NUMERICAL ANALYSIS AND
APPLIED MATHEMATICS
ICNAAM 2011

International Conference on Numerical Analysis and Applied Mathematics

Halkidiki, Greece 19 – 25 September 2011

Volume C

EDITOR
Theodore E. Simos
European Society of Computational Methods in Sciences and Engineering (ESCMSE), European Academy of Sciences and Arts; King Saud University, Saudi Arabia; University of Peloponnese, Greece

CO-EDITORS
George Psihoyios
European Society of Computational Methods in Sciences and Engineering (ESCMSE); Fellow of the IMA, United Kingdom

Ch. Tsitouras
Technological Educational Institute of Chalkis, Greece

Zacharias Anastassi
School of Pedagogical & Technological Education (ASPETE), Athens, Greece

All papers have been peer reviewed.

SPONSORING ORGANIZATIONS
European Society of Computational Methods in Sciences and Engineering
The R. M. Santilli Foundation
Preface: Symposium on imaging and inverse problems
A. Carpio and M. L. Rapún 1423

The DORT method for small dielectric inhomogeneities in 3D
C. Burkard and K. Ramdani 1425

Characterization of biological tissues using microwaves
Natalia Irishina and Diego Alvarez 1429

xxx
Variational methods for inverse conductivity problems
A. Carpio and M. L. Rapún

Linear sampling and reciprocity gap methods for a fluid-solid interaction problem in the near field
Peter Monk and Virginia Selgas

Preface: Symposium on models in nano and biomaterials
L. L. Bonilla

Spatially confined bloch oscillations in semiconductor superlattices
M. Carretero, M. Álvaro, and L. L. Bonilla

A thin cantilever beam in a flow
Yossi Farjoun and David G. Schaeffer

Clay-based nanocomposites possibilities and limitations
Dimitris Papoulis

Influence of rugosity on biofilm growth
D. Rodriguez, B. Einarsson, and A. Carpio

Mathematical modelling of bacterial populations in bio-remediation processes
Ioanna A. Vasiliadou, Dimitris V. Vayenas, and Constantinos V. Chrysikopoulos

Preface: Symposium on distribution theory, estimation, and inference
Carlos A. Coelho

The effect of non-normality on the power of randomization tests: A simulation study using normal mixtures
T. A. Oliveira, F Branco, A. Oliveira, and C. E. Minder

Asymptotic distribution of an extreme value index estimator based on the scaled log-spacings
Frederico Caeiro and M. I. Gomes

On the exact, asymptotic and near-exact distributions for the likelihood ratio statistics to test equality of several exponential distributions
Carlos A. Coelho and Filipe J. Marques

Resampling methodologies and the estimation of parameters of rare events
Dora P. Gomes and Manuela Neves

The multi-sample block-matrix sphericity test
Filipe J. Marques and Carlos A. Coelho

Estimating the parameters of the Johnson's $S_B$ distribution using an approach of method of moments
Ayana Mateus and Margarida Tomé
Multivariate application domains for the Delta method
   João T. Mexia, Célia Nunes, and Manuela M. Oliveira 1486

Preface: Symposium on state of the art of modeling and numerical analysis for wind turbines
   Alexandru Dumitrache and Florin Frunzulica 1490

Aerodynamic characteristics of wing profiles for wind generators
   Alexandra Colidiuc, Bogdan Suatean, and Stelian Galetuse 1494

Semi-empirical modelling of broadband noise for aerofoils
   Michele De Gennaro and Helmut Kuehnelt 1498

Active circulation control for horizontal axis wind turbine
   Alexandru Dumitrache, Horia Dumitrescu, and Octavian Preotu 1503

Active and passive lift force augmentation techniques on wind turbines
   F. Fruu zulică, Hă Dumitrescu, R. Mahu, and O. Preotu 1507

Wake study methods of wind turbines
   Bogdan Suatean, Alexandra Colidiuc, Stelian Galetuse, and Florin Frunzulica 1511

Methods for improve the performance of the turbomachines using the flow control
   Ion Malael, H. Dumitrescu, and Alexandru Dumitrache 1515

3D CFD modeling and simulation of NREL phase VI rotor
   R. Mahu, F. Popescu, F. Frunzulică, and Alexandru Dumitrache 1520

Preface: Symposium on discrete and continuum modeling of dislocation systems
   Stefan Sandfeld and Michael Zaiser 1524

Modelling thin film microbending: a comparative study of three different approaches
   Katerina E. Aifantis, Nikos Nikitas, and Michael Zaiser 1526

Critical behavior in dislocation systems: Power-law relaxation below the yield stress
   Péter D. Ispánovity 1530

Towards Frank-Read sources in the continuum dislocation dynamics theory
   Stefan Sandfeld and Thomas Hochrainer 1531

Dislocation microstructure evolution in cyclically twisted micrometer-sized metallic samples: A discrete dislocation dynamics analysis
   J. Senger, D. Weygand, O. Kraft, and P. Gumbsch 1535

