CODES AND STANDARDS

ASME CODE SECTIONS XI ACTIVITIES

Introduction .................................................................................................................. 1

PVP2012-78187 ............................................................................................................. 3
Closed Form Solutions for Stress Intensity Factor Coefficients for Circumferential ID Surface
Flaws in Cylinders in ASME Section XI Appendix A
   Russell C. Cipolla and Darrell R. Lee

PVP2012-78190 .......................................................................................................... 17
Alternative Acceptance Criteria for Flaws Ferritic Steel Components Operating in the
Upper Shelf Temperature Range
   H. L. Gustin, R. C. Cipolla, S. X. Xu, and D. A. Scarth

PVP2012-78227 .......................................................................................................... 35
Understanding Equivalent Margins Analysis for Required Upper Shelf Energy
   Michael Benson, Gary L. Stevens, Mark Kirk, Russell Cipolla, and Douglas Scarth

PVP2012-78236 .......................................................................................................... 45
Calculation of Stress Intensity Factor for Surface Flaws Using Universal Weight Functions
With Piece-Wise Cubic Stress Interpolation
   Steven X. Xu, Douglas A. Scarth, and Russell C. Cipolla

PVP2012-78265 .......................................................................................................... 59
Technical Basis for Case N-766-1 Nickel Alloy Reactor Coolant Inlay and Onlay for
Mitigation of PWR Full Penetration Circumferential Nickel Alloy Welds in Class 1 Items
   S. E. Marlette, J. G. Weicks, W. Bamford, N. L. Glunt, A. Udyawar, and C. K. Ng

PVP2012-78719 .......................................................................................................... 67
Weight Function Method With Segment-Wise Polynomial Interpolation to Calculate
Stress Intensity Factors for Complicated Stress Distributions
   Yinsheng Li, Hiroto Itoh, Kunio Hasegawa, Steven X. Xu, and Douglas A. Scarth

COMBINATION OF MULTIPLE LOADS IN DESIGN AND
FITNESS-FOR-SERVICE

Introduction .................................................................................................................. 81

PVP2012-78069 .......................................................................................................... 83
Experimental Investigation of Failure Estimation Method for Cylinders With a
Circumferential Crack Subjected to Combined Tensile and Torsion Loads
   Yinsheng Li, Kunio Hasegawa, Naoki Miura, and Katsuaki Hoshino
Analysis of 4” Schedule 160 Pipe With a Wall Thinning Subject to Torsion, Bending and Pressure Loads
Bostjan Bezensek

Effects of Bending Moment and Torsion on the Burst Pressure of Locally Thinned Pipes
Phuong H. Hoang, Kunio Hasegawa, Bostjan Bezensek, and Yinsheng Li

Experimental Investigation on Net-Section-Collapse Criterion for Circumferentially Cracked Cylinders Subjected to Torsional Moment
Naoki Miura, Katsuaki Hoshino, Yinsheng Li, and Kunio Hasegawa

Estimation of Low-Cycle Fatigue Life of Elbow Pipes Considering the Multi-Axial Stress Effect
Koji Takahashi, Kazuya Matsuo, Kotoji Ando, and Yoshio Urabe

Effect of Torsion on Collapse Bending Moment for 24-Inch Diameter Schedule 80 Pipes With Wall Thinning
Kunio Hasegawa, Yinsheng Li, Bostjan Bezensek, and Phuong Hoang

ENVIRONMENTAL FATIGUE ISSUES

Introduction

Comparison of Strain Rate Calculation Methods for Environmental Fatigue Correction Evaluation
Seiji Asada

Environmentally Assisted Fatigue Assessment Considering an Alternative Method to the ASME Code Case N-792
Stéphan Courtin, André Lefrançois, Jean-Alain Le Duff, and Anne Le Pêcher

Fatigue Life of the Strain Hardened Austenitic Stainless Steel in Simulated PWR Primary Water
Kazuya Tsutsumi, Nicolas Huin, Thierry Couvant, Gilbert Henaff, Jose Mendez, and Denis Chollet

Fatigue Crack Initiation of 304L Stainless Steel in Simulated PWR Primary Environment: Relative Effect of Strain Rate
Nicolas Huin, Kazuya Tsutsumi, Laurent Legras, Thierry Couvant, Dominique Loisnard, Gilbert Henaff, and Jose Mendez

INTEGRITY OF CAST STAINLESS PIPE (INSPECTION AND EVALUATION)

Introduction ........................................................................................................... 303

