13th ASCE Aerospace Division Conference on Engineering, Construction, and Operations in Challenging Environments and 5th NASA/ASCE Workshop on Granular Materials in Space Exploration

(EARTH AND SPACE 2012)

Pasadena, California, USA
15-18 April 2012

Volume 2 of 2

Editors:

Kris Zacny
Ramesh B. Malla
Wieslaw Binienda

Interface Stress Redistribution in FRP-Strengthened Reinforced Concrete Beams Using a Three-Parameter Viscoelastic Foundation Model
Chao Zhang, Jialai Wang

SYMPOSIUM 4: HYDRAULIC AND EARTH STRUCTURES

A New Constitutive Model for Rick Joint and Its Numerical Implementation .................................................. 782
Lei Xu, Chao Su, Jixun Zhang, Fangfang Sheng
Analysis of Aging Damage Characteristics and Life Prediction for the Concrete Dam Subjected to the Earthquake .................................................................................................................................................. 792
Zhiguo Niu, Zhanxiang Mi
Analytical Approach to Solute Dispersion along and against Transient Groundwater Flow in a Homogeneous Finite Aquifer: Pulse Type Boundary Conditions ........................................................................................................... 796
Mritunjay Kumar Singh, Nav Kumar Mahato, Vijay P. Singh
Analysis on Blocking Impact of Right Platform of Xin’an River Dam Based on Saturated-Unsaturated Theory .......................................................................................................................................................... 809
Zhen-Zhong Shen, Zhi Wang, Li-Qun Xu, Bai-Song Nie, Chao-Xin Shao
Creep Damage Analytical Model of RCCD .................................................................................................................. 818
Lan-Ting Zhou, Xuezhi Sun, Yong-Ming Sun, Fen-Fen Feng
Effect of Typical Extreme Environments on Concrete Dam .......................................................................................... 828
Yan Xiang, Hui Yuan, Zhan-Jun Wang, Zi-Yang Li, Yun-Jie Guan
Effects of Reservoir Models on Dynamic Characteristics and Dynamic Response of High Arch Dams ................. 840
Lanhao Zhao, Xueqian Wang, Tongchun Li
Evaluation of Water Conservancy Project Modernization Based on Rough Set Theory ............................................. 850
Yuqin Gao, Guohua Fang, Chengshi Lian
Face Slab Dispatch Detection of Concrete Faced Rock-Fill Dam Based on Nature Frequency ................................. 858
Dongqian Zheng, Lin Cheng, Xiaoji Li
Finite Element Simulation of the Coupled Heat-Fluid Transfer Problem with Phase Change in Frozen Soil ........................................................................................................................................... 867
Lina Guo, Tongchun Li, Zhiwei Niu
Implementation of Fictitious Crack Model Using Mixed Freedom Finite Element Method .................................... 878
Lanhao Zhao, Tongchun Li, Tianyou Yan
SYMPOSIUM 5: NEW DEVELOPMENT AND CHALLENGING ISSUES IN 21ST CENTURY ENGINEERING EDUCATION IN DYNAMICS, CONTROLS, AND STRUCTURES

Developing New Courses in the Engineering Technology Curriculum Based on the Program Outcome
Result .................................................. 1110
Shahryar Daraycm, Xuemin Chen, David Olowokere

Dynamic Monitoring of an Experimental Cable-Stayed Bridge Model Using Wireless Sensor Network .......................................................... 1118
Chengyin Liu, Jun Teng, Haijing Zhang, Xianyin He, Yukun Guo

Experimental Research on Damage Identification of Wind Turbine Blade by PZT Wave Based Method .................................................. 1128
S. Yan, X. Y. Wu, G. Song, H. Yan

H_inf Norm Based Optimal Design of Liquid Dampers for Seismic Vibration Control .......................................................... 1135
L. Huo, W. Shen, H. Li

Increasing Interest of High School Students in Engineering through Summer Education .................................................. 1143
F. Qiao, K. Godazi, L. Yu

Labs-to-Go System Identification Experiments .................................................. 1151
J. B. Dabney, G. Song

Numerical Simulation of Dynamic Response of Buried Pipeline by Ground Explosion .................................................. 1159
S. Yan, Y. R. Xu, H. Y. Cheng

Oilsands Tailings Characterization Using a Robotic System .................................................. 1167
Nicolas Olmedo, M. G. Lipssett

Practical Structural Health Monitoring Systems in Large Space Structures .................................................. 1177
Jun Teng, Yaping Xiao, Chengyin Liu, Hongtao Yu, Haitao Liu

Predictive Study on Ultimate Bearing Capacity of Static Pressure Pipe Pile Based on Grey Support Vector Machine .................................................. 1187
Jianbin Zhao, Chao Xu, Yuyan Yan, Jianqiu Ma

The Analysis of Wind Vibration Coefficient of Long-Span Dome Structures with Different Thickness .................................................. 1196
Debin Ren, Yu Qu, Lili Yang

The Feasibility Analysis on Applying the Hot Dry Rock for Heating Supply in Shenyang .................................................. 1205
Jianbin Zhao, Xiaoyan Feng, Kun Zhao, Jianqiu Ma

Virtual and Remote Laboratory Framework Development for Engineering Technology Education—A Case Study .................................................. 1211
Daniel Osakue, Xuemin Chen, Osman Ahmed, Darayam Shahryar, David Olowokere

