# Table of Contents

## Introduction

## Plenary Lecture

Methodology for advanced tool load analysis and lifetime prediction of tools  
*R. Ebner, W. Ecker, S. Marsoner, S. Eck, P. Gruber, P. Raninger, M. Krobath*

## Invited Lecture

Methodology for the design of modular high pressure die casting dies  
*Y. Quedeville, U. Vroomen, A. Bührig-Polaczej*

## Heat treatment I

Detailed investigation on the morphology of phases during Time-Temperature-Transformation on a hot-work tool steel  
*S. Ejnermark, J. Andersson*

The effects of cryogenic and stress relief treatments in the temper carbides precipitation of an AISI D2 tool steel  
*P. F. da Silva Farina, A. Bellegard Farina, C. A. Barbosa, H. Goldenstein*

Influence of lowered austenitization temperature during hardening on the tempering resistance of a modified H13 tool steel (Uddeholm Dievar)  
*M. T. Coll Ferrari, J. Andersson, M. Kvarnström*

Influence of tempering temperature on the corrosion behaviour of plastic mould steel X38CrMo16  
*C. Lerchbacher, S. Zinner, H. Leitner*

## Heat treatment II

Vacuum heat treatment of high speed steel cutting tools  
*A. Rousseau, E. Doyle, D. McCulloch*

Abnormal grain growth on high-speed steels  
*I. Schenmel, Ch. Martinschitz, H. Leitner, G. Kellezi*

Sub-zero treatment of P/M Vanadis 6 Ledeburitic tool steel  
*P. Jurčič, J. Sobotová, P. Salabová, O. Prikner, B. Šuštaršič, D. Jenko*

Investigation on heat treatment process of Cr8-type tool steel  
*Ch. Li, X. Wu, Ch. Xie, H. Wang*
Materials characterization I

Characterizing of the complex microstructure in the plastic mould tool steel Nimax by LOM, SEM and EBSD evaluation
C. Söderström, J. Andersson

Multi-functional K_{ic}-test specimen for assessment of different tool and high-speed steel properties
V. Leskovšek, B. Podgornik

Characterization of Nb-alloyed high speed steels in the as cast condition

Comparison of different standards for determining cleanliness of tool steels: a status quo of different automated image analysis-systems for the introduction of EN 10247
W. Schützenhöfer, G. Frank, J. Pühringer, T. Reisl, A. Tazreiter, H. Wörner

Materials characterization II

On the relationship of heat treatment, microstructure, mechanical properties, and thermal conductivity of tool steels
J. Wilzer, S. Weber, Ch. Escher, W. Theisen

A comparative experimental study on the use of tow hot work tool steels for high pressure die casting of aluminum alloys: High thermal conductivity HTCS® and conventional 1.2343 (AISI 11)
A. Hamasaiid, I. Vails, R. Heid, H. Eibisch

Failure investigation of tools used in LSAW pipe expansion process
J. R. Shant, R. K. Goyal, G. Chauhan, T. S. Khayat

Materials development I

Characteristics of the new developed hot work tool steel for aluminium extrusion
J. B. Bacalhau, C. A. Barbosa

A new high-performance die steel for the die forging industry
D. Bockholt, D. Caliskanoglu, P. Vetter

Special hot-work tool steels for die cast structural components of passenger cars
I. Schruff

New high performance hot work tool steel with improved physical properties
S. Gelder, G. Jesner
Production of a novel hot work tool steel by mechanical milling and spark plasma sintering
M. Pellizzari, A. Fedrizzi, F. Dies

Improvemnt of thermal conductivity of hot-work tool steels by alloy design and heat treatment
E. Meurisse, C. Ernst, W. Bleck

Materials development II

Pre-hardened tool steel with improved ductility
U. Leimalm, P. Hansson

New tool steel with very high levels of toughness for cutting of press hardened steel and other demanding applications
A. Ingebrand, I. Valls, S. Molas, I. Picas, D. Casellas

Developing cementite-free martensitic steels: a relevant route to obtain high strength-high toughness steels for tools applications
C. Bellot, D. Delagnes, P. Lamesle, D. Béchet

Development of corrosion and wear resistant metal matrix composites for use in polymer processing equipment
H. Hill, A. van Bennekom, O. Ripkens

Materials development III

The effect of nickel on precipitation of carbides in a medium-alloyed tool steel
M. Kvarnström, J. Andersson, A. Medvedeva

Effect of nickel on hardenability and tetragonality of martensite lattice in medium-alloyed tool steels
A. Medvedeva, M. Kvarnström, J. Andersson, N. Al-Zoubi, N. Skorodumova, L. Vitos

The influence of aluminium on the hardening behaviour of high-speed steels
G. Kellezi, H. Leitner

Coarsening investigations of precipitates in PM tool steel grades – an effect of nitrogen
G. Lindwall, K. Frisk, J. Andersson, A. Medvedeva, O. Sandberg, I. Siller
Processing I

Performance of PM-steel in punching of stainless steel sheets
M. Waqas Tofique, F. Bergström, B. Wadman, P. Krakmalev, J. Bergström

Influence of hard milling on the surface integrity of hot working steel
M. Stolorz, B. Behrens, A. Silipigni, C. Torriani

