ECCOMAS Thematic Conference on Multibody Dynamics 2013

Book of Abstracts

Edited by Zdravko Terze
Contents

Aerospace Applications

Modeling MGB-Fuselage joint on helicopter with an energetic approach "multi-Bond graph"

Benjamin Boudon, François Malburet, Jean-Claude Carmona ........................................... 3

Regular and Chaotic Dynamics of a Spacecraft with Internal Mass Redistribution Moving in Elliptic Orbit

Alexander Burov, Ivan Kosenko .............................................................................................. 5

Multi-Body Approach to the Simulation of Particular Drop Test for an Aircraft Landing Gear

Romeo Di Leo, Angelo De Fenza, Marco Barile, Domenico Moccia, Leonardo Lecce .................. 7

Smooth/Non-Smooth Dynamics Co-Simulation of Helicopter Rotor Sailing

Matteo Fancello, Pierangelo Masarati, Marco Morandini .................................................... 9

Bifurcation Analysis of a Nose Landing Gear with a Single Uplock/Downlock Mechanism

James Andrew Cannicott Knowles, Bernd Krauskopf, Mark Lowenberg, Simon Neild ................ 11

Active Vibration Control of Satellite Panels

Maria Augusta Neto, Jorge Ambrósio, Ana Amaro, Luis Roseiro ........................................... 13

Slewing control of spacecraft with unsymmetrical flexible appendages & fluid sloshing, using wave-based control

William Joseph O’Connor, Hossein Habibi ............................................................................. 15

Finite element simulation of high velocity impact analysis on composite structure parts

Zoran Pelagić, Martin Dudinsky, Milan Zmindak ................................................................... 17

Multi-scale Dynamics, Control, and Simulation of Granular Spacecraft

Marco B. Quadrelli, Scott Basinger, Grover Swartzlander ...................................................... 19

Application Substructure Model Synthesis Method on Modeling of a Space Camera

Dewei Sun, Qirong Tang, Chao Wang, Hong Lu, Jiangao Jin .................................................. 21

Development of Tether Space Mobility Device

Shoichiro Takehara, Takahiro Nishizawa, Masaya Kawarada, Kazunori Hase, Yoshiaki Terumichi 23

Dynamic Simulation of Helicopter Airborne Maneuvers with Numerical Integration Scheme in Lie-Group Setting

Zdravko Terze, Milan Vrdoljak, Dario Zlatar ............................................................................ 25

Biomechanics

Development of a Multibody Model of the Lower Limbs to Evaluate the Effect of Ankle-foot Orthoses on Human Gait
Configuration-dependent performance indicators for the analysis of foot impact in running gait

AMP-Foot 2.0 Prosthesis Dynamic Behavior, Preliminary Computational Multibody Dynamics Simulation Results

Dynamic testing of artificial hip joint stability under physiological-like conditions

Strategies for Model Reduction in Adaptive DCA-based Multibody Modeling of Biopolymers

Muscle paths in biomechanical multibody simulations

A Multibody Model for the Shoulder Reverse Prosthesis

Computing Musculotendon Paths and their Velocities Across Multiple Moving Surfaces Using Jacobi Fields

Design and experimental validation of a haptic steering interface for the control input of a bicycle simulator

Impact models for walking and running systems - angular moment conservation versus varying geometric constraints

Contact and Constraints

Evaluation of rigid and flexible body contact for high resolution gear simulation

An augmented Lagrangian and reduced index formulation for the analysis of multibody systems with impacts

A mortar algorithm combined with an Augmented Lagrangian approach for treatment of frictional contact problems

A Massively Parallel Fast Marching Method Applied to Non-Linearly Elastodynamic Contact Problems

Efficient Simulation of Cylindrical Gears in Approximate Line Contact

On the Dynamic Response of Mechanical Systems with Clearance Joints: Influence of Contact Force Model

