Volume 5

Numerical Investigation of Hypersonic Curved Shock Two-Dimensional Inlet Designed on the Wall Constant Mach Number Gradient ................................................................. 3743
Lin Zhang, Kun Yuan Zhang, Lei Wang, Yuan Liu

Spacecraft Conceptual Design for Returning Entire Near-Earth Asteroids ................................................................. 3752
John Brophy, Steven Olsson

Experimental Investigation of a Direct-Drive Hall Thruster and Solar Array System at Power Levels up to 10 kW ............................. 3768
John Snyder, John Brophy, Richard Hofer, Dan Goebel, Ira Katz

A Misunderstood/Overlooked/Traditional/Useful Newly Discovered Force ................................................................. 3792
Hsien-Lu Huang, Hui-Lien Peng Huang

Preliminary Study of a Novel Gas Turbine Combustor Concept based on Hydrogen Synthesis from Kerosene Reforming ................................................................. 3806
Bhupendra Khandelwal, Kshiliz Agarwal, Adam Karaktar, Vishal Sethi, Riti Singh

Steady Operation of an FRC Thruster on Martian Atmosphere and Liquid Water Propellants ................................................................. 3815
David Kirtley, Anthony Pancotti, John Stough, Christopher Phil

PRECISE - Development of a MEMS-based Monopropellant Micro Chemical Propulsion System ................................................. 3832
Markus Gauer, Dimitri Telischkin, Ulrich Gotzig, Yann Battoneau, Hakan Johansson, Mikhail Ivanov, Phil Palmer, Remco Wiegerink

A Comparison of Candidate Seal Designs for Future Docking Systems ................................................................. 3841
Patrick Dunlap Jr., Bruce Steinetz

High Current Lanthanum Hexaboride Hollow Cathode for 20-to-100 kW Class Hall Thrusters ................................................................. 3857
Dan Goebel, Emily Chu

Development and Testing of High Current Hollow Cathodes for High Power Hall Thrusters ................................................................. 3868
Hani Kamhawi, Jonathan Van Noord

Insert Temperature Measurements of a 180A Hollow Cathode for the HiPER Project ................................................................. 3881
Michele Coletti, Stephen Gabriël

A T5 Hollow Cathode Thruster: Experimental Results and Modelling ................................................................. 3898
Daniele Frollani, Michele Coletti, Stephen Gabriël

Exploration of RF-Controlled High Current Density Hollow Cathode Concepts ................................................................. 3909
Matthew Plasek, Benjamin Jorns, Edgar Chowei, James Polk

The Effect of Unsteady Entropy on Combustion Instability ................................................................. 3926
Eric Jacob, Gary Flandro, Tina M. Rice
Experimental Study of Low Frequency Plasma for Liquid Oxygen and Methane Ignition ........................................... 4368
Taiichi Nagata, John Culberston, Jose Torres, Eric Basnard

Low Ambient Pressure Injection and Consequences on Ignition of Liquid Rocket Engines ........................................ 4373
Chiara Manfletti

Laser Ignition of a Research 200N RCS LOx/GH2 and LOx/GCH4 Engine ............................................................... 4390
Chiara Manfletti

Development and Testing of a Methane/Oxygen Catalytic Microtube Ignition System for Rocket Propulsion ............ 4410
Matthew Deans, Steven Schneider

Valveless Detonation Concepts for Space Exploration .......................................................................................... 4429
Brandon Kan, Stephen Heister

Plain-Orifice Gelled Propellant Flow Characteristics with Rheological Hysteresis .................................................. 4449
C. Yoon, S. Heister, O. Campanella

Universal Subscale Fixed-Nozzle Burning Rate Analysis Tool ......................................................................... 4458
Matthew Hinkelman, Jessica Goldin

Experimental Study of Erosive and Dynamic Burning in Polybutadiene Based Composite Propellants ......................... 4467
Matthew Ronnenmuier, Stephen Heister

Optimization of Civil Turbomachinery with Evolutionary Algorithms ............................................................... 4482
Lorenzo Casalino, Dario Pastrone

Off-Design Performances of a Gas Turbine Engine with Heat Recovery and Intercooling ..................................... 4493
Roberto Andriani, Fausto Gamma, Umberto Ghezzi

Large-Scale Transient Loading of a Three Stream Variable Cycle Engine ........................................................... 4502
Michael Corbett

Highlights from a Mach 4 Experimental Demonstration of Inlet Mode Transition for Turbine Based Combined Cycle Hyperersonic Propulsion .......................................................... 4524
Lancert Foster, John Saunders Jr., Bobby Sanders, Lois Weir

A Framework for Simulating Turbine-based Combined Cycle Inlet Mode-transition Control ............................... 4539
Dzu Le, Daniel Vrnak, John Slater, Emil Hessel

Shock Train Position Control in an Axisymmetric Scramjet Combustor Flowpath ................................................. 4550
Jeffrey Donhar

High-Speed Schlieren Analysis of Buzz in a Relaxed-Compression Supersonic Inlet .................................................. 4558
Thomas Herges, Gregory Elliott, J. Dutton

Quasi One-Dimensional Unsteady Modeling of External Compression Supersonic Inlets ........................................ 4574
George Kopasakis, Joseph Connolly, Jonathan Kranz

Quantification of Convection Velocity and Dominant Scale of Large-Scale Structures by High-Speed Schlieren Imaging ........................................................................................................... 4586
Toshinori Kouchi, Goro Masuya

A Turbine Based Combined Cycle Engine Inlet Model and Mode Transition Simulation Based on HITECC Tool .... 4597
Jeffrey Csank, Thomas Stueber

Real-time Unstart Prediction and Detection of Hypersonic Inlet Based on Recursive Fourier Transform ................. 4609
Juntao Chang, Lei Wang, Daren Yu, Wen Bao

Design of Hypersonic Inward Turning Inlets with Controllable Mach Number Distribution ................................. 4632
Yongzhou Li, Kun Yuan Zhang, Xiangjun Nan

A Systems Approach to Developing an Affordable Space Ground Transportation Architecture using a Commonality Approach ........................................................................................................... 4640
Jerry Garcia, Carey M. McCleskey, Timothy R. Bolio, Russel E. Rhodes, John W. Robinson

Approach to an Affordable and Productive Space Transportation System ........................................................... 4664
Carey McCleskey, Russel E. Rhodes, Roger A. Lepsch, Edward M. Henderson, John Robinson
