Embedded Software Engineering (ESE)

ESE Session 1: Model-Based Development

DiplodocusDF, a Domain-Specific Modelling Language for Software Defined Radio Applications ................................................................. 1

Jair Gonzalez-Pina, Rabéa Ameur-Boulifa, and Renaud Pacalet

A MDD Approach for RTOS Integration on Valid Real-Time Design Model ................................................................. 9

Rania Mzid, Chokri Mraidha, Jean-Philippe Babau, and Mohamed Abid

Multi-view Power Modeling Based on UML, MARTE and SysML ................................................................. 17

Carlos Gomez, Julien DeAntoni, and Frédéric Mallet

ESE Session 2: Formal Methods

A Property-Based Proof System for Contract-Based Design ................................................................. 21

Alessandro Cimatti and Stefano Tonetta

Max-Plus Algebraic Throughput Analysis of Synchronous Dataflow Graphs ................................................................. 29

Robert de Groote, Jan Kuper, Hajo Broersma, and Gerard J.M. Smit
ESE Session 3: Certification and Tool Support

A Framework for the Development of Parallel and Distributed Real-Time Embedded Systems .................................................. 39

Ricardo Garibay-Martinez, Luis Lino Ferreira, and Luis Miguel Pinho

Structuring Modular Safety Software Certification by Using Common Criteria Concepts ......................................................... 47

Christopher Preschern and Kurt Dietrich

Database Proxy Tool Support in an AUTOSAR Development Environment ................................................................. 51

Andreas Hjertström, Dag Nyström, and Mikael Sjödin

ESE Session 4: Analysis and Synthesis

Analyzing Long-Running Controller Applications for Specification Violations Based on Deterministic Replay ........................................ 55

Roland Schatz and Herbert Prahofer

Varying Topology of Component-Based System Architectures Using Metaheuristic Optimization ................................................... 63

Ramin Etemaadi and Michel R.V. Chaudron

Towards Automatic Synthesis of Hardware-Specific Code in Component-Based Embedded Systems ........................................ 71

Luka Lednicki, Ivica Crnković, and Mario Žagar

A Bridge from System to Software Development for Safety-Critical Automotive Embedded Systems ............................................... 75

Roland Mader, Gerhard Grießnig, Eric Armengaud, Andrea Leitner, Christian Kreiner, Quentin Bourrouilh, Christian Steger, and Reinhold Weiß

Real-Time Component Integration Using Runnable Virtual Nodes .................................................................................. 80

Rafia Inam, Jukka Mäki-Turja, Mikael Sjödin, and Jiří Kunčar

Model-Based Development, Components, and Services (MOCS)

MOCS Session 1: Product Lines

An Aspect-Based Feature Model for Architecting Component Product Lines .................................................................. 85

Leonardo P. Tizzei, Cecilia M.F. Rubira, and Jaejoon Lee

TIRT: A Traceability Information Retrieval Tool for Software Product Lines Projects .................................................. 93

Wylliams Barbosa Santos, Eduardo Santana de Almeida, and Silvio Romero de L. Meira

CodeScoping: A Source Code Based Tool to Software Product Lines Scoping ........................................................................ 101

Thiago Fernandes Lins de Medeiros, Eduardo Santana de Almeida, and Silvio Romero de Lemos Meira

A Lightweight Approach for Product Line Scoping ......................................................................................................... 105

Markus Nöbauer, Norbert Seyff, Iris Groher, and Deepak Dhungana
MOCS Session 2: Embedded Systems

Ensuring Component Application Consistency on Small Devices: A Repository-Based Approach .................................................................109
Premek Brada and Kamil Ježek

Towards a Model-Based Approach for Allocating Tasks to Multicore Processors .................................................................117
Juraj Feljan, Jan Carlson, and Tiberiu Seceleanu

MOCS Session 3: Extra-functional Properties

Reliability Prediction for Service Component Architectures with the SCA-ASM Component Model .................................................................125
Elvinia Riccobene, Pasqualina Potena, and Patrizia Scandurra

Path Coverage Criteria for Palladio Performance Models .................................................................133
Henning Groenda

Using Virtual Machine Security to Reinforce Components Constraints .................................................................138
Aurélio A.M. Matsui, Straus Michalsky, and Marco Aurélio Gerosa

MOCS Session 4: Modeling Components

Toward Model-Based Trade-off Analysis of Non-functional Requirements .................................................................142
Mehrdad Saadatmand, Antonio Cicchetti, and Mikael Sjödin