Collective dislocation dynamics and avalanches during fatigue of aluminum
   W. B. Rhouma, S. Deschanel, and J. Weiss 1536
Some limitations of dislocation walls as models for plastic boundary layers
Michael Zaiser and Istvan Groma

Preface: Symposium on statistical modeling and data analysis
Teresa A. Oliveira

The impact of outliers on the power of the randomization test for two independent groups
F. Branco, T. A. Oliveira, A. Oliveira, and C. E. Minder

Hierarchical linear models: Review and applications
V. Valente and T. A. Oliveira

Diagnostic performance of visual screening tests in the elderly
Carla C. Lança and Elisabete Carolino

Dimensionality problem in discrete discriminant analysis
Ana S. Ferreira

Testing the significance of the linear regression coefficients: Exploring some estimators for the autocorrelation function
M. R. Ramos and Marco Costa

Application of change-point detection to a structural component of water quality variables
A. M. Gonçalves and Marco Costa

Using udometric network data to estimate an environmental covariate
A. M. Gonçalves and Marco Costa

Preface: Symposium on the numerical solution of differential equations and their applications
Zacharias A. Anastassi

On wavelet matrix compression for differential equations
Dana Černá and Václav Finěk

Numerical solutions of 3D poroelastic wave equations with exact nonreflecting boundary conditions
Wensheng Zhang and Li Tong

Metaprogramming applied to numerical problems
Mario Mulansky and Karsten Ahnert

Odeint—solving ordinary differential equations in C++
Karsten Ahnert and Mario Mulansky

xxxiii
Stochastic Runge-Kutta methods with deterministic high order for ordinary differential equations
Yoshio Komori and Evelyn Buckwar

Efficient exponential fitting algorithm with two fitting parameters for oscillation problems
Turgut Ozis and Utku Erdogan

A fitted Runge-Kutta-Nyström method with six stages for the integration of the two-body problem
A. A. Kosti, Z. A. Anastassi, and T. E. Simos

Some symmetric linear four-step methods for the numerical solution of oscillatory initial value problems
Z. A. Anastassi and T. E. Simos

Preface: Symposium on meshfree methods: Applications and theory
Edward J. Kansa and Alexender I. Fedoseyev

Adaptive wavelet method for fourth-order elliptic problems
Dana Černáň and Václav Finěk

Time dependent four dimensional Burgers' equation solutions with meshless radial basis functions
Edward J. Kansa

STATISTICAL LINEAR INFERENCE

A fundamental partition in models with commutative orthogonal block structure
Francisco Carvalho, João T. Mexia, Ricardo Covas, and Célia Fernandes

Interaction in balanced cross nested designs
Paulo Ramos, João T. Mexia, Francisco Carvalho, and Ricardo Covas

Confidence intervals for mixed log-normal models
Miguel Fonseca, Thomas Mathew, João T. Mexia, and Roman Zmyślony

Models with stair nesting
Célia Fernandes, João T. Mexia, Paulo Ramos, and Francisco Carvalho

Inference with inducer pivot variables, an application to the one-way ANOVA
Ricardo Covas, João T. Mexia, Célia Fernandes, and Paulo Ramos

GENERAL SESSION
Complex overdetermined infinite linear systems
Béla Finta

Global well-posedness of Cauchy problem for 1D generalized Boussinesq equations at both low initial energy level and critical initial energy level
Jiang Xiaoli, Ding Yunhua, Liu Yacheng, and Xu Runzhang

The impact of synchronization on the group size
Iva Dostálková and Libor Dostálek

Preconditioning of the singular domain integral equation method for transverse electric scattering on high-contrast inhomogeneous cylinders
Grigorias P. Zouros and Neil V. Budko

The airflow stagnation zone effect of convective heat transfer on adjacent indoor wall
Lubos Hach and Yasuo Katoh

Power-law formalism in gene regulatory networks
Valeriya Tafintseva, Anna Machina, and Arkadi Ponossov

Numerical realization of a shell model for impurity spreading in plasmas
M. Z. Tokar and M. Koltunov

Well-balanced central schemes for the Saint-Venant systems
R. Touma and S. Khankan

The numerical analysis on Flange vertical buckling in hybrid steel girders
Shigeru Shimizu, Yukiko Yamasaki, and Nobunao Tanaka

Some notes on quasi-power-increasing sequences
W. T. Sulaiman

Construction of high order accuracy decomposition scheme for an abstract hyperbolic equation with the Lipschitz continuous operator on the basis of rational splitting of the cosine-operator function
J. Rogava and M. Tsiklauri

On the validity of the Fick's law for multi-component diffusion
George D. Verros

On the use of Lambert W function for modeling of quantum resonances
Jiří Horáček and Tomáš Ledvinka

A parallel Jacobi-Davidson algorithm with block FSAI preconditioning
M. Ferronato, C. Janna, G. Pini, and G. Gambolati

Crystal melt modeling and simulation with magnetic fields
Sara Heft and Günter Bärwolf
Topological invariants and CW complexes of Cartesian product and hexagonal tiling spaces
Juan Garcia Escudero