SYMPOSIUM 6: BALLISTIC IMPACT AND CRASHWORTHINESS RESPONSE OF AEROSPACE STRUCTURES

A Meso-Macro Mechanical Approach to Analyzing Triaxially-Braided Composites with Failure Subjected to Impact .................................................. 1218
W. Z. Nie, W. K. Binienda

ES2012 Ballistic Impact and Parameters Sensitivity of Ceramic Aerospace Materials at Room Temperatures .................................................. 1227
F. Abd, C. Godines, W. Troha, G. Morscher, Sung Choi

Ballistic Impact Testing of Aluminum 2024 and Titanium 6Al-4V for Material Model Development .................................................. 1244

Characterization and Analysis of Triaxially Braided Polymer Composites under Static and Impact Loads .................................................. 1254
Robert K. Goldberg, Gary D. Roberts, Brina J. Blinzler, Lee W. Kohlman, Wieslaw K. Binienda

Finite Element Modeling of Thermal Cycling Induced Microcracking in Carbon/Epoxy Triaxial Braided Composites .................................................. 1264
Chao Zhang, Wieslaw K. Binienda, Gregory Morscher, Richard E. Martin, Lee W. Kohlman

Improvements to Dry Fabric Modeling for Ballistic Mitigation Systems .................................................. 1275
A. Deivanayagam, B. Mobasher, S. D. Bajaj

Macro-Mechanical Approach to Modeling Barely Visible Damage in Braided Composites .................................................. 1285
Brina J. Blinzler, Wieslaw K. Binienda

Sand Impact Tests of a Half-Scale Crew Module Boilerplate Test Article .................................................. 1294
Gregory J. Vastilakos, Robin C. Hardy

Simulating the Response of a Composite Honeycomb Energy Absorber, Part 1: Dynamic Crushing of Components and Multi-Terrain Impacts .................................................. 1305
K. Jackson, E. Fasanella, M. Polanco
Simulating the Response of a Composite Honeycomb Energy Absorber, Part 2: Full-Scale Impact Testing ................................................................. 1329
E. L. Fasanella, M. S. Annett, K. E. Jackson, M. A. Polanco

SYMPOSIUM 7: SENSORS AND STRUCTURES IN CHALLENGING ENVIRONMENTS

A Closed-Form Approach to Tracking Control of Nonlinear Uncertain Systems Using the Fundamental Equation .................................................. 1339
F. E. Udwadia, T. Wanichanon

A Constrained Motion Approach to the Synchronization of Multiple Coupled Slave Gyroscopes .............................................................. 1349
Harshavardhan Mylapilli, Firdaus E. Udwadia

A Unified Approach to the Modeling and Control of Multi-Scale Dynamical Systems ................................................................. 1361
F. E. Udwadia, A. D. Schutte

Active Interfacial Performance Monitoring for Concrete Filled Steel Tube with Embedded PZT Techniques Using Power Spectral Density Analysis .................................................. 1371
B. Xu, Bing Li, G. Song

Commissioning and Vibration Isolation of a Low Cost UAS for Industrial and Environmental Remote Sensing Applications .......................... 1380
J. Yuen, S. Dwyer, A. Kotchon, W. Moussa, M. Lipsen

Distributed Fiber Bragg Grating Sensors for Monitoring Cracks in Concrete Structures ................................................................. 1390
Tengfei Bao

Frequency Analysis of a Frame-Membrane Lunar Habitat Considering Extreme Temperatures and Internal Pressure ........................................ 1400
Ramesh B. Malla, Kevin M. Brown

GPS-Assisted EFIS Airspeed Calibration .................................................. 1413
James B. Dabney

New Solutions to the Exact Formation-Keeping Control of Satellites with Attitude Constraints .............................................................. 1423
Firdaus Udwadia, Hancheol Cho

Smart Guide Signing System Using RFID As an Intelligent Sensor ................................................................. 1433
F. Qiao, L. Yu, R. Fatholahzadeh, X. Yuan

The Virtual Autonomous Navigation Environment: High Fidelity Simulations of Sensor, Environment, and Terramechanics for Robotics .................. 1441
C. Goodin, T. R. George, C. L. Cummins, P. J. Durst, B. Q. Gates, G. B. McKinley

SYMPOSIUM 8: “VISION THEME” IN AEROSPACE ENGINEERING

Applying a Design-to-Evolve Approach to Early Lunar Settlements ........................................................................... 1448
Thomas Matula, Kevin A. Greene

Contour Crafting Simulation Plan for Lunar Settlement Infrastructure Buildup ................................................................. 1458
B. Khoshnevis, A. Carlson, N. Leach, M. Thangavelu

Federated Simulation and Gaming Framework for a Decentralized Space-Based Resource Economy ............................................................. 1468
P. T. Grogan, O. L. De Weck

Lunabotics Mining Competition: Inspiration through Accomplishment ................................................................. 1478
R. P. Mueller

Lunar Real Estate Development ........................................................................... 1498
David M. Ladewig

Mars As a Destination in a Capability-Driven Framework ........................................................................... 1505
S. J. Hoffman, B. G. Drake, J. D. Baker, S. A. Voels

NASA Human Spaceflight Architecture Team: Cis-Lunar Analysis ........................................................................... 1515
M. Lupisella, M. R. Bobskill

NASA Human Spaceflight Architecture Team: Lunar Destination Activities ........................................................................... 1525
J. F. Connolly, R. P. Mueller, R. J. Whitley

NASA’s Plans for Human Exploration of Near-Earth Asteroids ........................................................................... 1548
V. P. Friedensen, D. D. Mazanek
