## Contents

**Preface** v

1. Molecular Structures of Water and Its Features 1

1.1 The New Theory of Molecular Structure in Water and Experimental Evidences .................................... 1

1.1.1 The Structure of Water Molecule and Its Polarization Feature ........................................ 1

1.1.2 The Vibrational Feature of Water Molecule and Its Size ........................................ 6

1.1.3 The Energy of Water Molecule ........................................ 6

1.2 The New Theory of Water Molecules in Water and Its Experimental Evidences ............................. 10

1.2.1 The Features of Infrared Spectra of Absorption of Water ........................................ 10

1.2.2 The Chain and Cluster Structure of Molecules in Liquid Water ........................................ 13

1.3 The Verifications of Numerical Simulation of the New Theory ........................................ 21

1.3.1 The Methods of the Numerical Simulation and Their Results ........................................ 21

1.3.2 Quo et al.'s Methods of Numerical Simulation and Their Results ........................................ 23

1.3.3 Kuo et al.'s Result of Numerical Simulation of Structure of Water Molecules at Finite Temperature ........................................ 26

1.3.3.1 Low-energy structures: BH with OSS2 model ........................................ 27

1.3.4 The Icosahedral Cluster of 280 Water Molecules \((\text{H}_2\text{O})_{280}\) ........................................ 32

1.4 The Conformations of Self-assemble Experiments of the New Theory ........................................ 34
1.4.1 The Form of Helix Structure of Hydrogen-bonded Chains of Water Molecules in a Staircase Coordination Polymer ................................................................. 35
1.4.2 Dodecameric Cluster of Water Molecules Self-assembled in an Organic Supramolecular Complex of a Cryptand ................................................................. 38
1.4.3 Ring Self-assembled Structure of Water Molecules from Achiral Components ................................................................. 42
1.5 The Changes of Structure of Water Molecules with Varying Temperature ................................................................. 45
1.5.1 The Phase Diagram of Water ................................................................. 45
1.5.2 The Properties of Molecular Structure in Vapor Phase and Its Descriptions ................................................................. 49
1.5.3 The Molecular Structure of Water in Solid Phase and Its Properties ................................................................. 56
  1.5.3.1 The ordinary ice (Ih) ................................................................. 56
  1.5.3.2 The structure of ices II, III, IV and V ................................................................. 59
  1.5.3.3 The structures of ices VI, VII, VIII, IX and X ................................................................. 60
  1.5.3.4 The structures of ices XI, XII, XIII, XIV and XV ................................................................. 63
  1.5.3.5 The structures of vitreous ice and ice Ic ................................................................. 65
1.6 The Phase Diagram for the Structure of Water Molecules ................................................................. 67
1.7 The Energy Spectrum of Vibration of Water Molecules and Its Properties in Water ................................................................. 73
1.8 The Ionization of Water Molecules and Its Properties ................................................................. 80
References ................................................................. 82

2. The Properties of Water and Its Anomalies ................................................................. 89
2.1 The Basic Properties of Water ................................................................. 90
2.2 The Optical Properties of Water and Its Abnormal Effects ................................................................. 90
  2.2.1 Refractive Index of Water and Its Anomaly ................................................................. 90
  2.2.2 The Light Scattering of Water ................................................................. 100
  2.2.3 The Infrared Absorption of Water and Its Abnormal Effects ................................................................. 101
2.3 The Electromagnetic Properties of Water ................................................................. 104
  2.3.1 The Electromagnetic Properties of Water Molecules ................................................................. 104
  2.3.2 The Electric Features of Water and Its Singularities ................................................................. 105
2.3.3 The Features of Change of Electromagnetic Property of Water with Varying Electromagnetic and Static Magnetic Fields and Temperature 110

2.3.4 NMR Chemical Shift of Water and Its Peculiarities 116

2.4 Thermodynamic Properties of Water and Its Anomalies 118

2.4.1 Thermal Energy and the Specific Heat of Water and Their Temperature Dependences 118

2.4.2 The Features of Molar Volume and Coefficients of Thermal Expansion of Water 124

2.4.3 The Anomalous Peculiarities of the heat of fusion, Heat of Vaporization, Heat of Sublimation, Entropy of Vaporization and Thermal Conductivity of Water 128