PVP2012-78051 ........................................................................................................ 305
Research on Ultrasonic Inspection of Cast Austenitic Stainless Steel Piping
Kazunobu Sakamoto, Takashi Furukawa, Ichiro Komura, Yoshinori Kamiyama, and
Tsuyoshi Mihara

PVP2012-78477 ........................................................................................................ 313
New Flaws for Qualification of Cast Stainless Steel Inspection
ikka Virkkunen, Doug Kull, and Mika Kemppainen

PVP2012-78687 ........................................................................................................ 319
Elastic-Plastic Fracture Mechanics Analysis of Cast Stainless Steel Pipes (Comparison of
Z-Factor, Two-Parameter and J-T Methods)
Masayuki Kamaya and Kiminobu Hojo

PVP2012-78710 ........................................................................................................ 327
Probabilistic Models of Reliability of Cast Austenitic Stainless Steel Piping
Haiyang Qian, David Harris, and Timothy J. Griesbach
RATCHETING AND FATIGUE ISSUES IN PRESSURE VESSEL AND PIPING DESIGN

Introduction ................................................................. 403

PVP2012-78485 ............................................................... 405
Shakedown and Ratcheting Assessment of a Tubeplate Using the Linear Matching Method
H. Reece-Barkell, M. Stevens, D. J. Tipping, and J. Sole

PVP2012-78513 ............................................................... 413
Relief Valve Stress and Fatigue Study Using Non-Linear Analysis
David Griffin, John Kelly, Gareth Bowie, David Hunt, Andrew Fletcher, Gary Reed, and
Peter Hugill

PVP2012-78516 ............................................................... 423
Ratchet Boundary Evaluation and Comparison With Ratcheting Experiments Involving
Strain Hardening Material Models
H. Indermohan and W. Reinhardt

PVP2012-78660 ............................................................... 433
Shakedown at Thermal Discontinuities Involving Thermal Membrane and Thermal
Bending Stress
Ali Asadkarami and Wolf Reinhardt

RECENT DEVELOPMENTS IN ASME CODES AND STANDARDS

Introduction ................................................................. 441

PVP2012-78072 ............................................................... 443
High Purity Process Piping: Addition of Chapter X High Purity Piping to the
ASME B31.3 Process Piping Code
Barbara K. Henon and Dennis Cobb

PVP2012-78075 ............................................................... 451
Design of Unpartitioned, Plug Type Header Boxes for Air-Cooled Heat Exchangers in
Refinery Service
Hugh-Jean Nel, Alan Nurick, André Leon Nel, and Francois Lombaard

PVP2012-78130 ............................................................... 461
A Review and Remediation of a Code Non-Compliance Incident: Lessons Learned
John J. Aumuller, Zihui Xia, and Vincent A. Carucci

PVP2012-78571 ............................................................... 469
Alternative Approach for Qualification of Temperbead Welding in the Nuclear Industry
Steven L. McCracken and Richard E. Smith
# Recent Developments in Chinese Codes and Standards

## Introduction 479

</table>
Development of Stress Intensity Factors for Deep Surface Cracks in Plates and Cylinders

Yinsheng Li, Hiroto Itoh, Kunio Hasegawa, Kazuya Osakabe, and Hiroshi Okada

Development of RBM Standard for Pressurized Equipments in Japan

Shinsuke Sakai, Toshikazu Shibasaki, Hiroaki Masatomo, Hiroshi Ishimaru, and Kazuyoshi Sekine

Development of Ultra Large Scale Computation for Transient Welding Deformation and Stress Using Idealized Explicit FEM Accelerated by GPU

Kazuki Ikushima, Shinsuke Itoh, and Masakazu Shibahara

Prediction of Residual Stress in Multi-Pass Welded Joint Using Idealized Explicit FEM

Masakazu Shibahara, Shinsuke Itoh, Takashi Okada, Kazuki Ikushima, and Satoru Nishikawa

Comparison of Heat Input Methods in Welding Residual Stress Analysis

David J. Dewees

Computations of Stress Intensity Factors for Deep Cracks in Plates by Using the Tetrahedral Finite Element

Hiroshi Okada, Hirohito Koya, Hiroshi Kawai, and Yinsheng Li

Probabilistic Structural Integrity Analysis of Reactor Pressure Vessels During PTS Events

Kunio Onizawa, Koichi Masaki, and Jinya Katsuyama

REPAIR, REPLACEMENT AND MITIGATION FOR FITNESS-FOR-SERVICE RULES

Introduction

Underwater Remote Microscopic Observation Technique for 3D Curved Surface of LWR Structures

