WIRE BREAKS AND FAILURE ANALYSIS
Wire Breaks And Failure Analysis

Preface 1
Types of Wire Breaks 2
Causes of Breaks 3
Prevention of Breaks 4
Wire Break Classification 5
Possible Source of Inclusions 6

I Process Related Problems 7
- Annealing Problems: Arcing 8
  • Molten Ends
- Cut Ends 9
- Mechanical Damage 10-11
- Scriber Marks 12
- Welding Related Wire Breaks 13
  • Hot Welds
  • Cold Welds 14
- Wire Drawing Problems 15
  • Bulging
  • Chatter 16
  • Crowsfeet 17
  • Cups, Cones, and Cuppy Wire 18
  • Drawing Slivers 19
  • Misalignment 20
  • Packed or Plugged Die (compacted fines) 21
  • Shaving 22
  • Surface Tearing and Galling 23
  • Tensiles 24
  • Torsion Breaks 25

II Rod Related Problems 26
- Casting Problems 27
  • High Oxygen
  • Icicles / Slag 28
  • Macroporosity 29-30
  • Off Center Macroporosity 31
- Hot Rolling Problems 32-33
  • Slivers / Seams
  • Roll Protrusions and Overfills 34
  • Oxides and Hot Cracks 35

III Inclusions 36
- Inclusion Absent 37
• Inclusion Present
  • Magnetic Inclusions 38-39
  • Non-Magnetic Inclusions 40

IV Look-Alikes 41-43

V Field Service Related Defects 44
  • Corrosion 45
  • Fatigue 46
  • Hydrogen Embrittlement 47
  • Over Heating 48
  • Oxidation 49
