List of Figures, Tables, Boxes ................................................................................................. VI
Glossary .................................................................................................................................. IX
Introduction ............................................................................................................................... 1
I. Theoretical and Conceptual Framework: A Bourdieuan Approach to Vulnerable Food Sovereignty in Circumstances of Global and Social Change ................................................................. 7
   1. Food System Research through a geographical lens – contradictions and trends ....... 7
   2. Social or global change or both? ..................................................................................... 14
   3. Social vulnerability in food and nutrition among Hyderabad’s lower middle classes ................................................................. 17
      3.1 Livelihood approach as analytical tool to measure vulnerability in food and nutrition ........................................................ 24
      3.2 Risk perception analysis as analytical tool to examine the vulnerability context .......... 26
      3.3 Vulnerability among lower middle classes? Who are they? .............................................. 29
   4. Developing a Bourdieuan approach to vulnerable food sovereignty ......................... 33
      4.1 “We are where we eat” – Bourdieu’s theory in socio-spatial analyses and South Asia ................................................................. 33
      4.2 Habitus-Field complex ............................................................................................... 37
         4.2.1 Habitus .................................................................................................................. 39
         4.2.2 Field ..................................................................................................................... 44
         4.2.3 Capitals .................................................................................................................. 49
      4.3 Considerations in applying Bourdieu’s social theory to a South Asian context ....... 54
      4.4 The Bourdieuan approach to the topic: Defining spaces of possible within the field of food ............................................................................. 56
   5. Methods and Methodology ............................................................................................... 60
      5.1 Methodological framework ............................................................................................. 62
      5.2 Sampling ......................................................................................................................... 64
      5.3 Choosing of research areas ............................................................................................ 65
      5.4 Data collection ................................................................................................................. 65
      5.5 Analysis of collected data ............................................................................................. 71
      5.6 Reflections, research problems and limitations of research ......................................... 72
II. Connecting Food System and Food Culture ................................................................. 74
   1. Global food needs and trends in a global food economy ............................................... 74
      1.1 Global change and the globalization of food ................................................................. 77
      1.2 Economical dimension: trade, global markets and prices .......................................... 79
         1.2.1 Price formation ........................................................................................................ 81
         1.2.2 Rice crisis rhymes with price crisis ........................................................................ 82
         1.2.3 Global food regimes ................................................................................................. 85
      1.2.4 Commercial players invading production, processing and retail markets ....... 87
      1.3 Socio-political dimension: land conflicts and security ............................................... 90
      1.4 Ecological dimension: effect of climate change on agro-systems and resource depletion ................................................................. 93
      1.5 Cultural dimension: a global food culture .................................................................... 95
1.2.3 The challenge of feeding a megacity – building bridges for multilevel governance

1.2.4 Spatial distribution: the changing urban landscape due to players’ (re-)positioning in the field of food

1.2.5 Vendors’ emic perceptions on transformation (the vending habitus) and a political-bureaucratic perspective on change

2. Defining the lower middle classes’ space of possibles

2.1 Introduction to study areas

2.2 The lower middle classes’ reality – perceptions and definitions

2.2.1 Change - modern lifestyles and eating habits - new health threats

2.2.2 Food risks, life values and concerns

2.2.3 Role and definition of food and self-definition of nutritional status

2.2.4 Beauty ideals and health concepts

2.2.5 Food safety

2.2.6 Role of traditional knowledge in ‘modern’ times

2.2.7 The romanticized image of rural agriculture

2.2.8 Financial recession, food insecurity and price hikes

2.2.9 Perceptions of ‘middle class’

2.3 Knowledge acquisition and informational sources of LMC households

2.4 Capital profile: composition of human, economic and social capital

2.4.1 Occupational profile

2.4.2 Educational profile

2.4.3 Income profile

2.4.4 Living space and household assets

2.4.5 Social networks in food provisioning and social security

2.5 Food consumption profile – cooking, eating and shopping

2.5.1 Cooking practices

2.5.2 Eating habits

2.5.3 Shopping behavior

2.5.4 Practices of change

3. The group habitus as a determinant for coping and adaptation - Setting the course for the future
3.1 Vulnerability analysis and profile of urban LMC households ......................... 326

3.2 Household food security and the impact of food price hikes on food/nutritional security .......................................................... 330

3.3 The changing space of possibles: mitigation, adaptation, action .................... 332

3.4 Positioning in the field of food: Lower middle class habitus and its role in negotiations .......................................................... 336

3.5 The attempt of sketching a group habitus ............................................. 338

3.5.1 Outline of social milieus among LMCs – a typification .......................... 340

3.5.2 Degree of sustainability and resilience in 'traditional' households – a summary of areas where change has become ‘effective’ ......................... 345

3.5.3 Cultural barriers, socio-economic and systemic constraints to effective adaptation and mitigation ............................................ 348

3.6 Potential for modifications in lifestyle towards a sustainable diet and lifestyles. 359

Conclusion ........................................................................................................... 363
