## 1 Introduction
Xiaoli Chu, David López-Perez, Fredrik Gunnarsson and Yang Yang

1.1 Mobile data explosion and capacity needs                                      1
1.2 Capacity and coverage solutions                                                3
1.2.1 Improving existing macrocell networks                                       4
1.2.2 Network base station densification                                           4
1.2.3 Indoor capacity and coverage                                                4
1.2.4 Heterogeneous cellular networks                                            5
1.3 Heterogeneous cellular network nodes                                          5
1.3.1 Remote radio heads                                                           6
1.3.2 Micro base stations                                                          6
1.3.3 Pico base stations                                                           6
1.3.4 Femtocell access points                                                      7
1.3.5 Relay nodes                                                                  7
1.4 3GPP LTE-Advanced heterogeneous cellular networks                             7
1.5 Heterogeneous cellular network challenges                                     8
1.5.1 Optimal network evolution path                                              8
1.5.2 Access control                                                               9
1.5.3 Mobility and handover                                                        9
1.5.4 Self-organizing networks                                                     10
1.5.5 Intercell interference                                                       10
1.5.6 Intersite coordination                                                       11
1.5.7 Energy efficiency                                                            12
1.5.8 Backhaul                                                                    12
References                                                                      13
2 Radio propagation modeling
Zhihua Lai, Guillaume Villemaud, Meiling Luo and Jie Zhang

2.1 Introduction 15
2.2 Different types of propagation model 16
  2.2.1 Empirical models 17
  2.2.2 Deterministic models 19
  2.2.3 Semi-deterministic models 33
  2.2.4 Hybrid models 39
2.3 Clutter and terrain 40
2.4 Antenna radiation pattern 41
2.5 Calibration 42
2.6 MIMO channel models 42
  2.6.1 Geometry-based stochastic channel models 44
  2.6.2 3GPP SCM and WINNER I model 46
  2.6.3 WINNER II model 47
  2.6.4 COST 259/273/2100 MIMO channel models 48
  2.6.5 Perspectives of channel modeling 51
2.7 Summary and conclusions 52
References 52

3 System-level simulation and evaluation models
David López-Pérez and Mats Folke

3.1 Introduction 57
3.2 System-level simulation 58
3.3 Static versus dynamic system-level simulations 59
  3.3.1 Static snapshot-based approaches 59
  3.3.2 Dynamic event-driven approaches 60
3.4 Building blocks 60
  3.4.1 Wrap-around 60
  3.4.2 Shadow fading: auto- and cross-correlation 62
  3.4.3 Multi-path fading: International Telecommunication Union
      (ITU) and Typical Urban (TU) models 65
  3.4.4 Antenna patterns 68
  3.4.5 Signal quality: maximal ratio combining (MRC) and
      exponential effective SINR mapping (EESM) 70
3.5 3GPP reference system deployments and evaluation assumptions 71
  3.5.1 Homogeneous deployments 72
  3.5.2 Heterogeneous deployments 73
3.6 Placing of low-power nodes and users 78
  3.6.1 Macrocells overlaid with indoor or outdoor picocells or relays 78
  3.6.2 Macrocells overlaid with indoor femtocells 80
3.7 Traffic modeling 82
  3.7.1 Full buffer model 82

6 Self-organization 145
Fredrik Gunnarsson

6.1 Introduction 145
6.2 Management architecture 146
6.3 Self-configuration 147
6.3.1 Planning 148
6.3.2 Installation 149
6.4 Self-optimization 151
6.4.1 Automatic neighbor relation 152
6.4.2 Automatic cell identity management 156
6.4.3 Random access optimization 158
6.4.4 Mobility robustness optimization 161
6.4.5 Mobility load balancing 166
6.4.6 Transmission power tuning 167
6.4.7 Coverage and capacity optimization 169
6.5 Self-healing 170
6.6 Performance monitoring 171
6.6.1 Minimization of drive tests 171
6.6.2 Heterogeneous cellular network monitoring 173
7 Dynamic interference management
Ismail Güvenç, Fredrik Gunnarsson and David López-Pérez