An MDE Approach for Runtime Monitoring and Adapting Component-Based Systems: Application to WIMP User Interface Architectures .................................................................150
Javier Criado, Luis Iribarne, Nicolás Padilla, Javier Troya, and Antonio Vallecillo

X-MAN: An MDE Tool for Component-Based System Development .................................................................158
Kung-Kiu Lau and Cuong M. Tran

A Model-Driven Engineering Framework for Fault Tolerance in Dependable Embedded Systems Design .................................................................166
Adel Ziani, Brahim Hamid, and Jean-Michel Brueil

Automatic Adaptation of Transformations Based on Type Graph with Multiplicity .................................................................170
Quyet-Thanh Pham and Antoine Beugnard

MOCS Session 5: Frameworks and Architecture

Testing a Component-Based Application for Road Traffic Crossroad Control Using the SimCo Simulation Framework .................................................................175
Tomáš Potuzák, Richard Lipka, Premek Brada, and Pavel Herout

ORCA: Architecture for Business Tier Components Driven by Dynamic Adaptation and Based on Call Level Interfaces .................................................................183
Óscar Mortágua Pereira, Rui Luís Aguiar, and Maribel Yasmina Santos
MOCS Session 6: Finding and Building Components

Extracting Components from Open Source: The Component Adaptation Environment (COPE) Approach ................................................................. 192

George Kakarontzas, Ioannis Stamelos, Stefanos Skalistis, and Athanasios Naskos

Federated Search for Open Source Software Reuse ................................................................................. 200

Fotios Kokkoras, Konstantinos Ntonas, Apostolos Kritikos, George Kakarontzas,
and Ioannis Stamelos

Application and UI Composition Using a Component-Based Description and Annotations ................................................................. 204

Christian Brel, Philippe Renevier-Gonin, Anne-Marie Pinna-Déry, and Michel Riveill

MOCS Session 7: Modeling Services and Components

Engineering Emergent Semantics into Pervasive Resource Discovery .................................................. 208

Mauro Caporuscio

Low-Level Profiling and MARTE-Compatible Modeling of Software Components for Real-Time Systems .................................................................................. 216

Konstantinos Triantafyllidis, Egor Bondarev, and Peter H.N. de With

LogOS: An Automatic Logging Framework for Service-Oriented Architectures ........................................ 224

Séphane Frénot and Julien Ponge

FOAM: A Lightweight Method for Verification of Use-Cases ......................................................................... 228

Viliam Simko, Petr Hnětynka, Tomas Bures, and František Pilsil

A Model-Driven Dependability Analysis Method for Component-Based Architectures .................................. 233

Barbara Gallina, Muhammad Atif Javed, Faiz Ul Muram, and Sasikumar Punnekkat

MOCS Session 8: Special Sessions Papers: Cyber-Physical Systems (Invited Papers)

DEZENT—A Cyber-Physical Approach for Providing Affordable Regenerative Electric Energy in the Near Future ............................................................................................... 241

Horst F. Wedde

Applying the Organic Robot Control Architecture ORCA to Cyber-Physical Systems ........................................ 250

Raphael Maas, Erik Maehle, and Karl-Erwin Großpietsch

Bee-Inspired Road Traffic Control as an Example of Swarm Intelligence in Cyber-Physical Systems ......................................................... 258

Sebastian Senge and Horst F. Wedde
# Software Process and Product Improvement (SPPI)

## SPPI Session 1: Agile and Lean Processes

Adapting the Lean Enterprise Self-Assessment Tool for the Software Development Domain ................................................................. 266

_Teemu Karvonen, Pilar Rodriguez, Pasi Kuvaja, Kirsi Mikkonen, and Markku Oivo_

Investigating Daily Team Meetings in Agile Software Projects ................................................................. 274

_Viktoria Gulliksen Stray, Nils Brede Moe, and Aybïke Aurum_

Organizational Values and Agile Methods Deployment ................................................................. 282

_Stavros Stavru_

## SPPI Session 2: Process Improvement and Quality Measurement and Assurance

_Rudolf Ramler, Dietmar Winkler, and Martina Schmidt_

A Case Study on Measuring Process Quality: Lessons Learned ................................................................. 294

_Ahmet Dikici, Oktay Turetken, and Onur Demirors_

From Assumptions to Context-Specific Knowledge in the Area of Combined Static and Dynamic Quality Assurance ................................................................. 298

_Frank Elberzhager and Thomas Bauer_

Micro Pattern Fault-Proneness ................................................................. 302

