PART B

INTEGRITY ISSUES IN SCC AND CORROSION FATIGUE

Introduction ........................................................................................................... 695

PVP2012-78043 .......................................................... 697
Electrochemical Properties of 304 Stainless Steel Under Proportional and Non-Proportional
Multiaxial Loading Condition
Yuhui Huang, Fu-Zhen Xuan, Takamoto Itoh, and Shan-Tung Tu

PVP2012-78471 .......................................................... 703
Estimation of SCC Crack Growth Behavior Under Weld Residual Stress in the Bottom of a
Reactor Pressure Vessel by Finite Element Analysis
Fuminori Iwamatsu, Katsumasa Miyazaki, and Masahito Mochizuki

LEAK-BEFORE-BREAK

Introduction ........................................................................................................... 711

PVP2012-78061 .......................................................... 713
Effect of Rotational Stiffness Evolution at Crack Part on Critical Crack Size in SFR
Takashi Wakai, Hideo Machida, and Shinji Yoshida

PVP2012-78170 .......................................................... 723
Benchmarking xLPR Version 1.0 With the PRO-LOCA Version 3.0 Code
Robert Kurth, Elizabeth Kurth, Bruce Young, Andrew Cox, Rick Olson, Paul Scott,
David Rudland, Raj Iyengar, and Craig Harrington

PVP2012-78181 .......................................................... 731
Advances in COD Equations — Circumferential Through-Wall Cracks
Bruce A. Young, Rick J. Olson, and Matthew Kerr

PVP2012-78186 .......................................................... 743
Initial Development of the Extremely Low Probability of Rupture (xLPR) Version 2.0 Code
D. Rudland and C. Harrington

PVP2012-78279 .......................................................... 753
Influence of Nozzle Transition on Leak Before Break Parameters
Peter Baas and Frederic Blom

PVP2012-78303 .......................................................... 763
STYLE: Comparison of Leak-Before-Break Methodologies Applied in Europe
John Sharples
Finite Element Analysis of Burst Pressure for Pipelines With Long Corrosion Defects
Xian-Kui Zhu and Brian N. Leis

Investigation on the Allowable Temperature During Electrofusion Welding of Polyethylene Pipe
Sijia Zhong, Jianfeng Shi, Weican Guo, and Jinyang Zheng

Bending Fatigue Testing of Pipe and Piping Components Fabricated From High Density Polyethylene Materials
Timothy M. Adams, Douglas Munson, Siegrid Hall, and Jeffrey W. Andrasik

A Basis for Selecting the Most Appropriate Small Specimen Creep Test Type
T. H. Hyde, C. J. Hyde, and W. Sun

Determination of Actual Tensile and Fracture Characteristics of Critical Components of Industrial Plants Under Long Term Operation by SPT
Karel Matocha

Industrial Application of Small Punch Testing for In-Service Component Condition Assessment: An Overview
Bilal Dogan and Thomas Hyde

Development of a Wall Thinning Rate Model for Liquid Droplet Impingement Erosion
Ryo Morita and Yuta Uchiyama

Application of an IR Thermography Technique to the Inspection of Local Wall-Thinning Defects in Nuclear Piping Components
Jin-Weon Kim, Kyung-Won Yun, and Hyun-Chul Jung
WELDING RESIDUAL STRESS AND DISTORTION SIMULATION AND MEASUREMENT
Introduction ........................................................................................................... 1031

PVP2012-78032 ...................................................................................................... 1033
Prediction of Weld Residual Stress in a PWR Pressurizer Surge Nozzle: A Proposed Fast
Computational 3D Analysis Method and Influence of Its Heat Source Model
Akira Maekawa, Atsushi Kawahara, Hisashi Serizawa, and Hidekazu Murakawa

PVP2012-78055 ...................................................................................................... 1045
A Study of the Effect of Hardening Model in the Prediction of Welding Residual Stress
Martina M. Joosten and Martin S. Gallegillo

PVP2012-78071 ...................................................................................................... 1055
Numerical Simulation of Mecano-Welding Process for Cylinder Manufacturing
Zhengkun Feng and Henri Champliaud

PVP2012-78073 ...................................................................................................... 1061
Predicting Post-Weld Residual Stresses in Ferritic Steel Weldments
Cory J. Hamelin, Ondrej Muránsky, Philip J. Bendeich, and Lyndon Edwards

PVP2012-78089 ...................................................................................................... 1071
Residual Stress Predictions on a 29" Narrow Gap Dissimilar Metal Weld and Comparison
With a 14" Configuration
Stéphan Courtin, Xavier Ficquet, Thi Thuy Trang Lê, Philippe Gilles, and Miguel Yescas

PVP2012-78143 ...................................................................................................... 1079
Simulation and Measurement of Residual Stresses in a Stainless Steel Ring Welded
Circular Disc
Gang Zheng, Sayeed Hossain, Mike Smith, and David Smith