7.1 Excessive intercell interference 179
7.1.1 Transmission power difference between nodes 180
7.1.2 Low-power node range expansion 181
7.1.3 Closed subscriber group access 181
7.2 Range expansion 181
7.2.1 Definition of range expansion 182
7.2.2 Downlink/uplink coverage imbalance 183
7.2.3 Behavior of range expansion 184
7.3 Intercell interference coordination 186
7.4 Frequency-domain intercell interference coordination 186
7.4.1 Frequency-domain intercell interference coordination in LTE 187
7.4.2 Carrier-based intercell interference coordination 187
7.4.3 Uplink interferer identification 189
7.5 Power-based intercell interference coordination 189
7.5.1 Uplink power-based intercell interference coordination 190
7.5.2 Downlink power-based intercell interference coordination 190
7.6 Time-domain intercell interference coordination 192
7.6.1 Almost blank subframes 194
7.6.2 Almost blank subframes for range-expanded picocells 196
7.6.3 Reduced-power subframes and UE interference cancellation 198
7.7 Performance evaluations 199
7.7.1 Power-based and time-domain intercell interference coordination 199
7.7.2 Performance analysis for time-domain intercell interference coordination 202
7.7.3 Coverage analysis for time-domain intercell interference coordination and range expansion 204
7.7.4 Capacity analysis for time-domain intercell interference coordination and range expansion 206
7.7.5 Reduced-power ABS and UE interference cancellation 209
7.8 Summary and conclusions 212

9 Mobility and handover management 245
Huaxia Chen, Shengyao Jin, Honglin Hu, Yang Yang, David López-Pérez, Ismail Güvenç and Xiaoli Chu

9.1 Introduction 245
9.2 Mobility management in RRC-connected state 246
  9.2.1 Overview of the handover procedure in LTE systems 247
  9.2.2 Handover failures and ping-pongs 254
  9.2.3 Improved schemes for mobility management in RRC-connected state 258
9.3 Mobility management in RRC-idle state 263
  9.3.1 Overview of cell selection/reselection procedure 263
  9.3.2 Improved schemes for mobility management in RRC-idle state 266
9.4 Mobility management in heterogeneous cellular networks 272
  9.4.1 Range expansion, almost blank subframes, and HO performance 273
  9.4.2 HCN mobility performance with 3GPP Release-10 eICIC 276
  9.4.3 Mobility-based intercell interference coordination for HCNs 279
9.5 Conclusion 281
Copyright notices 281

11 Network MIMO techniques 312
Gan Zheng, Yongming Huang and Kai-Kit Wong

11.1 Introduction 312
11.2 General principles of network MIMO
  11.2.1 Problems of single-cell processing 313
  11.2.2 Advantages of multi-cell processing 314
  11.2.3 Capacity results 315
  11.2.4 Categories of network MIMO 318
11.3 Application scenarios of network MIMO in HCN
  11.3.1 Backhaul limit in HCN 321
  11.3.2 Clustering mechanism for HCNs 321
  11.3.3 CSI sharing 322
11.4 Distributed downlink coordinated beamforming for macrocell network
  11.4.1 System model and problem formulation 324
  11.4.2 Distributed multi-cell beamforming based on interference leakage 326
  11.4.3 Distributed multi-cell beamforming based on max–min SINR 326
  11.4.4 Analysis of distributed implementation 333
  11.4.5 Simulation results 334
11.5 Downlink coordinated beamforming applications in HCN
  11.5.1 System model 337
  11.5.2 Downlink multi-cell beamforming approaching Pareto optimality with max–min fairness 339
  11.5.3 Performance analysis 341
  11.5.4 Distributed implementation 344
  11.5.5 Simulation results 344
11.6 The road ahead of network MIMO in HCN 346
11.7 Summary and conclusions 348

12 Network coding
Haishi Ning and Cong Ling

12.1 Introduction
12.2 Coding opportunities in heterogeneous cellular networks
   12.2.1 An upper bound on coding gain without geometry consideration
   12.2.2 An upper bound on coding gain with geometry consideration
   12.2.3 Generalized butterfly network
   12.2.4 Necessary condition for network coding gain
   12.2.5 Supporting examples
12.3 Efficiency and reliability
   12.3.1 Issues of naïve interference cancellation
   12.3.2 WNC-based partial interference cancellation strategy
   12.3.3 Practical considerations
   12.3.4 Diversity–multiplexing tradeoff analysis
12.4 Construction of distributed coding solutions
12.5 Summary and conclusion

13 Cognitive radio
Miguel López-Benítez

13.1 Introduction
13.2 Cognitive radio techniques
   13.2.1 Spectrum awareness
   13.2.2 Spectrum selection
   13.2.3 Spectrum sharing
   13.2.4 Spectrum mobility
   13.2.5 Summary of cognitive radio techniques and cross-layer design
13.3 Application scenarios for cognitive radio in heterogeneous cellular networks
   13.3.1 Rural broadband
   13.3.2 Dynamic backhaul
   13.3.3 Cognitive ad hoc networks
   13.3.4 Capacity extension in cellular networks
   13.3.5 Direct UE-to-UE communication in cellular networks
   13.3.6 Coordination and cognitive X2 links
   13.3.7 Cognitive femtocells
13.4 Standardization activities: the future of cognitive radio systems
13.5 Summary and conclusions