Contact Analysis for Different Viscoelastic Contact Force Models

Comparison of index-3, index-2 and index-1 DAEs solvers for nonsmooth multibody systems with unilateral or bilateral constraints
Mounia Haddouni, Vincent Acary, Jean-Daniel Beley ............................. 65
Dynamic Simulation of Coil Contact in Valve Springs by using a Semi-Smooth Newton Method
Josef Haslinger, Günter Offner, Martin Sopouch ................................. 67
Minimal Coordinates Formulation of Contact Dynamics
Abhinandan Jain ................................................................. 69
Dynamic Simulation and Control for Robotic Manipulation of Planar Objects with Rolling
Liazid Kerha, Belkacem Bounab .................................................. 71
A Differential Variational Inequality Approach for Modeling Frictional Contact-Impact between Flexible Bodies
Naresh Khude, Dan Negrut ......................................................... 73
Modelling of Large Scale Granular Systems using the Discrete Element Method and the Non-Smooth Contact Dynamics Method: A Comparison
Jan Kleinert, Martin Obermayr, Matthias Balzer ................................ 75
Optimal Control of Standing Jump Movements
Michael Koch, Sigrid Leyendecker ............................................... 77
Parametric excitation of non-smooth systems: the unilaterally constrained Hill's equation
Remco I. Leine ................................................................. 79
Non-contact measurement of a disk spinning on a table
Daolin Ma, Caishan Liu, Hongjian Zhang ...................................... 81
Effect of Energy Dissipation on the Dynamics of Chain Drives
Cândida Pereira Malca, Jorge Ambrósio, Amulcar Lopes Ramalho ....... 83
An Object-Oriented Environment for Simulation of Wheel-Rail Contact in Roller Coasters
Christian Malessa, Andrés Kecskeméthy ....................................... 85
Derivation and Investigation of Conditions on the Consistent Application of Newton's Law to Constrained Mechanical Systems
Sotirios Natsiavas, Elias Paraskevopoulos .................................. 87
Consideration of failure mechanisms in bolted connections
Detlef H.-J. F. Neuenhaus, Christian Kammel, Achim Geßler ............. 89
Multibody motion in an implicitly constrained director format and links via explicit constraints
Martin Bjerre Nielsen, Steen Krenk ........................................... 91
Unilateral Contact Kinematics
Friedrich Pfeiffer .............................................................. 93
An algorithm for the Characterization of Constraint Forces.
Javier Ros, Javier Gil, Aitor Plaza, Xabier Iriarte ............................ 95
Modeling flexible roller ball bearings in multibody dynamics
Anne Schwenkenberg, Jochen Damerau, Hartmut Hetzler, Wolfgang Seemann .... 97
Dynamics of a Rigid Body Rolling without Sliding Supported at Two Points on a Fixed Surface
Nicolae-Doru Stanescu, Dinel Popa ........................................... 99
The Singularities in a 3D rigid body bouncing on a vibrated plate
Jiao Wang, Caishan Liu ......................................................... 101

Control Modelling and Applications
Application of the Transfer Matrix Method to Control Problems
Dieter Bestle, Xiaoting Rui ............................................. 105
Improving a Workpiece Dominated Turning Process Using an Adaptronic Tool Holder and Model Predictive Control
Peter Eberhard, Achim Fischer ...................................... 107
Adjoint-Based Optimal Control Design for a Cart Pendulum System with Dry Friction
Domenico Guida, Fabio Nilvetti, Carmine Maria Pappalardo .............. 109
Payload motion control for various crane types using mechanical waves
Hossein Habibi, William J. O'Connor ................................ 111
Modeling of flexible non-linear dynamic links in Nano-Positioning Motion Systems
Meinko Hoogerkamp, Rob Waiboer, Ronald Aarts .......................... 113
Operational Space Inertia for Robots with Internal Loops
Abhinandan Jain .......................................................... 115
Usage of MBS-Models of Vehicles in the Tasks of Active Suspension Control
Dmitry Miroshnichenko, Eugene Gromov, Andrey Andreev .................. 117
Control of the Underactuated Mechanical Systems by Harmonics
Zdenek Neusser, Michael Valasek .................................... 119
A Numerical Approach to Multiobjective Optimal Control of Multibody Dynamics
Maik Ringkamp, Sigrid Leyendecker, Sina Ober-Blöbaum .................. 121
Parameter Study on the Dimension Reduction Method of ANCF Model for Controller Design of Flexible Beam
Yoshiki Sugawara, Koki Takeda, Shinya Otsuki, Nobuyuki Kobayashi .......... 123
Simulation of a non-smooth dynamical model of the piano key
Anders Thorin, Xavier Boutillon, José Lozada, Xavier Merthiot, Alain Micaelli .......... 125
Optimization of control parameters for multibody mechatronic product with adaptronic approach
Vasilije Vasic, Mihailo P. Lazarevic .................................. 127
Specifying the Force for Wave-based Motion Control of Flexible Systems
Ming Zhu, William J. O'Connor ...................................... 129

