2 Stresses and strains: Elastic equilibrium

2.1 Introduction 53
2.2 Basic definition and sign conventions for stresses 53
2.3 Equations of static equilibrium 56
2.4 Concept of strain 61
2.5 Hooke's law 63
2.6 Plane strain problems 64
  2.6.1 Compatibility equation 65
  2.6.2 Stress function 67
  2.6.3 Compatibility equation in polar coordinates 68
2.7 Equations of compatibility for three-dimensional problems 71
2.8 Stresses on an inclined plane and principal stresses for plane strain problems 73
  2.8.1 Transformation of stress components from polar to Cartesian coordinate system 74
  2.8.2 Principal stress 75
  2.8.3 Mohr's circle for stresses 76
  2.8.4 Pole method for finding stresses on an inclined plane 78
2.9 Strains on an inclined plane and principal strain for plane strain problems 82
2.10 Stress components on an inclined plane, principal stress, and octahedral stresses: Three-dimensional case 84
  2.10.1 Stress on an inclined plane 84
  2.10.2 Transformation of axes 86
  2.10.3 Principal stresses 88
  2.10.4 Octahedral stresses 89
2.11 Strain components on an inclined plane, principal strain, and octahedral strain: Three-dimensional case 93

3 Stresses and displacements in a soil mass:
   Two-dimensional problems

3.1 Introduction 97
3.2 Vertical line load on the surface 97
  3.2.1 Displacement on the surface (z = 0) 100
3.3 Vertical line load on the surface of a finite layer 102
3.4 Vertical line load inside a semi-infinite mass 102
3.5 Horizontal line load on the surface 104
3.6 Horizontal line load inside a semi-infinite mass 107
3.7 Uniform vertical loading on an infinite strip on the surface 108
3.7.1 Vertical displacement at the surface \((z = 0)\) 113
3.8 Uniform strip load inside a semi-infinite mass 115
3.9 Uniform horizontal loading on an infinite strip on the surface 116
3.9.1 Horizontal displacement at the surface \((z = 0)\) 118
3.10 Triangular normal loading on an infinite strip on the surface 121
3.10.1 Vertical deflection at the surface 122
3.11 Vertical stress in a semi-infinite mass due to embankment loading 124

References 127

4 Stresses and displacements in a soil mass: Three-dimensional problems 129
4.1 Introduction 129
4.2 Stresses due to a vertical point load on the surface 129
4.3 Deflection due to a concentrated point load at the surface 131
4.4 Horizontal point load on the surface 132
4.5 Vertical stress due to a line load of finite length 134
4.6 Stresses below a circularly loaded flexible area (uniform vertical load) 137
4.7 Vertical displacement due to uniformly loaded circular area at the surface 147
4.8 Vertical stress below a rectangular loaded area on the surface 152
4.9 Deflection due to a uniformly loaded flexible rectangular area 156
4.10 Stresses in a layered medium 160
4.11 Vertical stress at the interface of a three-layer flexible system 162
4.12 Vertical stress in Westergaard material due to a vertical point load 165
4.13 Solutions for vertical stress in Westergaard material 167
4.14 Distribution of contact stress over footings 169
4.14.1 Foundations of clay 169
4.14.2 Foundations on sand 170
4.15 Reliability of stress calculation using the theory of elasticity 171

References 171
5 Pore water pressure due to undrained loading 173

5.1 Introduction 173
5.2 Pore water pressure developed due to isotropic stress application 175
5.3 Pore water pressure parameter B 177
5.4 Pore water pressure due to uniaxial loading 177
5.5 Directional variation of \( \Lambda_f \) 183
5.6 Pore water pressure under triaxial test conditions 183
5.7 Henkel's modification of pore water pressure equation 185
5.8 Pore water pressure due to one-dimensional strain loading (oedometer test) 189

References 191

6 Permeability 193

6.1 Introduction 193
6.2 Darcy's law 193
6.3 Validity of Darcy's law 196
6.4 Determination of the coefficient of permeability in the laboratory 198
   6.4.1 Constant-head test 199
   6.4.2 Falling-head test 200
   6.4.3 Permeability from consolidation test 201
6.5 Variation of the coefficient of permeability for granular soils 202
   6.5.1 Modification of Kozeny–Carman equation for practical application 208
6.6 Variation of the coefficient of permeability for cohesive soils 211
6.7 Directional variation of permeability in anisotropic medium 215
6.8 Effective coefficient of permeability for stratified soils 218
   6.8.1 Flow in the horizontal direction 219
   6.8.2 Flow in the vertical direction 221
6.9 Determination of coefficient of permeability in the field 222
   6.9.1 Pumping from wells 223
      6.9.1.1 Gravity wells 223
      6.9.1.2 Artesian wells 225
   6.9.2 Auger hole test 227
6.10 Factors affecting the coefficient of permeability 229
6.11 Electroosmosis 230
   6.11.1 Rate of drainage by electroosmosis 231
6.12 Compaction of clay for clay liners in waste disposal sites 234
References 238

