2012 IEEE International Conference on Embedded and Real-Time Computing Systems and Applications

RTCSA 2012

Table of Contents

Message from the RTCSA 2012 Conference Chairs ........................................ xi
Foreword from the CPSNA 2012 Co-Chairs .................................................. xii
RTCSA 2012 Organization ............................................................................. xiii
CPSNA 2012 Workshop Organization .......................................................... xvi

Keynote

Software Controlled Memories for Scalable Many-Core Architectures ..................1

Luis Angel D. Bathen and Nikil D. Dutt

Full Papers

Session 1: Energy Aware Scheduling and Analysis

Schedulability Analysis for Processors with Aging-Aware Autonomic Frequency Scaling .............................................................................................................11

Alejandro Masrur, Philipp Kindt, Martin Becker, Samarjit Chakraborty, Veit Kleeberger, Martin Barke, and Ulf Schlichtmann

An Optimal Real-Time Voltage and Frequency Scaling for Uniform Multiprocessors ..........................................................21

Gabriel A. Moreno and Dionisio de Niz

Real-Time Scheduling of Energy Harvesting Embedded Systems with Timed Automata .........................................................................................................31

Yasmina Abdeddaim and Damien Masson

Thermal-Constrained Energy-Aware Partitioning for Heterogeneous Multi-core Multiprocessor Real-Time Systems ..........................................................41

Shivashis Saha, Ying Lu, and Jitender S. Deogun
Session 2: Ubiquitous Computing I

Distributed IPC Using Virtual Device Driver in Monolithic Kernel .............................................................. 51
   Susmit Bagchi

Timing Analysis of Small Aircraft Transportation System (SATS) ................................................................. 58
   Albert M.K. Cheng, Homa Niktab, and Michael Walston

MinMax: A Sampling Interval Control Algorithm for Process Control Systems ............................................. 68
   Xiuming Zhu, Pei-Chi Huang, Song Han, Aloysius K. Mok, Deji Chen, and Mark Nixon

CSS: Conditional State-Based Scheduling for Networked Control Systems ...................................................... 78
   Xi Chen, Akramul Azim, Xue Liu, and Sebastian Fischmeister

Session 3: Analysis and Support of Parallel Applications

The Split-Phase Synchronisation Technique: Reducing the Pessimism in the WCET
Analysis of Parallelised Hard Real-Time Programs .......................................................................................... 88
   Mike Gerdes, Florian Kluge, Theo Ungerer, and Christine Rochange

Energy Minimizing for Parallel Real-Time Tasks Based on Level-Packing ....................................................... 98
   Huiting Xu, Fanxin Kong, and Qingxu Deng

MCFlow: A Real-Time Multi-core Aware Middleware for Dependent Task Graphs ............................................. 104
   Huang-Ming Huang, Christopher Gill, and Chenyang Lu

Supporting Soft Real-Time Parallel Applications on Multicore Processors ...................................................... 114
   Cong Liu and James H. Anderson

Session 4: Scheduling and Analysis

The Hyperbolic Schedulability Bound for Multiprocessor RM Scheduling ....................................................... 124
   Hongya Wang, Lih Chyun Shu, Wei Yin, Jie Jin, and Jiao Cao

Reducing Preemptions and Migrations in EKG ................................................................................................. 134
   Geoffrey Nelissen, Shelby Funk, and Joël Goossens

Partitioned Scheduling of Implicit-deadline Sporadic Task Systems under Multiple Resource Constraints .............. 144
   Bipasa Chattopadhyay and Sanjoy Baruah

A Parallel Algorithm for EDF-Schedulability Analysis of Multi-modal Real-Time Systems .................................. 154
   Masud Ahmed, Nathan Fisher, and Daniel Grosu
Session 5: Code and Memory Issues in Embedded Systems

Reliability-Aware Instruction Set Customization for ASIPs with Hardened Logic .................................................. 164
Unmesh D. Bordoloi, Bogdan Tanasa, Mehdi B. Tahoori, Petru Eles, Zebo Peng,
Syed Z. Shazli, and Samarjit Chakraborty

Context-Aware Speculative Prefetch for Soft Real-Time Applications ................................................................. 174
Adrian Lifa, Petru Eles, and Zebo Peng

