Volume 2

Comparative Study of the Fouling Characteristics of Ceramic and Polymeric Microfiltration and Ultrafiltration Membranes Treating Surface Waters

Seung-Jin Lee, Mehmet Dilaver, Pyung-Kyu Park, Jae-Hong Kim, Dodd Way

The Performance of Anti-Scaling on Silica-Scaling in Reverse Osmosis Plants

Wolfgang Hater, Gerd Braun

Challenges and Rewards of Design and Construction of a 2 MGD Brackish Water RO Plant in Maryland

Ben Movahed

Pilot Testing of the Lower Hudson River for Potable Water Production

Kenneth Klinko, Kurt Kiefer, Kenneth P. Smith, Mark White, Sameet Master

Adapting to the Whims of Nature: Post-Construction Automation of MF/RO Systems within a Large Advanced Water Reuse Plant for Intermittent Operation

James C. Lozier, Kenneth Moore, Amarnath Reddy, Larry Schimmoller

Microbiological Control in Thin Film Composite Membrane Systems Using a High Purity Chlorine Dioxide Solution

John Zupanovich, David Bishop, Andrew Dook, Michael Duff

Wastewater Treatment with MBR & RO for Pulp & Paper Mills

Vetrivel Dhagumudi, Dongxu Yan

Applying Green Chemistry to Resolve Membrane Backwash Recycle Stream Interferences with Conventional Coagulation Processes and the Replacement of Traditional Membrane Cleaning Solutions

Steven J. Duranceau, Christopher C. Boyd

Secondary Membranes for Backwash Recovery: Establishing Design Criteria, Demonstrating Performance Expectations, and Implementation

Karla Kinser, William Simms, Mark Graham, Stephanie Sansom, Quinn Crosina
Impact of Operational Strategies to Prevent Silica Fouling in Reducing Costs in BWRO Systems:
Case Study for Arica 18,000 M3/Day BWRO Plant in Chile ........................................... 751
Silvia Gallego, Fernando Del Vigo, Stephen. P. Chesters, Matthew. W. Armstrong, David Valdivia, Antonio
Ordóñez

New Cheap Ceramic Membranes for Ultra Filtration ......................................................... 761
Dae-Yeong Jeong, Min-Woo Kim, Nguyen Nat Truong, Doohun Kim, Jong Uk Kim

Comparison of Fouling Potential and Cleaning Efficiency of Ceramic and Polymeric Membranes for
Water Treatment Applications ......................................................................................... 766
Katie Guerra, John Pellegrino

Coagulation by Novel High-Basecity Poly-Aluminum Chloride Effectively Reduces Ceramic
Membrane Fouling and Residual Aluminum ............................................................... 774
Masaaki Kimura, Yoshihiko Matsui, Taku Matsushita, Nobutaka Shitani, Tairyu B. Ishikawa

Strategic Practices and Lessons Learned for Integrating Desalinated Seawater into Existing Systems .... 778
Brent Alspach, Warren Teitz, Robert Harding, Edward Means

Commissioning of Two Large Seawater UF Pre-Treatment Systems: Comparing Pressure and
Submerged ...................................................................................................................... 787
Stratton G. Tragellis, Sam J. Towndrow, Krishnan Sadasivam

Development of a Diagnosis Technique for Assessing Performances of Seawater Reverse Osmosis
Membrane Plants ......................................................................................................... 802
Seung-Min Park, Jihee Han, Sangho Lee, June-Seok Choi, Won-Tae Lee

Air Sparging on Hollow Fiber Membranes in a Bubble Column Reactor ............................... 817
Lijun Xia, Adrian Wing-Keung Law, Cong Ma, Anthony G. Fane

Irvine Ranch Water District's Successful Implementation of a 10 MDG Membrane Bioreactor for
Water Recycling Title ................................................................................................. 823
Steven L. Mallory, Gregorio Estrada, Scott Toland, Mandira Sudame

Integrated Membrane System to Meet TOC Discharge Limits in Massachusetts .................... 835
Michael Sparks, Peter Annumtato

Evaluating the Economics of a Unique Hybrid Ro Design After Three Years of Treating Brackish
Groundwater ................................................................................................................. 843
Rich N. Franks, Craig R. Bartels, Val S. Frenkel, David Birch

Arsenic (As³⁺) Removal by Standard and High-Rejection Ro Membranes and Oxidation to as⁵⁺ Prior
to RO .......................................................................................................................... 856
Anthony Tarquin, John Balliew, Ralph Padilla

Innovative use of Gas Permeable Hydrophobic Membranes to Remove VOCs, MTBE/ETBE, Radon,
THMS from Drinking Water ......................................................................................... 867
Robert F. Raczko, John E. Dyksen, Christopher J. Savino

Choosing a Reverse Osmosis Membrane for Indirect Potable Reuse .................................... 895
Eric H. Smith, Greg D. Wetterau, Tom Richardson

RE-Visiting Membrane Filtration 10 Years Later, Weighing Long Term Operating Track Record Vs.
the Lure of The Newest High Performer? .................................................................... 899
Jesus Garcia-Aleman, Jim Laster

All's Well That Ends Well: Getting the Most Out of a Membrane Retrofit ......................... 902
Sarah C. Clark

Challenges of Planning and Integrating Florida's First LT2-Compliant Membrane Filtration Facility
into an Existing Surface Water Treatment System ..................................................... 910
Joseph R. Elarde, Justin Martin, Bruce Weinstein, James Laster

Better Economics of Desalination Through Hybrid Seawater – Brackish RO Desalination Systems ................................. 922
Howard Arnold, Jill Hudkins