Efficient Simulation and Real-Time Applications .......................... 131
Tree Harvester Truck Simulator based on Real-Time Multibody Simulation
Mohamad Ezral Bin Baharudin, Asko Rouvinen, Pasi Korkealaakso, Aki Mikkola .......... 133
Soft material modeling for muscle separation process control and dynamic trajectory generation
Nabil Essahbi, Belhassen-Chedli Bougardou, Grigore Gogu ..................... 135
Evaluating the Performance of Three Standard Multibody Dynamics Formulations
Daniel Montrallo Flickinger, Jeff Trinkle .............................. 137
Multibody system coupling with discrete element approximation of deformable and heating bodies using parallel processing
Victor V. Getmanskiy, Timur D. Ismailov, Alexander S. Gorobtsov, Andrey E. Andreev .......... 139
Efficient Contact Analysis between Mass Spring-Damper System and Many Particles by Using GPGPU
Chul Woong Jun, Jeong Hyun Sohn .................................... 141
Large Deformation Formulation for the Flexible Divide-and-Conquer Algorithm
Imad Khan, Kurt Anderson ............................................. 143
A Real-time Multibody Dynamics Model for Unmanned Robot Vehicle based on the Subsystem Synthesis Method
Myoung-Ho Kim, Hee Chan Kang, Hong-Sun Yoon, Sung-Soo Kim ........................................... 145

Real-time human in the loop MBS simulation in the Fraunhofer Robot-Based Driving Simulator
Michael Kleer, Andrey Gizatullin, Klaus Drefiller, Steffen Müller ........................................... 147

A direct-iterative splitting method for real-time simulation of rigid multibody systems with frictional contacts
Claude Lacoursiere, Mattias Linde, Niklas Melin ................................................................. 149

Chrono::Terrain - Off-Road Vehicle Dynamics Simulation with a Compaction Based Deformable Terrain Model
Justin Madsen, Andrew Seidl, Dan Negrut ................................................................. 151

Comparison of Model Order Reduction Methods for Automotive Systems
Ramin Masoudi, Thomas Uchida, John McPhee ................................................................. 153

A Generalized, Optimal Complexity, Parallel Algorithm For Modeling Nonholonomic Constraints in Multi-rigid Body System Dynamics
Rudranarayan Mukherjee, Pawel Malczyk ................................................................. 155

Use of Sub-System Global Modal Parameterization Models in Extended Kalman Filtering for Online Coupled State/Force Estimation.
Frank Naets, Roland Pastorino, Javier Cuadrado, Wim Desmet ........................................... 157

Use of Rosenbrock Methods for Hardware-in-the-Loop Simulations of Multibody Models
William Crego Prescott ................................................................. 159

Regularization via Overdetermined Formulations and Numerical Simulation of Multibody Systems Modeled with Modelica
Altmeeyer Randolf, Andreas Steinbrecher ................................................................. 161

A novel time varying parametric model order reduction scheme with focus on dynamic stress recovery
Tommaso Tamarozzi, Gert H.K. Heirman, Wim Desmet ........................................... 163

Waveform-Newton algorithm for the cosimulation of multibody systems coupled by constraints
Pawel Tomulik, Janusz Fraczek ................................................................. 165

A comparison of Algorithms for Sparse Matrix Factoring and Variable Reordering aimed at Real-time Multibody Dynamic Simulation
Jose-Luis Torres-Moreno, Jose-Luis Blanco-Claraco, Javier López-Martínez, Antonio Giménez-Fernández ........................................... 167

Flexible Multibody Dynamics

Application of the rigid finite element method to modelling of risers
Iwona Adamiec-Wójcik, Lucyna Brzozowska ................................................................. 171

Experimental Validation of Flexible Multibody Dynamics Beam Formulations
Olivier A. Bauchau, Shilei Han, Aki Mikkola ................................................................. 173

Wave-induced effects on the power generated by floating offshore wind turbines: a systematic comparative study
Ilmas Andrea Bayati, Edoardo Sabbioni ................................................................. 175

A Comparison of DAE Integrators in the Context of Benchmark Problems for Flexible Multibody Dynamics
Peter Betsch, Christian Becker, Marlon Franke, Yinping Yang ........................................... 177

Vibroactivity Analysis of High Speed Rotating Machine on Flexible Foundation
Asynchronous variational Lie group integration for geometrically exact beam dynamics
Francois Demoures, Francois Gay-Balmaz, Thomas Leitz, Sigrid Leyendecker, Sina Ober-Blöbaum, Tudor Ratiu

On the Use of the Rotation Parameters in the Large Displacement Analysis of Beams
Jieyu Ding, Michael Wallin, Cheng Wei, Antonio M. Recuero, Ahmed A. Shabana

A Cosserat Beam Finite Element Based on the ANC Discretization
Simon Raphael Eugster, Christian Hesch, Peter Betsch, Christoph Glocker

Dynamic modeling of a multibody slack mooring system
Brian C. Fabien

Simulation of Moving Loads in Elastic Multibody Systems with Parametric Model Reduction Techniques
Michael Fischer, Peter Eberhard