2.4.4 Properties of Melting Point, Boiling Point Molar Heat of Vaporization, Critical Point of Water and Their Anomalies 131

2.4.5 The Properties of Thermal Diffusion Effect of Water and Its Anomaly 135

2.4.6 Thermodynamic Features of Differently Typical Water and Their Anomalies 139

2.4.6.1 The features of supercooled water 139

2.4.6.2 The properties of frozen water 140

2.4.6.3 The peculiarity of superheated water 140

2.4.6.4 Mpemba effect of water 141

2.5 The Mechanical Properties of Water and Its Anomalies 142

2.5.1 The Coefficients of the Compressibility of Water and Its Anomalies 142

2.5.2 The Viscosity of Water and Its Properties 146

2.6 The Properties of Changes in the Structure and Distribution of Molecules in Water in Different Cases 148

2.6.1 The Changes in the Molecular Structure of Water Under Action of High Pressure 148

2.6.2 The Changes in the Number of Nearest Neighbors of Water Molecules in Different Cases 149

2.6.3 The Properties of Motion of Hydrogen Atoms and Molecules in Water 150

2.6.4 The Changes of Vibrational States in Different Water 152

2.6.5 Changes of Thermodynamic Feature of H₂O and D₂O Liquids 152
2.6.6 The Influences of Solutes and Non-Polar Gases on the Features of Water and Its Solubility ........................................ 157
2.6.7 The Affections of Salt on Properties of Water .................. 159
2.6.8 The Features of Changes of Speed of Propagation of Sound in Water ................................................................. 161
2.6.9 Changes Density of Distribution of Molecules in Water and its Anomaly in Different Conditions ................................. 163

2.7 The Properties of Surface Water and Interfacial Water and Their Anomalies ......................................................... 167
2.7.1 The Features of Surface Tension Coefficient of Water and Its Anomalous Changes ...................................................... 167
2.7.2 The Surface is more Dense than that in Bulk ....................... 171
2.7.3 Thermodynamics of the Liquid–Gas Interface for Water ...... 171

2.8 The Quantum Effect of Water and Its Ultrafast Vibrational Dynamics ................................................................. 173
2.8.1 The Isotopic Quantum Effect of Water .............................. 173
2.8.2 The Nuclear Quantum Effect of Water .............................. 179
2.8.3 Unraveling Quantum Effect of Water and Its Validation .... 182
2.8.4 Ultrafast Vibrational Dynamics at Water Interfaces .......... 185

References ........................................................................ 190

3. The Magnetic Field Effects on Water and Its Magnetization 203
3.1 Investigations on the Interaction of Magnetic Field with Water .................................................................................... 203
3.2 Method of Magnetization of Water and Its Technique of Inspection ............................................................................. 210
3.2.1 The Correct Method of Magnetization of Water .......... 210
3.2.2 Identified and Inspected Technique of Magnetized Effect of Water ................................................................. 211
3.2.3 Ichiro et al.'s Mechanism of Magnetization of Water Cannot be Accepted ......................................................... 216
3.3 Basic Properties of Magnetized Water .................................. 217
3.3.1 Optical Features of Magnetized Water and Corresponding Light Spectra ................................................................. 217
3.3.1.1 Properties of visible and ultraviolet spectra of magnetized water ................................................................. 217
3.3.1.2 Raman spectra of scattering of magnetized water .......... 219
3.3.1.3 Features of infrared absorption of magnetized water ........................................ 220
3.3.2 The Changes of Mechanical Property of Magnetized Water .................................. 225
  3.3.2.1 Influence of magnetic field on surface tension force of water .......................... 225
  3.3.2.2 The changes of viscosity and rheology features of magnetized water .................. 228
  3.3.2.3 Influences of the magnetic field on the viscosity of magnetized water ................ 232
3.3.3 The Changes of Electromagnetic Property of Magnetized Water with Varying Externally Applied Field and Magnetized Times ................................................. 233
3.3.4 The Change of the Thermodynamic Feature of Water Resulting from the Magnetic Field ................................................................. 235
3.4 The Confirmation of Magnetism of Magnetized Water ............................................. 237
  3.4.1 Saturation and Memory Effects of Magnetized Water and Its Hysteresis Curve ............ 237
    3.4.1.1 Changed rules for magnetic effect on water with increase in magnetized time and magnetic field strength as well as its saturation effect ............................ 237
    3.4.1.2 Changes in the feature of magnetized water with decreasing magnetic field and its memory effect ................................................................. 240
    3.4.1.3 Hysteresis curve of magnetized water .................................................. 241
3.4.2 Feature of Interaction of Magnetized Water with Magnetic Nano-Materials ................. 243
3.4.3 Levitation of Magnetized Water in a Magnetic Field and Its Magnetism .................... 245
    3.4.3.1 Levitation of magnetized water and its properties .................................. 245
    3.4.3.2 Discussion of experimental results and the mechanism of magnetized water ........ 248
3.4.4 Measurement of Magnetized Strength of Magnetic Water ..................................... 252
3.5 Exploration of Mechanism of Magnetization of Water ........................................... 253
3.6 The Mechanism and Theory of Proton Transfer in Ice and Its Experimental Confirmation .......... 256
3.6.1 The Mechanism and Theory of Proton Transfer in Ice ........................................ 256
3.6.2 Features of Proton Transfer in Hydrogen-Bonded Systems .................................. 268
3.6.3 Mobility and Conductivity of the Protons Conductivity in Ice ............................ 272

