A TAYLOR & FRANCIS BOOK

Contents

Preface	xii
Preface to the First Edition	xiii
Preface to the Second Edition	xv
Glossary of Mathematical Symbols	xvii
1 Introduction: The Ways of Nature	1
2 Geometry	5
2.0 The Special and General Theories of Relativity	6
2.0.1 The Special Theory	6
2.0.2 The General Theory	11
2.1 Spacetime as a Differentiable Manifold	14
2.1.1 Topology of the Real Line \mathbb{R} and of \mathbb{R}^d	16
2.1.2 Differentiable Spacetime Manifold	18
2.1.3 Summary and Examples	20
2.2 Tensors	22
2.3 Extra Geometrical Structures	27
2.3.1 The Affine Connection	28
2.3.2 Geodesics	33
2.3.3 The Riemann Curvature Tensor	34
2.3.4 The Metric	36
2.3.5 The Metric Connection	38
2.4 What Is the Structure of Our Spacetime?	39
3 Classical Physics in Galilean and Minkowski Spacetimes	45
3.1 The Action Principle in Galilean Spacetime	46
3.2 Symmetries and Conservation Laws	50
3.3 The Hamiltonian	52
3.4 Poisson Brackets and Translation Operators	53
3.5 The Action Principle in Minkowski Spacetime	56
3.6 Classical Electrodynamics	61
3.7 *Geometry in Classical Physics	64
3.7.1 More on Tensors	65

3.7.2	Differential Forms, Dual Tensors and Maxwell's Equations	67
3.7.3	Configuration Space and Its Relatives	73
3.7.4	The Symplectic Geometry of Phase Space	75
3.8	*Hamiltonian Dynamics of Constrained Systems	79
3.8.1	A System with Second-Class Constraints	80
3.8.2	A System with a First-Class Constraint	87
3.8.3	General Constrained Systems	91
4	General Relativity and Gravitation	97
4.1	The Principle of Equivalence	97
4.2	Gravitational Forces	98
4.3	The Field Equations of General Relativity	102
4.4	The Gravitational Field of a Spherical Body	106
4.4.1	The Schwarzschild Solution	106
4.4.2	Time Near a Massive Spherical Body	108
4.4.3	Distances Near a Massive Spherical Body	110
4.4.4	Particle Trajectories Near a Massive Spherical Body	111
4.5	Black Holes	112
4.5.1	Schwarzschild Black Holes	113
4.5.2	*Mass and Surface Gravity of a Schwarzschild Black Hole	119
4.5.3	*Rotating Black Holes and Black-Hole Thermodynamics	124
5	Quantum Theory	141
5.0	Wave Mechanics	142
5.1	The Hilbert Space of State Vectors	145
5.2	Operators and Observable Quantities	148
5.3	Spacetime Translations and the Properties of Operators	151
5.4	Quantization of a Classical System	155
5.5	An Example: The One-Dimensional Harmonic Oscillator	157
6	Second Quantization and Quantum Field Theory	165
6.1	The Occupation-Number Representation	166
6.2	Field Operators and Observables	169
6.3	Lagrangian Formalism for Field Operators	171
6.4	Second Quantization for Fermions	173
7	Relativistic Wave Equations and Field Theories	177
7.1	The Klein-Gordon Equation	178
7.2	Scalar Field Theory for Free Particles	181
7.3	The Dirac Equation and Spin- $\frac{1}{2}$ Particles	183
7.3.1	The Dirac Equation	183
7.3.2	Lorentz Covariance and Spin	185
7.3.3	Some Properties of the γ Matrices	189

7.3.4	Conjugate Wavefunction and the Dirac Action	190
7.3.5	Probability Current and Bilinear Covariants	190
7.3.6	Plane-Wave Solutions	192
7.3.7	Massless Spin- $\frac{1}{2}$ Particles	193
7.4	Spinor Field Theory	194
7.5	Weyl and Majorana Spinors	197
7.6	Particles of Spin 1 and 2	202
7.6.1	Photons and Massive Spin-1 Particles	203
7.6.2	Gravitons	205
7.7	Wave Equations in Curved Spacetime	208
8	Forces, Connections and Gauge Fields	221
8.1	Electromagnetism	221
8.2	Non-Abelian Gauge Theories	227
8.3	Non-Abelian Theories and Electromagnetism	234
8.4	Relevance of Non-Abelian Theories to Physics	235
8.5	The Theory of Kaluza and Klein	236
9	Interacting Relativistic Field Theories	241
9.1	Asymptotic States and the Scattering Operator	242
9.2	Reduction Formulae	244
9.3	Path Integrals	247
9.3.1	Path Integrals in Non-Relativistic Quantum Mechanics	247
9.3.2	Functional Integrals in Quantum Field Theory	250
9.4	Perturbation Theory	253
9.5	Quantization of Gauge Fields	257
9.6	Renormalization	260
9.7	Quantum Electrodynamics	266
9.7.1	The Coulomb Potential	266
9.7.2	Vacuum Polarization	269
9.7.3	The Lamb Shift	271
9.7.4	The Running Coupling Constant	272
9.7.5	Anomalous Magnetic Moments	273
10	Equilibrium Statistical Mechanics	279
10.1	Ergodic Theory and the Microcanonical Ensemble	280
10.2	The Canonical Ensemble	285
10.3	The Grand Canonical Ensemble	287
10.4	Relation between Statistical Mechanics and Thermodynamics	289
10.5	Quantum Statistical Mechanics	295
10.6	Field Theories at Finite Temperature	299
10.7	Black-Body Radiation	302
10.8	The Classical Lattice Gas	304
10.9	Analogies between Field Theory and Statistical Mechanics .	306