Coupling Isogeometric Shells with Multibody Systems
Anmol Goyal, Bernd Simeon

A Novel Bernoulli-Euler Beam Finite Element in Absolute Nodal Coordinate Formulation
Peter G. Gruber, Karin Nachbagauer, Yury Vetyukov, Johannes Gerstmayr

ANCF Planar Beam in the Dynamics of Fibres Interacting with Pulley
Michal Hajzman, Pavel Polach, Jaroslav Václavek, Zbyněk Šíka

Calculation Efficiency of Beam Elements with Algebraic Constraints
Kensuke Hara, Masahiro Watanabe

Comparison of a Helix Beam Element to Conventional Finite Element in Static and Dynamics Responses of a Coil Spring
Jang Jin-Seok, Kim Hyun-Woo, Yoo Wan-Suk

Dominant Factors on Cable Unwinding from a Spool Package
Kun-Woo Kim, Wan-Suk Yoo, Jae-Wook Lee, Hyung-Ryul Kim

Vibration control of a flexible fork of a solar cell manipulator for accurate positioning in large vertical motion
Wook Hyeon Kim, Tae Won Park, Dong Il Park

Numerical experiments for viscoelastic Cosserat rods with Kelvin-Voigt damping
Holger Lang, Sigrid Leyendecker, Joachim Linn

Finite Element Analysis of Large Deformation Flexible Beam with Warping Effect Included
Pengfei Li, Shuai Shi

Generalized Maxwell type viscoelasticity for geometrically exact Cosserat rod and shell models
Joachim Linn

Preloaded Initial State Evaluation of Flexible Multibody Systems
Norbert Lorenz, Günter Offner, Alessandro Colla

Higher order plate elements based on the absolute nodal coordinate formulation
Marko Kalervo Matikainen, Aki Mikkola

Nonlinear incompressible material models for beam elements in absolute nodal coordinate formulation
Grzegorz Orzechowski, Janusz Fraczek, Krzysztof Arczewski

Model parameters influence of a simple mechanical system with fibre and pulley with respect to experimental measurements
Formulations and Numerical Methods

Modeling Flexible Multibody Systems by Moving Dirichlet Boundary Conditions
Robert Altmann .............................................. 243

Rank-deficient body mass matrices in a recursive multibody formalism
Martin Arnold .................................................. 245

Numerical Determination of a sufficient Local Approximation Order of Loop-Closure Conditions for Overconstrained Mechanisms
René Bartkowiak, Christoph Woernle .......................... 247

Advanced Beam Theory for Multibody Dynamics
Olivier A. Bauchau, Shilei Han ................................. 249

Application of a gyrostatic rigid body formulation in the context of a direct transcription method for optimal control in multibody dynamics
Christian Becker, Peter Betsch, Ralf Siebert .............. 251

Dynamics of flexible spatial beams: the velocity-based approach
Peter Češarek, Dejan Zupan .................................... 253

Computing time investigations of variational multirate integrators
Tobias Gail, Sigrid Leyendecker, Sina Ober-Blöbaum .... 255
Local Linearization Method in the Integration of Multibody Equations
Gibin Gil, Ricardo G. Sanfelice, Parviz E. Nikravesh .............................................. 257

Reaction Efforts Associated with Non-Holonomic and Rheonomic Constraints in Index-3 Augmented Lagrangian Formulations
Francisco González, Daniel Dopico, Javier Cuadrado, József Kövecses .......................... 259

A derivation of a local integration error estimate and development of an automatic time step control algorithm for the generalized-alpha scheme for mechatronic systems
Gert H. K. Heirman, William C. Prescott, Wim Desmet ............................................. 261

Reduced Discrete Variational Multi-body Mechanics
Marin Kobilarov .............................................................................................................. 263

Parallelization of Multibody System Dynamics by Additional Dynamics
Ladislav Mraz, Michael Valasek ...................................................................................... 265

Implementation of a Geometric Constraint Regularization for Multibody System Models
Andreas Müller ................................................................................................................ 267

A Beam Element based on the Absolute Nodal Coordinate Formulation applied to the Numerical Investigation of a Square Frame
Karin Nachbagauer, Georg Zenz, Johannes Gerstmayr, Ming-Hsiang Shih .................... 269

A Novel Study of Rigid Body Kinematics and Dynamics based on a Non-Riemannian Geometry
Elias Paraskevopoulos, Sotirios Natsiavas .................................................................... 271

A Multibody Dynamics Formulation for Open Loop Systems Based on Maggi-Kane Equations
Ettore Pennestrì, Valerio Rossi, Pietro Salvini, Pier Paolo Valentini .............................. 273

A New Form of the Transfer Matrix Method of Multibody System
Xiaoting Rui, Dieter Bestle, Jianshu Zhang ..................................................................... 275