The first integral method for solving the nonlinear telephone equation
H. Rouhparvar

Numerical investigation of intermediate thermal compartment of SOFC system
Pasi Miettinen

Polynomial size formulations for the distance and capacity constrained vehicle routing problem
Imdat Kara and Tusun Derya

Higher-order long-wave short-wave interaction equations in a generalized elastic solid
Irma Hacinliyan

Comparison of stream-vorticity and velocity-vorticity formulation of Navier-Stokes equations using multidomain BEM
Matjaž Ramšak and Leopold Škerget

On generalized contractions in probabilistic metric spaces
Ioan Goleţ and Ciprian Hedrea

Functional inequalities for incomplete q-gamma function
W. T. Sulaiman

On some new q-integral inequalities
W. T. Sulaiman

A gradient-related algorithm for solving large scale, spatially explicit, welfare models with transportation
Michiel A. Keyzer and Cornelia F.A. van Wesenbeeck

The influence of power and velocity of the heat source on temperature distribution in plate welding problems
Ivana Ivanović and Aleksandar Sedmak

Some bounds for Čebyšev and Ostrowski type inequalities
W. T. Sulaiman

A conjugate gradient algorithm for the non-stationary identification of material characteristics
J. Vala

xxxix
A sufficient stability condition for linear stochastic Markovian systems
Efraim Shmerling 1940

A matrix model for reliability of a cold-standby system with identical repairable elements
Peyman Farahpour, Kamrouz Mahshid, Mani Sharifi, and Aidin Palizban 1943

Nonlinear coupled problems solved by $hp$-FEM
Pavel Kus, Václav Kotlan, Pavel Karban, and Ivo Doležel 1948

A new bipolar surfaces representation: Approximation on 3D meshes
Majdi Jribi and Faouzi Ghorbel 1952

Splitting domain generalized Laguerre spectral method with characteristics and its applications
Zhang Xiao-yong and Sui J. Hua 1957

Second order generalized Laguerre function approximation and its applications
Zhang Xiao-yong and Sui J. Hua 1961

Spherical harmonic-generalized Laguerre function mixed spectral method
Zhang Xiao-yong and Sui J. Hua 1965

A new model for redundancy allocation problem in series systems with repairable components by genetic algorithm
Mani Sharifi, Reza Rezaei Moayed, and Sara Haratizadeh 1969

Fractional order and dynamic simulation of a system involving an elastic wide plate

A diagonally implicit symplectic Runge-Kutta method with minimum phase-lag
Z. Kalogiratou, Th. Monovasilis, and T. E. Simos 1977

A trigonometrically fitted symplectic Runge-Kutta-Nyström method

Selecting variables in regression models. A new approach to the prediction of time series of $SO_2$
Marta Sestelo, Nora M. Villanueva, and Javier Roca-Pardiñas 1984

Forecasting Portugal's wind power production by a fuzzy-PCA approach
Lio Gonçalves and Paulo Salgado 1988

Sliding PCA fuzzy clustering algorithm
Paulo Salgado, Lio Gonçalves, and Getúlio Igrejas 1992
Efficient numerical models for electro-mechanical analysis
Lotfi Abdelhakim

Uncertainty quantification of a 1-D beam deflection due to stochastic parameters
M. A. El-Beltagy, O. H. Galal, and M. I. Wafa

Periodic extreme Gibbs measures with memory length 2 of Vannimenus model
Hasan Akin, Nasir Ganikhodjaev, Selman Uğuz, and Seyit Temir

Characterization of 2D cellular automata with Moore neighborhood over ternary fields
Hasan Akin, Selman Uğuz, and Irfan Siap

Inelastic buckling simulation of steel braces through explicit dynamic analyses
Mehrdad Lotfollahi, Mohammad Mehdi Alinia, and Ertugrul Taciroglu

A validated finite element procedure for buckling simulation of diagonally braced moment resisting frames
Mehrdad Lotfollahi, Mohammad Mehdi Alinia, and Ertugrul Taciroglu

The (G'/G)-expansion method for solving nonlinear Klein-Gordon equations
E. M. E. Zayed and M. A. S. EL-Malky

Heterogeneous domain decomposition of surface and porous media flow
Heiko Berninger, Ralf Kornhuber, and Oliver Sander

Boundary conditions for constrained systems of evolution equations in numerical relativity
Tomáš Ledvinka

A modified RKN with infinity order of phase-lag derivative for the numerical integration of ODEs with oscillating solutions
D. F. Papadopoulos and T.E. Simos

A new modified RKN Method by Using the Phase-lag Properties
D. F. Papadopoulos and T. E. Simos

A social capital index
Enrique González-Aranguena, Anna Khmelnitskaya, Conrado Manuel, and Mónica del Pozo

On quartic transformational high dimensional model representation
Erdoğan Şen

Simulation of shock wave structure in a gas with excited rotational and vibrational energy levels
F. G. Tcheremissine
