Proceedings of the

ASME Pressure Vessels and Piping Conference – 2012 –

VOLUME 2

Computer Technology and Bolted Joints

presented at
ASME 2012 Pressure Vessels and Piping Conference
July 15-19, 2012
Toronto, Ontario, Canada

sponsored by
Pressure Vessels and Piping Division, ASME

ASME
Three Park Avenue * New York, N.Y. 10016
DESIGN AND ANALYSIS OF PRESSURE SEALED JOINTS
Introduction.................................................................................................................. 155

PVP2012-78166.............................................................................................................. 157
Alternative Tracing Gas Mixtures for Valve Fugitive Emission Measurements
Hubert Lejeune and Laurent Cougnon

PVP2012-78215.............................................................................................................. 167
Evaluation of Stuffing Box Forces Associated With the Thermal Expansion of e-PTFE and
Graphite Packing Sets
Carlos D. Girão and Keith Guenther

PVP2012-78499.............................................................................................................. 175
Numerical Analysis of Bolted Trunnion Systems of Packages for Radioactive Materials
Jens Sterthaus, Viktor Ballheimer, Christian Kuschke, and Frank Wille

ELEVATED TEMPERATURE BEHAVIOR OF BOLTED JOINTS
Introduction.................................................................................................................. 181

PVP2012-78054.............................................................................................................. 183
Bolt Preload Reduction of Pipe Flange Connections After Plant Shutdown
Toshimichi Fukuoka, Masataka Nomura, Yuutarou Uemori, and Koji Sato

PVP2012-78184.............................................................................................................. 193
Practical Evaluation of PTFE Thermal Behavior Using the Hot Blowout Thermal Cycling Test
Anita R. Bausman and A. Fitzgerald Waterland, Ill

PVP2012-78349.............................................................................................................. 199
Serrated Metal Graphite Faced Gaskets for Ring Joint Flanges
José C. Veiga, Carlos F. Cipolatti, Nelson Kavanagh, Fabio Castro, and Valtemir Zandoná

PVP2012-78395.............................................................................................................. 205
Visco Elastic FEM Stress Analysis of Bolted Flange Connections With PTFE-Blended Gaskets
Under Elevated Temperature
Koji Sato, Shinya Kurokawa, and Toshiyuki Sawa

LEAK TIGHTNESS AND FUGITIVE EMISSIONS
Introduction.................................................................................................................. 213

PVP2012-78147.............................................................................................................. 215
Prediction of Leak Rates Through Porous Gasket at High Temperature
Lotfi Grine and Abdel-Hakim Bouzid

PVP2012-78291.............................................................................................................. 223
Investigation on Detection of COV Based on Infrared Camera
Benjamin Thomas, Emmanuel Sauger, Sébastien Fily, and Hubert Lejeune
Probabilistic Estimation of Flow-Accelerated Corrosion Rate at the Welded Joints of the Nuclear Piping System

Dongliang Lu, M. D. Pandey, and M. I. Jyrkama

THREADED FASTENERS

Introduction

Deformation and Slippage Modeling for Investigating Bolt Loosening Under Harmonic Transverse Excitation

Xianjie Yang and Sayed A. Nassar

A Loosening Mechanism of Bolted Joints Under Repeated Transverse Displacements

Toshiyuki Sawa, Mitsutoshi Ishimura, and Takanori Nagao

Finite Element Simulation of Process Control of Bolt Tightening for Joints With Non-Parallel Contact

Saravanan Ganeshmurthy and Sayed A. Nassar

Non-Loosening Performance of Plastically Pre-Deformed Nuts Under Cyclic Loads

Yasumasa Shoji, Susumu Kumakura, and Toshiyuki Sawa