Computational Kinematics of Multibody Systems: The Advantages of a Topological Method Based on its Kinematic Structure
Mariano Saura, Javier Cuadrado, Daniel Dopico, Ana I. Celdrán ..................................... 277

Discussion of the Gear-Gupta-Leimkuhler method for multibody systems including clearance and impacts
Thorsten Schindler, Svenja Schoeder .............................................................................. 279

Angular Momentum Conserving Integration Scheme for Multibody System Dynamics in Lie-Group Setting
Zdravko Terze, Andreas Müller, Dario Zlatar .................................................................. 281

Alternative approaches to the incorporation of control constraints in multibody dynamics
Yinping Yang, Peter Betsch .............................................................................................. 283

Riccati Transfer Matrix Method for Eigenvalue Problem of the System with Antisymmetric Boundaries
Jianshu Zhang, Xiaoting Rui, Guoping Wang, Fufeng Yang ............................................ 285

On integration of rotational quaternions from angular velocities
Eva Zupan, Miran Saje, Dejan Zupan ............................................................................. 287

Mechatronics and Robotics ......................................................................................... 289

A Methodology to Characterize Critical Falling Configurations for a Humanoid Robot
Giovanna Beninati, Matteo Leonetti, Nikos G. Tsagarakis, Darwin G. Caldwell ............. 291

Robust trajectory planning for flexible robots
Paolo Boscardiol, Alessandro Casparetto, Renato Vidoni .............................................. 293
Elastodynamics Analysis of Icaro: a PKM for Pure Translational Motion
Alessandro Cammarata, Giovanna Adele Naselli, Rosario Sinatra

CPG tuning using sensory feedback for walking applications
Christophe Charlet, Enrico Filippi, Olivier Verlinden

On Modeling and Simulation of 6 Degrees of Freedom Stewart Platform Mechanism Using Multibody Dynamics Approach
Ayman El-Badawy, Khaled Mohamed Rashad Mohamed Nabih Mohamed Youssef

The Modeling of a Mobile Robot and Its Feedback Control via Pole-Placement
Yann G. Garneau, Jorge Angeles, Alessio Salerno

Analysis, Optimization, and Testing of Planetary Exploration Rovers: Challenges in Multibody System Modelling
Bahareh Ghotbi, Francisco Gonzalez, Ali Azimi, William Bird, József Kövecses, Jorge Angeles, Raja Mukherji

Dynamics of Multibody Systems with nonlinear Control Subsystems
Alexander S. Gorobtsov, Eugeny N. Ryzhon, Anna S. Churzina

A Hybrid Control Method for Stabilizing of Walking Robot on Irregular Surface Using Plantar Pressure Sensors
Dmytro Gumennuy, Mikhail Tkach, Alexey Chkalov

Dynamics of Serial-chain Multibody Systems Using Equimomental systems of Point-masses
Vinay Gupta, S. K. Saha, Himanshu Chaudhary

Positioning control of the multibody robot’s jump
Sergey Fedorovich Jatsun, Lyudmila Yurievna Volkova

Performance Optimization of Haptic Multibody Systems
László L. Kovács, Sara Shayan Amin, József Kövecses

Inverse dynamic method for control motion of walking robot with account of programm forces for redundant constraints case
Alexander S. Gorobtsov, Alexander Mokhov, Alexander Oleynikov, Andrey Andreev

Dynamic modeling and control of spatial flexible manipulators for trajectory tracking application
Rajesh Kumar Moolam, Francesco Braghin, Federico Vicentini

Dynamic behavior model of a machining robot and stability prediction
Said Ghazanfar Mousavi, Vincent Gagnol, Belhassen-Chedli Bouzgarrou, Pascal Ray

Dynamic Behavior of Inverted Pendulum Vehicle and Driver during Deceleration
Chihiro Nakagawa, Shunsuke Arakawa, Atsuiko Shintani, Tomohiro Ito

Vibration confinement in lightly damped multibody systems: an hybrid active-passive approach
Dario Richiedei, Alberto Trevisani

Environment and Objects Detection Using E-puck Robot
Ehsan Sharaftan Ardakani, Mehdi Tale Masouleh, Ali Ghaffari

Development of Snake Robot based on Multibody Dynamics Simulation
Hocheol Shin, Jeong Joo Kwon, Bong Cheol Seo, Tae Won Kim, Sungh Seoul Kim

Hybrid robotic system featuring a combination of a continuum robot and a rigid robotic arm: static and differential kinematic modeling
Gabriel Smoljic, Gianni Borges, Bert Willaert, Jos Vander Sloten

Design and Application of A Piezoelectric Device Producing Vibration and Power
Yang Ting, Chin-Chih Yeh, Chih-Hsuan Yu, Hsiang-Hung Huang, Chia-An Wei
Joint-Space Dynamics Algorithm for Tree Structure Space Manipulators by Using Inertia Mapping Matrix