3.7 Mechanism and Theory of Magnetization of Water ................................................. 284

3.8 Experimental Confirmation for the Correctness of Theory of Magnetized Water ........... 287

3.9 Instances of Application of Magnetized Water in Biology/Medicine and a Mechanism of Biological Effect of Magnetic Field ......................................................... 292
  3.9.1 Biological Effects of Magnetized Water ............................................................... 292
    3.9.1.1 Materials and instruments .............................................................................. 292
    3.9.1.2 The method of investigation ......................................................................... 293
    3.9.1.3 The experimental results .............................................................................. 295
    3.9.1.4 The discussion of the results ......................................................................... 295
  3.9.2 The Distribution and Bio-Functions of Water in Life Bodies and a Mechanism of Biological Effect of Magnetic Field ......................................................... 299

3.10 An Example of Application of Magnetized Water in Industry ................................ 302
  3.10.1 Enhancement of the Hydrophilic Features of Magnetized Water ........................ 302
  3.10.2 Changes in the Properties of Concrete Arising from Magnetized Water .............. 303
    3.10.2.1 Preparation of concrete containing magnetized water ................................ 303
    3.10.2.2 Influences of magnetized water on the physical property of concretes ....... 303

3.11 Some Examples of Application of Magnetized Water in Agriculture .......................... 310

References ........................................................................................................................ 317

4. Water Flow and Its Non-Linear Excitation States ......................................................... 325
  4.1 Properties of Steady Flow .......................................................................................... 325
    4.1.1 The States of Laminar Flow of Water ................................................................ 325
    4.1.2 The Relationship of Flow Velocity with Flow Quantity of Water ..................... 327
4.1.3 The Relationship between Flow Velocity and Pressure and Bernoulli’s Equation .......................... 328
4.1.4 The Relationship between Flow Quantity and Pressure ......................................................... 328
4.2 Water’s Turbulent Flow and Its Properties ................................................................. 329
4.2.1 Water’s Turbulent Flow and the Reynolds Number ..................................................... 329
4.2.2 The Essential Differences between Laminar and Turbulent Flows of Water ....................... 331
4.2.3 The Dynamic Equation of Movement of the Turbulence ..................................................... 332
4.2.4 The Mechanism of Form of Turbulence and Its Non-Linear Essence .............................. 333
4.3 KdV Soliton Excitation in Water and Its Properties .................................................. 338
4.3.1 Observation of KdV Soliton Excitation in Water ....................................................... 338
4.3.2 Theoretical Description of KdV Soliton in Water ....................................................... 339
4.4 Observation of Non-Propagating Hydrodynamic Soliton in Water and Its Properties .......... 344
4.4.1 Experimental Observation of Non-Propagating Solitary Wave in Water ............................. 344
4.4.2 The Properties of Non-Propagating Solitary Wave in Water ............................................. 349
4.4.3 The Theoretical Researches of Non-Propagating Solitary Wave in Water ......................... 361
4.4.3.1 Miles and Larraza et al.’s theory ................................................................................. 361
4.4.3.2 The comparison of the experiment results with the results of the above theories ............. 362
4.4.3.3 Pang’s theoretical model of non-propagating solitary wave in water ....................... 363
4.4.3.4 Applications of the results in Pang’s theoretical model ............................................. 371
4.5 Form of a Kink Soliton on the Surface of Water and Its Features .................................. 372
4.5.1 Experimental Observation of Kink Soliton on the Surface of Water .................................. 372
4.5.2 Theoretical Description of Kink Soliton on the Surface of Water ..................................... 377
4.6 The Vortex States of Water Flows and Its Properties .................................................. 379
4.6.1 The Vortex Movements of Water Flow and Its Mechanism of Form ............................. 379
4.6.2 The Properties of Two-Dimensional Vortexes .......................... 382
References .................................................................................. 385