11 Phase Transitions	311
11.1 Bose–Einstein Condensation	311
11.2 Critical Points in Fluids and Magnets	313
11.3 The Ising Model	319
11.4 Spontaneous Symmetry Breaking	321
11.5 The Ginzburg–Landau Theory	324
11.6 The Renormalization Group	327
11.7 The Ginzburg–Landau Theory of Superconductors	333
11.7.1 Spontaneous Breaking of Continuous Symmetries . .	333
11.7.2 Magnetic Effects in Superconductors	335
11.7.3 The Higgs Mechanism	337
12 Unified Gauge Theories of the Fundamental Interactions	341
12.1 The Weak Interaction	342
12.2 The Glashow–Weinberg–Salam Model for Leptons	347
12.3 Physical Implications of the Model for Leptons	352
12.4 Hadronic Particles in the Electroweak Theory	354
12.4.1 Quarks	354
12.4.2 Quarks in the Electroweak Theory	358
12.5 Colour and Quantum Chromodynamics	360
12.6 Loose Ends	366
12.6.1 The Higgs Boson	366
12.6.2 Massive Neutrinos	369
12.7 Grand Unified Theories	373
12.8 *Supersymmetry	381
12.8.1 The Wess–Zumino Model	382
12.8.2 Superfields	383
12.8.3 Spontaneous Supersymmetry Breaking	385
12.8.4 The Supersymmetry Algebra	388
12.8.5 Supersymmetric Gauge Theories and Supergravity .	393
12.8.6 Some Algebraic Details	397
13 Solitons and So On	401
13.1 Domain Walls and Kinks	401
13.2 The Sine–Gordon Solitons	410
13.3 Vortices and Strings	414
13.4 Magnetic Monopoles	424
14 The Early Universe	435
14.1 The Robertson–Walker Metric	436
14.2 The Friedmann–Lemaître Models	441
14.3 Matter, Energy and the Age of the Universe	445
14.4 The Fairly Early Universe	450
14.5 Nucleosynthesis	458
14.6 Recombination and the Horizon Problem	461

14.7	The Flatness Problem	463
14.8	Density Perturbations	464
14.8.1	Field Equations for Linear Perturbations	465
14.8.2	Perturbations of Ideal Fluids	467
14.8.3	Adiabatic Perturbations	469
14.8.4	Qualitative Features of the CMBR Anisotropies	470
14.9	The Very Early Universe	475
14.9.1	Cosmological Phase Transitions	476
14.9.2	Inflation	479
14.9.3	Density Perturbations Generated during Inflation	486
14.10	Dark Energy and Dark Matter	493
15	*An Introduction to String Theory	499
15.1	The Relativistic Point Particle	501
15.2	The Free Classical String	505
15.2.1	The String Action	505
15.2.2	Weyl Invariance and Gauge Fixing	509
15.2.3	The Euclidean Worldsheet and Conformal Invariance	511
15.2.4	Mode Expansions	515
15.2.5	A Useful Transformation	520
15.3	Quantization of the Free Bosonic String	522
15.3.1	The Quantum Virasoro Algebra	523
15.3.2	Quantum Gauge Fixing	529
15.3.3	The Critical Spacetime Dimension	533
15.3.4	The Ghost Hilbert Space	537
15.3.5	The BRST Cohomology	539
15.4	Physics of the Free Bosonic String	544
15.4.1	The Mass Spectrum	544
15.4.2	Vertex Operators	549
15.4.3	Strings and Quantum Gravity	552
15.5	Further Developments	555
15.5.1	String Interactions	555
15.5.2	Superstrings	559
15.5.3	The Ramifications of Compactification	561
15.5.4	Large Extra Dimensions	568
16	*Gravity and Quantum Mechanics	575
16.1	Canonical Quantization of General Relativity	575
16.1.1	Hamiltonian Formulation of General Relativity	576
16.1.2	New Variables: Triads, Holonomies and Fluxes	586
16.1.3	Towards a Quantum Theory of Gravity	596
16.2	Quantum Cosmology	608
16.2.1	The Problem of Time	609
16.2.2	Loop Quantum Cosmology	614
16.3	Black-Hole Entropy	617

Some Snapshots of the Tour	623
A Some Mathematical Notes	641
A.1 Delta Functions and Functional Differentiation	641
A.2 The Levi-Civita Tensor Density	643
A.3 Vector Spaces and Hilbert Spaces	644
A.4 Gauss' Theorem	646
A.5 Surface Area and Volume of a d -Dimensional Sphere	647
A.6 Gaussian Integrals	648
A.7 Grassmann Variables	649
B Some Elements of Group Theory	651
C Natural Units	665
D Scattering Cross Sections and Particle Decay Rates	669
Bibliography	673
References	677
Index	685