Processing II

A step-by-step analysis of manual polishing sequences
S. Rebeggiani, B.-G. Rosen

Aspects of machining advanced mould and die steels
J. Mayerhofer

Study on machinability of pre-hardened plastic mould steel
Y. Yang, Y. Min, Z. Zhang, Y. Wu, X. Wu

Properties I

Fatigue properties of tool steels – particular focus on very high cycle fatigue
J. Bergström, Ch. Burman, V. Kazymyrovych, J. Ekengren

Interaction between aluminizing, oxidation and thermal fatigue in aluminium die casting tool
M. Salem, P. Lamesle, G. Dour, S. Le Roux, F. Rézaï-Aria

Effect of Si on thermal fatigue of SDH3 hot work die steel
Q. Zhou, X. Wu, N. Min, Y. Min

Thermal fatigue of Nb-bearing alloys for hot rolling mill rolls
M. Boccalini Jr., P. F. da Silva Farina

Influence of temperature and loading conditions on the static and cyclic material behaviour of tool steels used for cold work applications
G. Jesner, St. Marsoner

Effect of cooling rate on microstructure and properties of a non-quenched plastic mould steel
Y. Luo, X.-Ch. Wu
Properties II

Tool wear for shear cutting of ultra high strength steels according to different tool materials and tool geometries
K. Nothhaft, M. Krinninger, M. Golle, W. Volk

Influence of tool steel microstructure on the prevailing wear mechanisms in metal powder compaction
M. Olsson, B. Högman

The characterization of the wear behaviour of different die materials and coatings for forging dies using a rotational tribometer
E. Mazlum, B. Buchmayr

Investigation of the wear behaviour of different tool steels and heat treatment conditions for the cutting of a HCT980C advanced high strength steel
R. Schneider, B. Eichinger, G. Rabler, Ch. Walch

Properties III

Investigations on die roughness of hot forming tools
B.-A. Behrens, A. Bouguecha, M. Kammler, A. Klassen

Tribology of thread forming: study of load and wear of thread forming tools according to process conditions
C. Peukei, E. Badisch, P. Immich

Identification of the velocity accommodation mechanisms in a high temperature contact
P. Lepesant, Ch. Boher, Y. Berthier, F. Rézaï-Aria

Analysis of crack propagation and crack tip opening displacements by measurements 2-D Digital Image Correlation in a hot working tool steel
M. Baccar, M. Shah, V. Velay, C. Mabru, F. Rezaï-Aria

Properties IV

Influence of size and distribution of hard phases in tool steels on the early stage of galling
P. Karlsson, A. Gåård, P. Krakhmalev, J. Bergström

Galling resistance for un-coated and coated tool steels sliding against high-strength carbon steel sheet
A. Gåård

Experimental characterisation of the behaviour of short fatigue cracks in a PM high speed tool steels
P. J. Gruber, St. Marsoner, R. Ebner, R. Pippan
The influence of cooling rate during quenching and preheating temperature on the toughness of a hot-work tool steel

H. Jesperson, Ch. Nilsson

Simulation

Coupling of experimental and computational methods to assist the development of high-nitrogen tool steels

K. Frisk, G. Lindwall, J. Andersson, A. Medvedeva, I. Siller

Tempering of tool steels – a multiscale simulation

A. Eser, A. Bezold, C. Broeckmann, E. Kozeschnik, C. Simsir

Development of a simulation aided design strategy for casting die frames

R. Schöngrundner, W. Ecker, St. Marsoner, P. Gruber, R. Ebner

Prediction of dominant failure modes of tools for machining of bevel gears

F. Klocke, M. Brumm, J. Staudt

Time-efficient and precise tool load determination for a lateral extrusion process by coupled FEM/BEM simulation

F. Schongen, F. Klocke, V. Bäcker, B. Feldhaus

Prediction of the void fraction evolution during hot rolling of plastic mould steel

J.-S. Klung, D. Helm, A. Prakash

Surface engineering I

Microstructure and properties of self-mating coatings on cold work tool steel generated by friction surfacing

St. Hanke, M. Beyer, J. dos Santos, A. Fischer

Thermal cracking and soldering on PVD coated tool steel with edges and different surface finishing

D. Ugues, M. Pellizzari, A. Pisa, R. Trotti, V. Sisti

Use of modern tool steel and surface engineering in sheet cold forming

P. Hansson, M. Liljengren

Surface Engineering II

A comparison of plasma and gaseous nitriding for tools in hot massive forming

St. Hoja, H. Klümper-Westkamp, F. Hoffmann, H.-W. Zoch

Soldering and cracking of thin PVD coatings in molten aluminum alloy

M. Lorusso, D. Ugues
Tool design

Wear protection of tools by local geometry and material optimization 613
F. Klocke, D. Heinen, F. Schongen, K. Arntz, V. Bäcker, B. Feldhaus

Tooling solutions for sheet metal forming and punching of lean duplex stainless steel 621
B. Wadmcm, E. Madsen, E. Schedin, N. Bay, F. Bergström

Optimisation of a cold roll steel grade for tandem work rolls 631
J. Gnauc, K. Eger, M. Wildau

Iron based tool materials for micro cold forming via rapid solidification 639
A. Schulz, Ch. Cui, T. Kühnle, B. Kuhfuss, E. Mouni, K. Partes, S. Twardy