_Giuseppe Destefanis, Roberto Tonelli, Ewan Tempero, Giulio Concas, and Michele Marchesi_

## SPPI Session 3: Process and Product Modeling

_Fritz Stallinger and Robert Neumann_

Towards a Metamodel for Integrating Multiple Models for Process Improvement ................................................................. 315

_Edgar L. Banhesse, Clenio F. Salviano, and Mario Jino_

The Barriers to Traceability and their Potential Solutions: Towards a Reference Framework ................................................................. 319

_Gilbert Regan, Fergal McCaffery, Kevin McDaid, and Derek Flood_

A Practice for Recording Problem and Solution Domain Requirements in VLSRE ................................................................. 323

_Markus Ketanti, Jari Lehto, Sanja Aaramaa, and Pasi Kuvaja_
SPPI Session 4: Practical Experiences and New Ideas for Process Improvement

Nauman Bin Ali and Kai Petersen

Fostering Cross-site Coordination through Awareness: An Investigation of State-of-the-Practice through a Focus Group Study .................................................................337

Darja Smite and Torgeir Dingsøyr

Low Degree of Separation Does Not Guarantee Easy Coordination .................................................................345

Zane Galvina and Darja Smite

Special Session: MeSVAM—Measurement as a Strategy for Software Value Management

Managing Software Quality Requirements .................................................................349

Laura B. Phillips, Aybiike Aurum, and Richard Berntsson Svensson

Software Measurement in Software Engineering Education: A Delphi Study to Develop a List of Teaching Topics and Related Levels of Learning .................................................................357

Mónica Villavicencio and Alain Abran

Value-Based Coverage Measurement in Requirements-Based Testing: Lessons Learned from an Approach Implemented in the TOSCA Testsuite .................................................................363

Rudolf Ramler, Theodorich Kopetzky, and Wolfgang Platz

Software Management (SM)

SM Session 1

An Investigation of Software Effort Phase Distribution Using Compositional Data Analysis .................................................................367

Panagiota Chatzipetrou, Elpi Papatheocharous, Lefteris Angelis, and Andreas S. Andreou

Developers Motivation in Agile Teams .................................................................376

Claudia de O. Melo, Célio Santana, and Fabio Kon

A Fuzzy Multi Criteria Decision Making Approach to Software Life Cycle Model Selection .................................................................384

Mumin Hicdurmaz

Climbing the "Stairway to Heaven"—A Multiple-Case Study Exploring Barriers in the Transition from Agile Development towards Continuous Deployment of Software .................................................................392

Helena Holmström Olsson, Hiva Alahyari, and Jan Bosch
SM Session 2
Towards the Understanding and Classification of the Personality Traits of Software Development Practitioners: Situational Context Cards Approach ................................................. 400
Murat Yilmaz and Rory V. O'Connor

Guiding Testing Activities by Predicting Defect-Prone Parts Using Product and Inspection Metrics .................................................................................................................. 406
Frank Elberzhager, Stephan Kremer, Jürgen Münch, and Danilo Assmann

An Analysis of Accuracy and Learning in Software Project Estimating .................................. 414
A.H. Zapata and M.R.V. Chaudron

Pocket Estimator—A Commercial Solution to Provide Free Parametric Software Estimation Combining an Expert and a Learning Algorithm ...................................................... 422
Florian Schnitzhofer and Peter Schnitzhofer

Estimating the Return on Investment of Defect Taxonomy Supported System Testing in Industrial Projects ..................................................................................................................... 426
Michael Felderer and Armin Beer

Cloud Software (CS)

CLOUD Session 1: Cloud Technology
Feedback Control Algorithms to Deploy and Scale Multiple Web Applications per Virtual Machine ............................................................................................................................. 431
Adnan Ashraf, Benjamin Byholm, Joonas Lehtinen, and Ivan Porres

Towards Mobile Multimedia Mashup Architecture ..................................................................... 439
Mikko Hartikainen, Arto Salminen, and Jarno Kallio

CLOUD Session 2: Cloud Software
A Model for Global Software Development with Cloud Platforms ................................................. 446
Luisanna Cocco, Katuscia Mannaro, and Giulio Concas

Differentiation in the Cloud: Methodology for Integrating Customer Values in Experience Design ........................................................................................................................... 453
Andrey Sirotkin, Kaisa Koskela-Huotari, Kaarina Karppinen, Javier Del Ser, and Bronan McCabe

Author Index ................................................................................................................................. 460