*Mingming Wang, Ulrich Walter* .......................................................... 333

Optimal Design of a Pair of Cooperating Robots by Kinetic Analysis of Stair Climbing States

*Abraham Weiss, Gideon Avigad* ...................................................... 335

Modal Measurements and Model Corrections of a Large Stroke Compliant Mechanism

*W. Wijma, S.E. Boer, R.G.K.M. Aarts, D.M. Brouwer, W.B.J. Hakvoort* .......... 337

A feasibility study of the local calibration method

*Marek Wojtyra* .................................................................................. 339

Tracking Control of a Balancing Robot

*Tobias Zaiczek, Matthias Franke* ...................................................... 341

**Multiphysics and Coupled Problems in MBS** 343

Development of Solenoid-Latch Mechanism System Model Using Electromagnetic field-Multibody Dynamics Coupled Analysis of Spring Operated Mechanism for Circuit Breaker

*Byungtae Bae, Sungho Lee, Jaeyeol Kim, Jooeoon Park, Jinho Kim* ................. 345

Bifurcation Analysis of Self-excited Thermoacoustic Oscillations in Damper-equipped Combustion Chambers

*Michael Baumann, Remco I. Leine, Nicolas Noiray, Bruno Schuermans* .......... 347

Design of towed vehicle for polluting monitoring

*Alessandro Cammarata, Michele Lacagnina, Andrea Litrico, Giovanna Adele Naselli, Rosario Sinatra* .............................................................. 349

VAWT starting performance simulation with generator model coupling within OpenFOAM

*Elia Daniele, Dubravko Matijašević, Luigi Iszo* ...................................... 351

Application of Viscous Vortex Domains Method for Solving Flow-Structure Problems

*Yaroslav Alexeевич Dynnikov, Galina Yakovlevna Dynnikova* ...................... 353

Towards a detail drive train model with Matlab and Aeroelastic Wind Turbine Code

*Juan Felipe Gallego-Calderon, John Michael Hansen, Braulio Barahona, Kim Branner, Nicolaos Antonio Cutululis* ................................................. 355

Validation of Coupled Multibody Dynamic and Seakeeping Simulations of Offshore Dredging Equipment

*Stephan David Arjan Hannot, Johannes Gijsbert Los, Albert Cornelis Leendert de Krijger, Bram Adrianus Waltherus van Spaendonk* ............................................. 357

A mortar based approach for Fluid-Structure Interaction with flexible multibodies

*Christian Hesch, Peter Betsch* ....................................................... 359

An Approach for the Spatial Coupling of the Multibody System Chain in a Partitioned Algorithm

*Dubravko Matijašević, Zdravko Terze* ................................................ 361

A Lagrangian-Lagrangian framework for the simulation of fluid/rigid-body interaction

*Arman Pazouki, Dan Negrut* .......................................................... 363

Solver Coupling between Multibody and Electro-Magnetic Systems

*Robert Schnoll, Bernhard Schweizer, Christian Simonidis, Octavian Craciun, Veronica Biagini* ................................................................. 365

Flow simulation in blood vessels with fluid-structure interaction

*Markus Schörgenhuber, Johannes Gerstmayer* ....................................... 367

Cases of Integrability in Transcendental Functions in 3D Dynamics of a Rigid Body Interacting With a Medium
A New Technique for Stronger Coupling between Multibody System and Nonlinear Finite Element Solvers in Co-simulation Environments
Tariq Sinokrot, Philippe Jetteur, Hunor Erdelyi, Frederic Cugnon, William Prescott

Numerical modeling of docking operation in MAAT project
Dean Vucinic, Anna Suñol, Steve Vanlanduit, Andrey Aksenov, Tatyana Markova, Igor Moskalov

Numerical method for interaction of loose floating bodies
Kalman Žiha

Optimization and Sensitivity Analysis

An Alternative Method for the Optimum Dynamic Balancing of Planar Mechanisms
Mario Acevedo, Eduardo Haro, Felix Martinez

Sensitivity analysis of dynamic three-dimensional multibody systems: Theory and software implementation
Joydeep Banerjee, John J. McPhee

Multidisciplinary Design Optimization of Wind Turbines by a Multibody/Cross-Sectional/FEM Integrated Approach
Carlo L. Bottasso, Filippo Campagnola, Alessandro Croce, Federico Gualdoni

Efficient response optimization of realistic vehicle models using an automatically-differentiated semi-recursive formulation
Alfonso Callejo, Javier García de Jalón, Pablo Luque, Daniel Álvarez