Satoru Aoike, Koichi Kurosawa, Shinya Ohmori, and Masaaki Tanaka

Reliability of Water Jet Peening for Alloy 600 PWSCC Mitigation

Koji Okamura, Noriaki Sugimoto, and Harutaka Suzuki

Application of Water Jet Peening on Pre-Cracked Nickel Based Alloy and Stainless Steel

Ren Morinaka, Kunihiko Hasegawa, Noboru Saito, Fujio Yoshikubo, and Akihiro Kanno
SECTION III CODES AND STANDARDS ACTIVITIES FOR ELEVATED TEMPERATURE SERVICE

Introduction .................................................................................................................................................. 727

PVP2012-78062 ........................................................................................................................................... 729
Section III, Division 5: Development and Future Directions

PVP2012-78081 ........................................................................................................................................... 739
Elevated Temperature Primary Load Design Method Using Pseudo Elastic-Perfectly Plastic Model
Peter Carter, T.-L. (Sam) Sham, and R. I. Jetter

PVP2012-78082 ........................................................................................................................................... 749
Application of Elastic-Perfectly Plastic Cyclic Analysis to Assessment of Creep Strain
Peter Carter, Robert I. Jetter, and T.-L. (Sam) Sham

PVP2012-78083 ........................................................................................................................................... 761
Application of Shakedown Analysis to Evaluation of Creep-Fatigue Limits
Peter Carter, R. I. Jetter, and T.-L. (Sam) Sham

STRUCTURAL INTEGRITY OF PRESSURE COMPONENTS

Introduction .................................................................................................................................................. 771

PVP2012-78021 ........................................................................................................................................... 773
Development of Load Multipliers (Z-Factors) in Elastic-Plastic Fracture Mechanics Evaluation in Rules on Fitness-for-Service for Nuclear Power Plants
Seiji Asada, Masao Itatani, Naoki Miura, and Hideo Machida

PVP2012-78658 ........................................................................................................................................... 783
Considerations of the Restraint Introduced by Piping Support Friction in a Comprehensive ASME B31.3 Analysis
Bikramjit Singh Antaal, Yogeshwar Hari, and Dennis K. Williams

PVP2012-78692 ........................................................................................................................................... 791
ASME Piping Code-Based Stress Analysis Procedure and a Comparison With the Italian Code
Ottaviano Grisolia

PVP2012-78734 ........................................................................................................................................... 799
A Fracture Mechanics Evaluation of BWR Vessel Water Level Instrumentation Nozzle P-T Curve Assessment Including Impact of Irradiation Effects
Hardayal S. Mehta, Lori J. Tilly, and Donald A. Sampson
USE OF MODERN FE METHODS FOR CODE ASSESSMENT

Introduction .................................................................................................................. 805

PVP2012-78040 ........................................................................................................... 807
Application of Limit Load Analysis to Complex Structures
  Adam Towse, Michael Martin, Paul Hurrell, Rob Philipson, Adrian Allen, and
  Chris Andrews

PVP2012-78042 ......................................................................................................... 813
Detailed Fatigue Checks Based on a Local Monitoring Concept
  Juergen Rudolph, Steffen Bergholz, and Roland Hilpert

PVP2012-78065 ......................................................................................................... 823
A Direct Method on the Evaluation of Cyclic Behaviour With Creep Effect
  Haofeng Chen, Weihang Chen, and James Ure

PVP2012-78171 ......................................................................................................... 833
Application of Gurson Model to Ni-Based Alloy Weld Joint Pipe With an Axial or a
  Circumferential Surface Flaw
  Kiminobu Hojo and Naoki Ogawa

PVP2012-78296 ......................................................................................................... 841
Strain-Based Fatigue Methods Using Modern Finite Element Analysis for the Assessment
  of Pressure Vessels Equivalent to the ASME III Code
  Lindsay Rawson and David Rice

PVP2012-78359 ......................................................................................................... 851
Elastic-Plastic Fatigue Evaluation of a Heavy Wall Nozzle Subject to Rapid
  Thermal Transients
  David J. Dewees and S. Michael Cooch

PVP2012-78542 ......................................................................................................... 861
Investigation of Transient Thermal Analysis Computational Efficiency Improvements via
  Frequency Domain Methods
  Gregory A. Banyay, John C. Brigham, and Evgenii Rudnyi

Author Index ............................................................................................................... 871