Optimizing Data Allocation for Loops on Embedded Systems with Scratch-Pad Memory ........................................... 184
Jun Zhang, Tan Deng, Qiuyan Gao, Qingfeng Zhuge, and Edwin H.-M. Sha

An Efficient Tool-Chain for Analyzing Tradeoffs of Code Compression Schemes in Embedded Processors .............. 192
Sreejith K. Menon

Session 6: Ubiquitous Computing II

Admission Control and Channel Allocation of Multi-item Requests for Real-Time Data Broadcast ......................................... 202
Jingsong Lv, Victor C.S. Lee, Minming Li, and Enhong Chen

Tame: Time Window Scheduling of Wireless Access Points for Maximum Energy Efficiency and High Throughput .................................................. 212
Jin Ma, Seong Hoon Kim, and Daeyoung Kim

A Fault Resilient Architecture for Distributed Cyber-Physical Systems ........................................................................ 222
Fardin Abdi Taghi Abad, Marco Caccamo, and Brett Robbins

Performance Comparisons of Parallel Power Flow Solvers on GPU System ............................................................. 232
Chunhui Guo, Baochen Jiang, Hao Yuan, Zhiqiang Yang, Li Wang, and Shangping Ren

Session 7: OS Scheduling for Embedded Systems

ExSched: An External CPU Scheduler Framework for Real-Time Systems .......................................................... 240
Mikael Asberg, Thomas Nolte, Shinpei Kato, and Ragunathan Rajkumar

Improving Interactivity via VT-CFS and Framework-Assisted Task Characterization for Linux/Android Smartphones .................................................. 250
Sungiu Huh, Jonghun Yoo, and Seongsoo Hong

Time-Triggered Program Self-Monitoring .................................................................................................................. 260
Borzoo Bonakdarpour, Johnson J. Thomas, and Sebastian Fischmeister

Using Virtual CPU Migration to Solve the Lock Holder Preemption Problem in a Multicore Processor-Based Virtualization Layer for Embedded Systems .................................................. 270
Hitoshi Mitake, Tsung-Han Lin, Yuki Kinebuchi, Hiromasa Shimada, and Tatsuo Nakajima
Session 8: Resource Sharing
Replica-Request Priority Donation: A Real-Time Progress Mechanism for Global Locking Protocols
Bryan C. Ward, Glenn A. Elliott, and James H. Anderson

Resource Sharing under Multiprocessor Semi-partitioned Scheduling
Sara Afshar, Farhang Nemati, and Thomas Nolte

Memory-Aware Scheduling of Multicore Task Sets for Real-Time Systems
Stanley Bak, Gang Yao, Rodolfo Pellizzoni, and Marco Caccamo

Shared-Page Management for Improving the Temporal Isolation of Memory Reservations in Resource Kernels
Hyoseung Kim and Ragunathan Rajkumar

Session 9: Energy Management and Applications
Energy Budget Management for Energy Harvesting Embedded Systems
Hessam Kooti, Nga Dang, Deepak Mishra, and Eli Bozorgzadeh

Resource Allocation of Security-Critical Tasks with Statistically Guaranteed Energy Constraint
Wei Jiang, Ke Jiang, and Yue Ma

SAFCM: A Security-Aware Feedback Control Mechanism for Distributed Real-Time Embedded Systems
Yue Ma, Wei Jiang, Nan Sang, and Paul Pop

Motion Object and Regional Detection Method Using Block-Based Background Difference Video Frames
Jiwoong Bang, Daewon Kim, and Hyeonsang Eom

Session 10: Real-Time Scheduling
Fixed-Priority Schedulability of Arbitrary-Deadline Sporadic Tasks upon Periodic Resources
Farhana Dewan and Nathan Fisher

Regularity-Based Partitioning of Uniform Resources in Real-Time Systems
Yu Li, Albert M.K. Cheng, and Aloysius K. Mok

A Method for Improving Delay-Sensitive Accuracy in Real-Time Embedded Systems
Mitra Nasri and Mehdi Kargahi
Work-in-Progress Papers

