CONTENTS

Key-notes
1. Ian MOORE, Richard BRACHMAN: Research advancing the design of large span deep corrugated metal culverts ........................................ 9
2. Lars PETTERSSON: Development of design tools for soil steel composite bridges ................................................................. 21

Session papers
1. Andreas ANDERSSON, Håkan SUNDQUIST, Raid KAROUMI: Full Scale Tests and Structural Evaluation of Soil-Steel Flexible Culverts for High-Speed Railways ................................................................. 43
2. Esra BAYOGLU FLENER, Raid KAROUMI: Evaluation of the dynamic response of a soil steel composite railway bridge ............... 55
3. Tamás BELLA, Zoltán BRAUNMÜLLER: The (none)deformation of the biggest MP200 ellipse under high cover ............................... 65
4. Sławomir BILSKI: Selection of corrosion protection of flexible steel structures ........................................................................ 73
5. Adam CZEREPAK, Jaromir ZOUHAR: Deformation control during assembly and backfilling of a corrugated steel structure ........... 85
6. Parisa HAJI ABDULRAZAGH, Esra BAYOGLU FLENER: Numerical analysis of box-type soil-steel structure under static service loads .... 95
7. Leszek KORUSIEWICZ: Computer software for calculation internal and external forces in corrugated culverts on the basis of measured strains .................................................................................. 109
8. Leszek KORUSIEWICZ, Grzegorz CHRUSCIELSKI, Robert JASIŃSKI: Practical aspects of strains, stresses and internal forces estimation during field and laboratory tests of corrugated culverts ..................... 117
9. Leszek KORUSIEWICZ, Bartłomiej KUNECKI: Field test of a large -span soil-steel arch without stiffeners during backfilling operations ... 133
10. Karl-Gunnar LUNDSTRÖM, Sten-Erik LAGER, Lars HANSING: Relining of old steel culverts damaged BY corrosion ......................... 141
11. Czesław MACHELSKI, Michał MOŃKA: Prognosis of deformation of a soil-steel structure on steel, corrugated, flexible supports .......... 147
12. Czesław MACHELSKI, Piotr TOMALA: Stiffness of shells with concrete filled ribs in soil-steel bridge structures .......................... 157
13. Arkadiusz MADAJ, Barbara BEDNAREK: Animal passages over the A2 motorway Nowy Tomyśl - Świecko section, in Poland .......... 167
14. Arkadiusz MADAJ, Krzysztof SURZBECHER: Changes in stress level in a corrugated steel structure under long-term loads ............ 175
15. Arkadiusz MADAJ, Krzysztof STURZBECHER, Ryszard PORĘBSKI, Leszek JANUSZ: Testing of multi plate type structure under dynamic railway loads ........................................ 185
16. Arkadiusz MADAJ, Maciej WĘGRZYNOWSKI, Leszek JANUSZ: Long term observations of a 3-span highway corrugated steel box bridge on Gniezno bypass ........................................ 197
17. Jan Bernard MICHALSKI, Bernard MICHALSKI: Symmetry in soil-steel bridges .......................................................... 205
18. Hesham MOHAMMED, John B. KENNEDY: Investigation on fatigue strength of corrugated steel plates bolted lap joints under flexure ... 217
19. Lars PETTERSSON: Design of soil steel composite bridges according to the Eurocode .................................................... 231
20. Lars PETTERSSON, John LEANDER, Lars HANSING: Fatigue design of soil steel composite bridges ........................................ 237
21. Kevin WHITE, Shad SARGAND: A simplified solution for the design of slotted joint corrugated steel structural plate pipe ............ 243
22. Kevin WILLIAMS, Stephen MacKINNON, John NEWHOOK: New and innovative developments for design and installation of deep corrugated buried flexible steel structures ................................. 265
23. Adam WYSOKOWSKI, Jerzy HOWIS: Influence of results of testing on manner of constructing culverts and animals passage made as buried flexible steel structures ........................................ 275
