Ajith Gunatilaka
Fault Tolerance (Short Papers)

Partition Participant Detector with Dynamic Paths in Mobile Networks .................................................................224
  Luciana Arantes, Pierre Sens, Gaët Thomas, Denis Conan, and Léon Lim
Improving Robustness of Network Fault Diagnosis to Uncertainty in Observations ..................................................................................................................................................................................229
  Jesper Grønbæk, Hans-Peter Schwefel, Andrea Ceccarelli, and Andrea Bondavalli
A Multi-core Approach to Providing Fault Tolerance for Non-deterministic Services .............................................................233
  Balázs Gerofi and Yutaka Ishikawa

Applications (Short Papers)

NetOdyssey - A New Tool for Real-Time Analysis of Network Traffic ..........................................................................................239
  Fábio D. Beirão, João V. Gomes, Pedro R.M. Inácio, Manuela Pereira, and Mário M. Freire
Location Awareness Rescue System: Support for Mountain Rescue Teams ..............................................................................243
  Panagiotis Georgopoulos, Ben McCarthy, and Christopher Edwards

Overlay Networks and Routing (Short Papers)

K-overlay: A Kautz Tree Structure for Video on Demand System .................................................................................................247
  Ubaid Abbasi and Toufik Ahmed
Dynamic Game-Play Arbitrators with 3D Voronoi Diagrams ........................................................................................................253
  Mahathir Almashor, Ibrahim Khalil, and Geoff Leach
Pareto-Based Optimization of Multicast Flows with QoS and Traffic Engineering Requirements .................................................................257
  Marcos L.P. Bueno and Gina M.B. Oliveira
Advanced Hashing with Hybrid Key Duplication for IP Address Lookup ..................................................................................261
  Rujroj Tiengtavat and Wei-Ming Lin
Evaluation of a Hardware-Software Codesign Technique of Network Protocol Stacks ..........................................................................265
  Taehoon Kim and Sungwoo Tak

TNC Workshop (Short Papers)

Redundancy Infrastructure for Service-Oriented Wireless Sensor Networks ........................................................................269
  Jana Neumann, Nils Hoeller, Christoph Reinke, and Volker Linnemann
Remote Reliable Services to Support Transactional Mobile Agents ............................................................................................275
  Izabela Moise, Michel Hurfin, Linda Zeghache, and Badache Nadjib
A Geographic Unicast Routing Algorithm Using no Location Service ..........................................................................................280
  Daniel Silvestre and Teresa Vazão

Author Index ..............................................................................................................................................................................286
