Developments in Parallel, Distributed, Grid and Cloud Computing for Engineering

Edited by B.H.V. Topping and P. Iványi
## Contents

**Preface** iii

1 Computational Fluid Dynamics Applied to the Aerodynamic Design of a Land Based Supersonic Vehicle 1
   O. Hassan, B. Evans, J.G. Araya and K. Morgan

2 Challenges to be Overcome for Engineering Software to Run Efficiently on Petascale Machines 23
   C. Moulinec, D.R. Emerson, Y. Fournier and P. Vezolle

3 Today's Large-Scale Science depends on Network Data Movement based on Twenty Five Years of Technology Development 41
   W.E. Johnston, E. Dart and B. Tierney

4 Parallel Computing in Selected Civil Engineering Problems 67

5 GPU Based Simulation of Physical Systems Characterized by Mobile Discrete Interactions 95
   C.C. Chabalko and B. Balachandran

6 HPC CFD Simulations Based on Kinetic Methods Using Multi- and Many-Core Systems 125
   M. Krafczyk, S. Uphoff, M. Schnherr, M. Geier, K. Kucher and M. Stiebler

7 Solving Partial Differential Algebraic Equations and Reactive Transport Models 151
   J. Erhel, S. Sabit and C. de Dieuleveult

8 A Parallel Incompressible Navier-Stokes Solver: Implementation Issues 171
   G. Houzeaux, H. Owen, B. Eguzkitza, C. Samaniego, R. de la Cruz, H. Calmet, M. Vázquez and M. Ávila

9 Reducing Subtask Dispersion in Parallel Systems 203
   W.J. Knottenbelt and I. Tsimashenka

10 Asynchronous Schwarz Methods for Peta and Exascale Computing 229
    F. Magoulès
11 Deflation and Augmentation Techniques in Krylov Subspace Methods for the Solution of Linear Systems
O. Coulaud, L. Giraud, P. Ramet and X. Vasseur

249

12 Stopping Criteria for Parallel Asynchronous Iterations for Fixed Point Methods
J.C. Miellou and P. Spiteri