Effect Analysis of Latch Length on the Performance of Spring Operating Mechanism for a Gas Insulated Circuit Breaker
Gyuseok Choi, Jeonghyun Sohn, Hyunwoo Kim, Wansuk Yoo, Byungtae Bae, Jaeyeol Kim, Jinho Kim

Reliability-based Design Optimization applying Polynomial Chaos Expansion: Theory and Applications
Alberto Clarich, Mariapia Marchi, Enrico Rigoni, Rosario Russo

Optimization of Kinematic Sensitivity and Workspace of Planar Parallel Mechanisms
Morteza Daneshmand, Mohammad Hossein Saadatzi, Mehdi Tale Masouleh, Ehsan Sharafian Ardakani, Mohammad Bagher Menhaj

Index-1 and Index-3 adjoint DAE equations for the sensitivity analysis of multibody systems
Daniel Dopico, Yitao Zhu, Adrian Sandu, Corina Sandu

Optimizing the Dynamics of Mechanical Systems Using Particle-Swarm-Optimizers and Meta-Models
Markus Filippi, Heinz Ulbrich

Gradient Based Optimization of Flexible Multibody Systems Using the Absolute Nodal Coordinate Formulation
Alexander Held, Robert Seifried

Control of Harmonically Driven Resonating Compliant Structures using Local Structural Modifications
Hugo Jacobus Peters, Johannes F.L. Goosen, Fred van Keulen

Automated Synthesis and Optimization of Planar Linkage Mechanisms
Martin Alejo Pucheta, Alberto Cardona

Adjoint second order ODE for the computation of first order sensitivities in multibody dynamics
Yitao Zhu, Daniel Dopico, Corina Sandu, Adrian Sandu

Railroad Vehicle Dynamics
Co-Simulation of Multibody and Finite Element Codes for Wheel-Rail Interaction

Pedro Antunes, João Pombo, Jorge Ambrósio, Manuel Pereira, Tiago Almeida, Hugo Magalhães 407

A railway HIL system for the safety on board subsystem testing activities: controller robustness analysis

Roberto Conti, Benedetto Allotta, Franco Cavaliere, Enrico Meli, Luca Pugi, Alessandro Ridolfi 409

Numerical simulation of dynamic phenomena occurring in deformable rail vehicle drive systems

Slawomir Duda 411

Dynamic Modeling of Magnetic Suspension and Propulsion for a Track Transportation System

Hyung-Suk Han, Kijung Kim, Jongwoo Han, Changhyun Kim, Doyoung Park 413

Development of an Innovative Weigh in Motion System for Railway Vehicles

Mirko Ignesti, Alice Innocenti, Lorenzo Marini, Enrico Meli, Luca Pugi, Andrea Rindi 415

Development and Validation of a Wear Model for the Prediction of Wheel and Rail Profile Evolution on Complex Railway Nets

Mirko Ignesti, Alice Innocenti, Lorenzo Marini, Enrico Meli, Andrea Rindi 417

Fault detection of multibody systems applied to railway vehicles

Mathias Jesusek, Katrin Ellermann 419

Optimization of a bogie primary suspension damping to reduce wear in railway operations

Seyed Milad Mousavi Bideleh, Viktor Berbyuk 421

Development of Air Suspension Model with Leveling and Differential Pressure Valves and its Experimental Validation for Use in Railroad Vehicle Dynamics Simulation

Toshihisa Nakajima, Yoshiyuki Shinokawa, Masaaki Mizuno, Hiroyuki Sugiyama 423

Discrete Element Models for Railroad Ballast Degradation

Robert Seifried, Christian Ergenzinger, Peter Eberhard 425

Semi-Active Control of Skyhook for Ride Comfort of a Railway Vehicle

Kyung Seok Sim, Tae Won Park, Nam Ho Chung 427

Development of Pantograph Model using Multibody Dynamics and Bench Test Evaluations

Hironobu Sunami, Yoshiaki Terumichi, Masahito Adachi, Takeshi Narita 429

Software Development and Education 431

HOTINT – A Multibody Dynamics Simulation System for Education, Research and Application

Johannes Gerstmayr, Daniel Reischl 433

Chrono: A Parallel Multi-Physics Library for Rigid-Body, Flexible-Body, and Fluid Dynamics

Toby D. Heyn, Hammad Mazhar, Arman Pazouki, Dan Melanz, Andrew Seidl, Aaron Bartholomew, Luning Fang, Alessandro Tasora, Eftychios Sifakis, Dan Negrut 435

Computer-aided evaluation of posture ergonomics by means of low-cost markerless motion capture system

Ettore Pennestri', Alfredo Patrizi, Valentini Pier Paolo, Rughi Diego, Nappi Francesco 437

Development of a virtual laboratory in the framework of the education of theoretical mechanics taught for undergraduate engineering students

