Content

Isolated Systems in Russia: Development and Operation	1
Calculation Reliability: Topological Method	5
The Regulation of Energy Consumption of Industrial Enterprises.....	9
Assessment of the Influence of Power Consumers on the Distortion of the Voltage at the PCC	12
Parametric identification of traction substations' power transformers	16
Improving the Efficiency of Industrial Enterprises	21
Mathematical model of high speed deformation of a metal pipe by electric explosion including the effect of the end-face section of electric explosive wires	25
Interval computational method for modes of electrical power systems in phase coordinates.....	29
Monitoring traction transformer ageing.....	33
Improvement of Electromagnetic Environment in Traction Power Supply Systems	39
Intelligent Traction Power Supply System	44
Electric Energy Storage Systems versus Autonomous Power System: Modeling, Simulations and Economic Issues.....	48
Energy Management System with an Electric Vehicle Integration	55
IEC Interfaces for Smart Energy Systems	61
PMU in Smart Distribution Grids: Placement and Test Measurements	66
Model of an HVDC Transmission System: Scaling Problems	71
Autonomous Fuel Cell System	75
Mobility System and Charging Strategies	79