5. Water with Life and Life Activity .............................................. 389
5.1 An Annotation of “There is No Life without Water” .................. 390
  5.1.1 The Chain Structures of Protein and Deoxyribonucleic
       Acid Molecules ........................................................................ 390
  5.1.2 Annotation of Form of Chain Structure of DNA and
       Protein Molecules in the Process of Origin of Life .................. 392
5.2 An Explanation of “There is No Life Activity without
       Water” .................................................................................. 395
5.3 Elucidation of “There are no Bio-Cells and Its Proliferation
       without Water” ....................................................................... 400
  5.3.1 The Structures of Bio-Cell and Water ................................. 400
  5.3.2 The Properties and Functions of Intracellular Water ......... 404
  5.3.3 The Proliferation of Bio-cells Cannot Depart
       from Water .......................................................................... 406
5.4 No Blood Flow and Transport of Bio-nutritional Material in
       the Vascellum without Water .................................................. 408
  5.4.1 The Compositions of Blood and Water Biological
       Functions ............................................................................ 408
  5.4.2 The Properties of Blood Flow and Its Relationship
       with Water ........................................................................... 409
  5.4.3 Water Participates Directly in Some Biological
       Processes of the Blood Circulation ......................................... 410
5.5 Hydrophobic and Hydrophilic Effects of Biomolecules ............. 412
  5.5.1 Hydrophobic and Hydrophilic Effects of Molecules .......... 412
  5.5.2 The Properties of Hydrophobic Hydration Effect ............. 415
  5.5.3 Hydrophobic and Hydrophilic Properties of Protein
       Molecules ............................................................................ 418
  5.5.4 Hydrophobic and Hydrophilic Properties of DNA ............. 423
5.6 The Hydrations of Ions in Water in Living System ..................... 428
  5.6.1 The Hydration of Ions in Water ......................................... 428
  5.6.2 The Properties of Water Clustering Around Ions ............ 432
5.7 Hydrations of Salts and Nanocorpuscle in Water in Living
       System .................................................................................. 435
  5.7.1 The Hydration State of Salts in Biology ............................. 435
  5.7.2 The Hydration of Nanocorpuscles in Water ....................... 436
5.8 The Interaction of Electrons with Cluster of Water Molecules ........................................ 439
5.9 Water in Life Systems is a Target of Action of Millimeter Waves ........................................ 445
  5.9.1 Water Molecule's Absorption of Millimeter Wave in the Living Systems .................. 446
  5.9.2 Thermal Effects of the Millimeter Waves and Its Biological Functions ....................... 448
  5.9.3 The Other Mechanism of Thermal Effect of Millimeter Waves .................................. 452
5.10 Thermally Biological Effect of Infrared Lights is Due to Thermal Movement of Water Molecules ................................................................. 454
  5.10.1 The Mechanism of Thermally Biological Effect of Infrared Lights ......................... 455
  5.10.2 Thermally Biological Effects of Water Heating by Absorbing Infrared Light ............ 456
  5.10.3 Infrared Transmission Spectra of Fingers and Surface of Skin .............................. 460
    5.10.3.1 Infrared transmission spectrum of person's fingers ...................................... 461
    5.10.3.2 Infrared transmission spectrum of surface skin ........................................... 461
Acknowledgment .................................................................................................................. 462
References ............................................................................................................................. 463
Index ....................................................................................................................................... 471