David Wattiaux, Olivier Verlinden 439

RPI-MATLAB-Simulator

Jedediah Freeman Williams, Ying Lu, Sarah Niebe, Jeff C. Trinkle 441

MBD Education in PNU, Korea

Wan Suk Yoo 443
Vehicle Dynamics and Simulation

Modelling and Control of an Autonomous Underwater Vehicle for Mobile Manipulation

Benedetto Alotta, Roberto Conti, Riccardo Costanzi, Francesca Giardi, Enrico Meli, Alessandro Ridolfi

Structural MBD tire models: Evolving from Spindle Load to Deformation Measurements

Manfred Bäcker, Axel Gallrein

Comparison of Different Coordinates Formulation for Efficient Modeling of a Vehicle Suspension System

Mariano Carpinelli, Marco Gubitosa, Domenico Mundo, Wim Desmet

Sample based Reliability Design Method for a Multibody System having Arbitrary Distributed Parameters

Chan Kyu Choi, Hong Hee Yoo

Dynamical Behavior of Trains Excited by a Non-Gaussian Vector Valued Random Fields

Funfschilling Christine, Perrin Guillaume, Soize Christian, Duhamel Denis

A multibody model to assess the effect of automotive motor in-wheel configuration on vehicle stability and comfort

Javier Cuadrado, David Vilela, Inaki Iglesias, Adrian Martín, Alberto Peña

Use of an implicit non-linear FEA multi-model solver for the dynamic simulation of an automotive vehicle with meshed tires.

Frédéric Cugnon, Philippe Jetteur, Frédéric Pascon, Tom van Eekelen

A low cost dynamometer wheel for validating multibody vehicle models

Maria Dolores Gutierrez Lopez, Javier García de Jalón

Reduction of Vehicle Suspension Models to Single-degree-of-freedom Equivalent Kinematic Joints

Andrew Hall, Chad Schmitke, Thomas Uchida, John McPhee

Dynamic Property of the Triangle Rotary Engine Mechanism

Chiu-Fan Hsieh

Symbolic Calculation of the Base Inertial Parameters of a Low Mobility Mechanism

Xabier Iriarte, Javier Ros, Francisco Valero, Vicente Mata, Jokin Aginaga

Vibration reduction of a six-wheeled vehicle with rotating arm suspensions

Samuel Jung, Wan-suk Yoo

Tracked vehicle dynamics modelling issues

Slawomir Kciuk, Arkadiusz Meżyk, Gabriel Mura

Dynamic Responses of the Flexible Guideway Induced by Moving Maglev Vehicles

Ki-Jung Kim, Hyung-Suk Han, Jong-Min Lee, Seok-Jo Yang

Modeling Of Traffic Stream In Urban Environment As A Multibody Chain With Breakable Weak Springs

Aleksandar Kostikj, Milan Kjosevski, Ljupcho Kocarev

Analysis of the Dynamic Interaction between Catenary and Pantograph and Experimental Verification in High Speed over 300km/h

Jin Hee Lee, Tae Won Park

A novel 3-dof parallel mechanism employed in a vehicle suspension for the Improvement of Handling Performance

Fernando Malvezzi, Tarcisio Antonio Hess Coelho

Comparison on multi-body vehicle model and lumped parameter model
On the use of geometrically exact shells for dynamic tire simulation
  Michael Roller, Peter Betsch, Axel Gallrein, Joachim Linn ................. 483

Analysis and Design of Active Pedal for Improving Fuel Economy using Multibody Analysis of Pedal and Foot Interaction
  YoungKyu Shin, Namgyu Han, JunYoung Park, SungWoo Kwon, TaeOh Tak ........ 485

Development of Steering HILS System with Multibody Kinematic Model of Front Suspension
  Masashi Tsushima, Taichi Shiiba .............................................. 487

Evaluation of the Effects of Vehicle Model Complexity on Subjective Driving Perception in a Driving Simulator
  Michael Unterreiner, Dieter Schramm, Udo Ossendorth .......................... 489

Special Session on Benchmark Problems in Multibody Dynamics 491

Benchmark Problems for Beam Models in Flexible Multibody Dynamics
  Olivier A. Bauchau ................................................................. 493

A Library of Computational Benchmark Problems for the Multibody Dynamics Community
  Ramin Masoudi, Thomas Uchida, David Vilela, Alberto Luaces, Javier Cuadrado, John McPhee 495

History of Benchmark Problems in Multibody Dynamics
  Werner Schiehlen ................................................................. 497

Benchmark Problems for Computational Efficiency of Rigid Multibody System Dynamics
  Michael Valasek, Zbyněk Sika .................................................... 499

Author Index 501