Limits of Energy Savings in SWRO ................................................................................. 930
Wayne Bates, Craig R. Bartels, Rich Franks

Investigation of a Deep Infiltration Gallery Intake for a Large Seawater Desalination Project .... 946
Makrom H. Shatila, Cesar Lopez, Dennis E. Williams, Paul L. Findley

An Evaluation of MBR Technology to Meet Stringent Phosphorous Limits ........................ 960
Christopher B. Milligan

Startup of a State of the Art Nutrient Removal MBR Facility Under Stringent Operating Guarantees ............ 990
John Braby, Jim Chitty, Ray Williams, Kelly Comstock, Pete Schuler, Rod Pope, Paul Williams, Kun Sovanupracha

Optimization of an Industrial Wastewater Treatment Plant Through Implementation of a Membrane
Bioreactor and Reverse Osmosis System for Reuse .................................................. 1001
Naomi Jones, Ben Freeman

Synergistic Use of Ion Exchange and RO Technologies in Multicontaminant Removal Applications in
Drinking Water .............................................................................................................. 1016
Francis Boodoo
A New Approach to Estimate Norovirus Removal Performance in a Membrane Filtration Process by Using Virus-Like Particles and Immuno-PCR Method
Nobutaka Shirasaki, Taku Matsushita, Yuichi Tatsuki, Yoshihiko Matsui
Disinfection Capabilities of Membranes as Tertiary Filters
Douglas D. Drury, Leonia Risso
New Chlorine Resistant Polyamide Reverse Osmosis Membrane
Yuliana Porras Mendez, Andrew Murphy, Chuck Moody, Shui Wei Lin, Xerong Kim, Robert L. Riley
Solar Membrane Distillation
Andrea F. Corral, Vasiliki Karanikola, Patrick Mette, Cassandra Messina, Hua Jiang, Chad Munich, Bryan Moravec, Andrew Shrodes, Robert G. Arnold, Wendell P. Ela
Innovative and Developmental Desalination Technologies. Where are we Now?
Ujuk G. Erdal, Robert Huehmer, Jim Lozier, Robert Bergman
Pilot Scale Evaluation of Three-Stage Nanofiltration for Treatment of A Hard, Highly-Colored Groundwater
David E. Macnevin, Rafael A. Terrero, Richard A. Coates, Brandon C. Yallaly, Robert A. Bergman
High Iron & Silica Challenges in a 2,000 Hour NF Pilot Study
David H. Paul
Surface Water Nanofiltration: Comparison of Membrane Pre-Treatment and Conventional Pre-Treatment
Cyril Marconnet, Anne Lang
Effects of Chemical Cleaning on Membrane Operating Lifetime
Syed Z. Abdullah, Pierre R. Berube
Influence of Transparent Expolymer Particles (TEP) Fouling on UF Ceramic Membranes and Associated Flux Recovery after Membrane Cleaning
Juma Z. Hamad, Changyoun Ha, Catalina Jovich, Anthony T. Ku, Maria D. Kennedy, Gary L. Amy
Membrane Characterization by Microscopic and Optical Methods: Powerful Tool to Control Fouling
Isabelle Baudin, Rahma Tamade, Yvan Wyart, Laure Siozade, Karl Glucina, Carole Deumie, Philippe Moulin
Piloting Membrane Replacements to Improve RO Optimization, Reduce Chemical Use and Reduce Energy Consumption
Lance R. Littrell, Christophe M. Robert, Brad Macek, Pierre Vignier
Combining Operational and Equipment Improvements to an Electrodialysis Membrane System
Kerry J. Brough, Patrick Girvin, Bruce E. Valley, John Barber, Joseph Aldridge
Never a Dull Moment: Meeting Challenges Through Optimization at a West Texas Membrane Water Treatment Plant
James R. Dewolfe, Mike Urrutia, Sunil Kommineni
A Sequential Batch Reactor – Forward Osmosis System for Water Reuse
Zhenyu Li, Victor Yangali-Quintanilla, Qingyu Li, Rodrigo Villalobos, Gary Amy
Full-Scale Simulation of Desalination Processes Using Forward Osmosis System Coupled with Reverse Osmosis
Suhan Kim
Fouling and Cleaning of Forward Osmosis (FO) Membranes Recycling a Treated Wastewater
Victor Villalobos Linares, Victor Yangali-Quintanilla, Zhenyu Li, Qingyu Li, Gary Amy
Demonstrating Concentrate Minimization Technologies for Inland Reclaimed Water Desalination
Charlie He, Guy Carpenier, Erich Lais, Brandy Kelso
Selection Criteria for High Recovery Membrane-Based Technology Solutions to Address Water Reuse and Concentrate Disposal
Brad Biagini, Bernie Mack, Malynda Cappelle, Thomas A. Davis
Removing Radium with RO and its Effects on Concentrate Disposal Pipeline Material
Justin Sutherland, Graham Juby, Lance Rothe, William Caupoy, Duane Bryant, Kevin Morrison
The IFAS-MBR Process: A Compact Combination of Biofilm and MBR Technology for Reuse
Jorge Juan Malfeito, Teresa De La Torre, Carlos Rodriguez, Miguel Angel Gomez, Esteban Alonso
Retrofitting Singapore’s Jurong Water Reclamation Plant with Membrane Bioreactor – Minimizing Energy Consumption Through Selection of Unique Design Parameters
Ben Freeman, Shinwa Sunano, Yasuo Ozaki
MBR/RO Produces Reuse Water for a Food Processing Facility and to Cool the Facility Lowering Overall Electrical Usage
Brian S. Fraser, Tooru Morita
Author Index