DuLASP: A Workload-Aware Flash Translation Layer Exploiting both Temporal and Spatial Localities ................................................................................................................................. 388
  Chung-Tai ChangCheng, Hsin-Hung Chen, and Da-Wei Chang

A Multi-hop Low Cost Time Synchronization Algorithm for Wireless Sensor Network in Bridge Health Diagnosis System ................................................................. 392
  Haitao Xiao, Cheng Lu, and Harutoshi Ogai

A New Compositional Scheduling Framework for Power-Aware Real-Time Systems ............................................................................................................................. 396
  Guy Martin Tchamgoue, Kyong Hoon Kim, and Yong-Kee Jun

Optimizing the Deployment of Distributed Real-Time Embedded Applications .......................................................................................................................... 400
  Asma Mehioui, Sara Tucci-Piergiovanni, Jean-Philippe Babau, and Laurent Lemarchand

Load Balancing Aware Real-Time Task Partitioning in Multicore Systems ......................................................................................................................... 404
  Jaeyeon Kang and Daniel G. Waddington

Automatic Invariant Generation for Monitoring OS Kernel Integrity ................................................................................................................................. 408
  Hiromasa Shimada and Tatsuo Nakajima

Separated Linux Process Logging Mechanism for Embedded Systems ............................................................................................................................. 411
  Praween Amontamavut, Yuki Nakagawa, and Eiichi Hayakawa

The Fixed Priority Scheduling Problem for Energy Harvesting Real-Time Systems ................................................................................................................ 415
  Younès Chandarli, Yasmina Abedddaim, and Damien Masson

An OpenCL Runtime Library for Embedded Multi-Core Accelerator ................................................................................................................................. 419
  Ryuichi Sakamoto, Mikiko Sato, Yusuke Koizumi, Hideharu Amano, and Mitaro Namiki

Enhancement of Real-Time Processing by Cooperation of RTM and TECS ........................................................................................................................... 423
  Naofumi Yawata, Azumi Takuya, and Nobuhiko Nishio

Period Fitting for Rate-monotonic Scheduling Using a Circular Similarity Measure ..................................................................................................... 427
  Dirk Müller

Second Workshop on Cyber-Physical Systems, Networks, and Applications (CPSNA'12)

Session 1: Time-Sensitive Cyber-Physical Systems

Fault-Tolerant Scheduling in Hierarchical Real-Time Scheduling Framework .................................................................................................................. 431
  Jongssoo Hyun and Kyong Hoon Kim

Supporting Low-Latency CPS Using GPUs and Direct I/O Schemes ............................................................................................................................... 437
  Jason Aumiller, Scott Brandt, Shinpei Kato, and Nikolaus Rath

Schedulability Analysis of Real-Time Pipelines with Sporadic Transactions ............................................................................................................ 443
  Pham Diem Trang, Kanghee Kim, and Chang-Gun Lee
Session 2: Applications

Privacy-Aware Communication for Smartphones Using Vibration .................................................................447
Inhwan Hwang, Jungchan Cho, and Songhwai Oh

A Configurable, Extensible Implementation of Inter-Partition Communication
for Integrated Modular Avionics .........................................................................................................................453
Sang-Hun Lee, Sanghyun Han, and Hyun-Wook Jin

Session 3: Short Papers

Vibration-Based Surface Recognition for Smartphones .......................................................................................459
Jungchan Cho, Inhwan Hwang, and Songhwai Oh

Observing Thermal Characteristics of Energy-Aware Mobile Devices .........................................................465
Wonwoo Jung, Dongwon Kim, and Hojung Cha

Double Circular Caching Scheme for DRAM/PRAM Hybrid Cache ...............................................................469
Jen-Wei Hsieh and Yuan-Hung Kuan

Co-analysis of SysML and Simulink Models for Cyber-Physical Systems Design .........................................473
Shin Nakajima, Satoru Furukawa, and Yoshikazu Ueda

Adaptive Selection of Multiple Paths for Delay-Sensitive Networked Control Systems .................................479
Jaemin Kim, Wooyeol Choi, Hyuk Lim, and Kyung-Joon Park

Game Based Approach to Learn Martial Arts for Beginners ............................................................................482
Connsynn Chye and Tatsuo Nakajima

Author Index .......................................................................................................................................................486