7 Seepage 241

7.1 Introduction 241
7.2 Equation of continuity 241
   7.2.1 Potential and stream functions 243
7.3 Use of continuity equation for solution of simple flow problem 245
7.4 Flow nets 248
   7.4.1 Definition 248
   7.4.2 Calculation of seepage from a flow net under a hydraulic structure 249
7.5 Hydraulic uplift force under a structure 253
7.6 Flow nets in anisotropic material 254
7.7 Construction of flow nets for hydraulic structures on nonhomogeneous subsoils 257
7.8 Numerical analysis of seepage 261
   7.8.1 General seepage problems 261
   7.8.2 Seepage in layered soils 265
7.9 Seepage force per unit volume of soil mass 271
7.10 Safety of hydraulic structures against piping 273
7.11 Filter design 280
7.12 Calculation of seepage through an earth dam resting on an impervious base 283
   7.12.1 Dupuit's solution 283
   7.12.2 Schaffernak's solution 284
   7.12.3 L. Casagrande's solution 286
   7.12.4 Pavlovsky's solution 289
      7.12.4.1 Zone I (area agOf) 289
      7.12.4.2 Zone II (area Ogbd) 290
      7.12.4.3 Zone III (area bcd) 290
   7.12.5 Seepage through earth dams with \( k_x \neq k_z \) 291
7.13 Plotting of phreatic line for seepage through earth dams 294
7.14 Entrance, discharge, and transfer conditions of line of seepage through earth dams 296
7.15 Flow net construction for earth dams 298

8 Consolidation

8.1 Introduction 303

8.2 Theory of one-dimensional consolidation 305
  8.2.1 Constant u, with depth 310
  8.2.2 Linear variation of u 315
  8.2.3 Sinusoidal variation of u 315
  8.2.4 Other types of pore water pressure variation 319

8.3 Degree of consolidation under time-dependent loading 324

8.4 Numerical solution for one-dimensional consolidation 328
  8.4.1 Finite difference solution 328
  8.4.2 Consolidation in a layered soil 330

8.5 Standard one-dimensional consolidation test and interpretation 338
  8.5.1 Preconsolidation pressure 339
    8.5.1.1 Empirical correlations for preconsolidation pressure 343
    8.5.1.2 Empirical correlations for overconsolidation ratio 344
  8.5.2 Compression index 345

8.6 Effect of sample disturbance on the e versus log σ' curve 347

8.7 Secondary consolidation 349

8.8 General comments on consolidation tests 352

8.9 Calculation of one-dimensional consolidation settlement 356

8.10 Coefficient of consolidation 358
  8.10.1 Logarithm-of-time method 358
  8.10.2 Square-root-of-time method 359
  8.10.3 Su's maximum-slope method 360
  8.10.4 Computational method 361
  8.10.5 Empirical correlation 362
  8.10.6 Rectangular hyperbola method 362
  8.10.7 ΔH1 – t/ΔH1 method 364
  8.10.8 Early-stage log t method 364

8.11 One-dimensional consolidation with viscoelastic models 367

8.12 Constant rate-of-strain consolidation tests 373
  8.12.1 Theory 373
  8.12.2 Coefficient of consolidation 377
  8.12.3 Interpretation of experimental results 378

8.13 Constant-gradient consolidation test 380
  8.13.1 Theory 381
  8.13.2 Interpretation of experimental results 383
8.14 Sand drains 384
  8.14.1 Free-strain consolidation with no smear 386
  8.14.2 Equal-strain consolidation with no smear 388
  8.14.3 Effect of smear zone on radial consolidation 394
8.15 Numerical solution for radial drainage (sand drain) 394
8.16 General comments on sand drain problems 398

9 Shear strength of soils 403
  9.1 Introduction 403
  9.2 Mohr–Coulomb failure criterion 403
  9.3 Shearing strength of granular soils 405
    9.3.1 Direct shear test 405
    9.3.2 Triaxial test 409
    9.3.3 Axial compression tests 411
    9.3.4 Axial extension tests 413
  9.4 Critical void ratio 413
  9.5 Curvature of the failure envelope 415
  9.6 General comments on the friction angle of granular soils 417
  9.7 Shear strength of granular soils under plane strain conditions 417
  9.8 Shear strength of cohesive soils 422
    9.8.1 Consolidated drained test 423
    9.8.2 Consolidated undrained test 428
    9.8.3 Unconsolidated undrained test 431
  9.9 Unconfined compression test 435
  9.10 Modulus of elasticity and Poisson's ratio from triaxial tests 436
  9.11 Friction angles $\phi$ and $\phi_{\text{ult}}$ 439
  9.12 Effect of rate of strain on the undrained shear strength 440
  9.13 Effect of temperature on the undrained shear strength 443
  9.14 Stress path 445
    9.14.1 Rendulic plot 445
    9.14.2 Lambe's stress path 448
  9.15 Hvorslev's parameters 455
  9.16 Relations between moisture content, effective stress, and strength for clay soils 458
    9.16.1 Relations between water content and strength 458
    9.16.2 Unique effective stress failure envelope 458
9.16.3 Unique relation between water content and effective stress 461
9.17 Correlations for effective stress friction angle 462
9.18 Anisotropy in undrained shear strength 465
9.19 Sensitivity and thixotropic characteristics of clays 467
9.20 Vane shear test 472
  9.20.1 Correlations with field vane shear strength 477
9.21 Relation of undrained shear strength ($S_u$) and effective overburden pressure ($p'$) 478
9.22 Creep in soils 482
9.23 Other theoretical considerations: Yield surfaces in three dimensions 490
9.24 Experimental results to compare the yield functions 496