PVP2012-78156 ...................................................................................................... 1089
Mitigation of Distortion in an Edge-Welded Bar by Optimization Control of the Welding
Current and Speed Profile During Welding
Mahyar Asadi, John A. Goldak, and Christopher Bayley

PVP2012-78180 ...................................................................................................... 1099
Effect of Weld Residual Stress Fitting on Stress Intensity Factor for Circumferential Surface
Cracks in Pipe
Do-Jun Shim, Matthew Kerr, and Steven Xu

PVP2012-78299 ...................................................................................................... 1107
Development of Material Model Parameters Suitable for the Finite Element Simulation of
Ferritic Welds
Steve Bate, Neil Shallcross, Karen Stone, Alison Mark, John Francis, and Chris Gill

PVP2012-78364 ...................................................................................................... 1115
Numerical Simulation of Residual Stresses Induced in Compact Tension Specimens Using
Electron Beam Welding
P. Kapadia, C. M. Davies, D. W. Dean, and K. M. Nikbin

xxi
Optimised Modelling of Weld Metal Constitutive Behaviour in the Net TG4 International Weld Simulation and Measurement Benchmark
  Mike C. Smith, Ondrej Muránsky, Colin Austin, Philip J. Bendeich, and Lyndon Edwards

The Impact of Axi-Symmetric Boundary Conditions on Predicted Residual Stress and Shrinkage in a PWR Nozzle Dissimilar Metal Weld
  Philip J. Bendeich, Ondrej Muránsky, Cory J. Hamelin, Mike C. Smith, and Lyndon Edwards

Prediction and Measurement of Weld Residual Stresses in Thermally Aged Girth-Welded Austenitic Steel Pipes
  Ondrej Muránsky, Mike C. Smith, Philip J. Bendeich, Cory J. Hamelin, and Lyndon Edwards

Effects of Simulation Parameters on Residual Stresses of Inconel Alloy 600 in Finite Element Laser Shock Peening Analysis
  Ju Hee Kim, Ji Soo Kim, Yun Jae Kim, Hong Yeol Bae, and Joung Soo Kim

Prediction of Residual Stress Distribution for RPV CRDM Penetration Nozzles
  Hong-Yeol Bae, Yun-Jae Kim, Ju-Hee Kim, Sung-Ho Lee, and Kyoung-Soo Lee

Finite Element Modelling of Reduced Pressure Electron Beam Stainless Steel Plate and Pipe Welds
  Benjamin M. E. Peliereau, Paul R. Hurrell, Christopher M. Gill, and Kevin Ayres

Effect of Ageing on Residual Stresses in Welded Stainless Steel Cylinders
  Son Do, David Smith, and Mike Smith

Residual Stress Measurement of a Ferritic Bead on Plate Benchmark Test Specimen Using the Contour Method
  Foroogh Hosseinzadeh and P. John Bouchard

Welding Residual Stress in a Large Diameter Nuclear Reactor Pressure Vessel Nozzle
  Tao Zhang, Frederick W. Brust, Gery Wilkowski, Haqin Xu, Alfredo A. Betervide, and Oscar Mazzantini

Welding Simulation: Relationship Between Welding Geometry and Determination of Hardening Model
  Jonathan Mullins and Jens Gunnars
High-Temperature Constitutive Behavior of Austenitic Stainless Steel for Weld Residual Stress Modeling
Dongxiao Qiao, Wei Zhang, and Zhili Feng

Effectiveness of Excavate and Weld Repairs on a Large Diameter Piping Dissimilar Metal Weld by Finite Element Analysis
Francis H. Ku, Pete C. Riccardella, Aparna Alleshwaram, and Eric Willis

A Sensitivity Analysis of NRC Welding Residual Stress Validation Program International Round Robin Program
John A. Goldak, Stanislav Tchernov, Jianguo Zhou, and Daniel Downey

Magnitude and Distribution of Retained Residual Stresses in Laboratory Fracture Mechanics Specimens Extracted From Welded Components
R. G. Hurlston, J. K. Sharples, and A. H. Sherry

FE Residual Stress Analysis in a Narrow Gap Dissimilar Metal Weld
Florian Obermeier, Stéphan Courtin, Tomas Nicak, and Elisabeth Keim

Investigative Study of 2-D vs. 3-D Weld Residual Stress Analyses of the NRC Phase II Mockup
Francis H. Ku and Shu (Stan) S. Tang

Improvement of Residual Stress Determination by Deep Hole Drilling Considering Plastic Deformation
Masahito Mochizuki, Houichi Kitano, and Shigetaka Okano

Effect of Partial Welding on Residual Stress and Structural Integrity in Piping Welds
Jinya Katsuyama, Koichi Masaki, and Kunio Onizawa

Summary of Finite Element (FE) Sensitivity Studies Conducted in Support of the NRC/EPRI Welding Residual Stress (WRS) Program
Matthew Kerr and Howard J. Rathbun
