Contents

Part I: Mechanical Conservation Principles, Variational Calculus and Engineering Applications from the 17th to the 20th Century

The Origins of Mechanical Conservation Principles and Variational Calculus in the 17th Century	3
<i>Erwin Stein</i>	
Principles of Least Action and of Least Constraint	23
<i>Ekkehard Ramm</i>	
Lagrange’s “Récherches sur la libration de la lune”– From the Principle of Least Action to Lagrange’s Principle	45
<i>Hartmut Bremer</i>	
The Development of Analytical Mechanics by Euler, Lagrange and Hamilton – From a Student’s Point of View ...	61
<i>Maximilian Gerstner, Patrick R. Schmitt, Paul Steinmann</i>	
Heun and Hamel – Representatives of Mechanics around 1900	73
<i>Hartmut Bremer</i>	
The Machine of Bohnenberger	81
<i>Jörg F. Wagner, Andor Trierenberg</i>	
On the Historical Development of Human Walking Dynamics	101
<i>Werner Schiehlen</i>	

**Part II: Material Theories of Solid Continua and Solutions
of Engineering Problems**

On the History of Material Theory – A Critical Review	119
<i>Albrecht Bertram</i>	
Some Remarks on the History of Plasticity – Heinrich Hencky, a Pioneer of the Early Years	133
<i>Otto T. Bruhns</i>	
Prandtl-Tomlinson Model: A Simple Model Which Made History	153
<i>Valentin L. Popov, J.A.T. Gray</i>	
A Historical View on Shakedown Theory	169
<i>Dieter Weichert, Alan Ponter</i>	
Some Remarks on the History of Fracture Mechanics	195
<i>Dietmar Gross</i>	
Porous Media in the Light of History	211
<i>Wolfgang Ehlers</i>	
Parameter Identification in Continuum Mechanics: From Hand-Fitting to Stochastic Modelling	229
<i>Rolf Mahnken</i>	
Historical Development of the Knowledge of Shock and Blast Waves	249
<i>Torsten Döge, Norbert Gebbeken</i>	
The Historical Development of the Strength of Ships	267
<i>Eike Lehmann</i>	
Part III: Theories, Engineering Solutions and Applications in Fluid Dynamics	
The Development of Fluid Mechanics from Archimedes to Stokes and Reynolds	299
<i>Oskar Mahrenholtz</i>	
The Millennium-Problem of Fluid Mechanics – The Solution of the Navier-Stokes Equations	317
<i>Egon Krause</i>	
On Non-uniqueness Issues Associated with Fröhlich’s Solution for Boussinesq’s Concentrated Force Problem for an Isotropic Elastic Halfspace	343
<i>A. Patrick S. Selvadurai</i>	

Essential Contributions of Austria to Fluid Dynamics Prior to the End of World War II 355
Helmut Sockel

Part IV: Numerical Methods in Solid Mechanics from Engineering Intuition and Variational Calculus

From Newton’s Principia via Lord Rayleigh’s Theory of Sound to Finite Elements 385
Lothar Gaul

History of the Finite Element Method – Mathematics Meets Mechanics – Part I: Engineering Developments 399
Erwin Stein

History of the Finite Element Method – Mathematics Meets Mechanics – Part II: Mathematical Foundation of Primal FEM for Elastic Deformations, Error Analysis and Adaptivity 443
Erwin Stein
