First International Conference of Oil, Gas, Petrochemical and Power Plant

16 July 2012
Tehran, Iran
Table of Contents

1. A new approach in estimation of Archie's parameters: application of genetic algorithm in case studies permian glrito and permian clearfork reservoirs

7. Accuracy of Sachdeva's choke model for prediction gas and liquid rate of Iranian gas condensate wells

15. Modifying GMA equation of state for accurate calculation of natural gas and LNG thermophysical properties at low and high pressure

24. Neural Network Based Particle Swarm Optimization for Prediction of Water Breakthrough Time

31. Numerical Analysis of Hydraulic Fracture Operation in Oil Reservoir Using ABAQUS Software

38. Numerical prediction of heat transfer by natural convection in a square cavity differentially heated and partitioned

43. Numerical study of nanofluid flow and heat transfer in microchannels

47. On the catalytic conversion of methanol to light olefins over metal-incorporated sapo-34 molecular sieves

55. Optimization of power train using Genetic, Particle Swarm and SQP/I Algorithms

63. Overall Sherwood number estimation in pulsed packed liquid-liquid extraction column

67. Overview on porous carbon-supported catalysts for synthetic Fuel production and environmental applications

73. Persian Gulf and Corrosion

78. Adsorption of dyes and heavy metal ions by chitosan composites: A review

86. Petroleum storage management using multi-criteria decision making approach

93. Phenol removal from wastewater by modified clay

101. Planning an optimum system for offshore facility corrosion Management: salman offshore platform corrosion management Implementation case study result
Streamline simulation for well pattern improving in an iranian oil reservoir

Studing of created structural changes in hydroxyapatite indirect Magnesium and Carbonate addition

Study of Different Type Of muds And Their Applications in Deep Wells (Gachsaran Field)

Study on basic methods of spent caustic treatment

Study on carbon dioxide hydrogenation reactor for methanol production, simulation and modification

Survey of Asphaltene Precipitation due to Different Production Schemes: An Experimental study

A survey on different scaling equation models to predict amount of asphaltene precipitation

Technical evaluation of secondary oil recovery methods, a case study on one of the iranian hphalt carbonate reservoirs

The Adaptive Estimated Formation Pressure During Drilling Operations, in Drilling Wells, and an Exploration of Steps towards Efficient Drilling

The determination of chemical oxygen demand in spent caustic waste by closed-tube digestion procedure using potentiometric determination

An experimental study of permeability reduction Associated with the invasion of oil droplets and solid Particles in porous media during oily-water injection

The effect of interfacial tension on recovery factor for a selected malaysian oilfield

The Effect of Production Flow Rate and Gas Injection on Gas Condensate in Fracture Reservoir in Iran

The impact of sparkling mechanism on improving oil recovery through nano-particle injection – experimental study

The study of effect of nano basic Alumina as a catalyst in preparation of Semicarbazones

The study of iron carbonate scale tendency during water injection in siri oilfield at different temperatures

The study of non-linear isotherms for cobalt adsorption
112 Plasma-ultrasound assisted synthesis and physicochemical characterization of PT/AL2O3-CEO2 nanocatalyst used for toluene abatement from waste gas streams at low temperature

119 Prediction of Carbon dioxide Hydrate Phase Equilibria in the presence of inhibitor Using Neuro-Fuzzy

124 Prediction of gas hydrate phase behavior With PRSV2 equation of state

130 Prediction of rotational torque in horizontal drilling using Adaptive nero fuzzy interference system (ANFIS)

135 Presentation of Novel Tube to Enhance Crude Oil Fouling in Heat Exchangers

140 Reduction of Greenhouse Gases Emission and Effect on Environment

147 Relative permeability, capillary pressure and usbm wettability index determination in a highly asphaltenic oil reservoir

153 Adsorption of Hazardous Petroleum Constituents by Ordinary and Modified Bentonites

161 Repair Welding of Corroded Soft-Martensitic duplex Stainless Steel (GX4CrNi13-4)

167 Role of Compositional Grading in a CO2 Injection Project; A Case Study

173 Prediction of solubility of CO2 in an ionic liquid with pr eos paired with wong-sandler mixing rule in super critical

177 Sanding Potential Evaluation Based on a New True-Triaxial Failure Criterion

185 Screening of effective factors on gelation time of hydrogels

193 Simulation of Heat Integrated Distillation Column (HIDiC) for Methanol-Water Separation

201 Simulation of PSA unit of JAM petrochemical company to obtain an optimum time for sub cycle of adsorption in order to reduction of pollution load of adsorbents

211 Simulation Run Time Reduction using Model Order Reduction Techniques

219 Simulation study of effect of fracture parameters on performance of vapex process

227 Soft-Computation with Virtual Intelligence and Genetic Algorithms to Optimize Drilling Bit Selection

235 An Analysis of Polyethylene Coating Corrosion in Oil and Gas Pipelines
Thermal Optimization Analysis of Crude Preheat Network: A Case Study of Shiraz Refinery

Thermodynamic and NMR studies of new kind of hetero atom nanotubes using by Electron Paramagnetic Resonance (EPR)

Thermodynamic study of chromium (VI) sorption on to brown algae

Three Dimensional Modeling for Wellbore Stability Analysis and General Behavior of Oil Wells

An Investigation about of Asphaltene Adsorption Extracted from Brazilian Southern Oil Fields onto Different Minerals Surfaces-Comparative Study of Linearized and Non-Linearized

Ultrasound assisted synthesis of PT/AL2O3-CEO2 nano catalyst for total oxidation of toluene used in waste gas stream treatment

Ultrasound-Assisted Oxidative Desulfurization Process of Gas Oil

Unstructured grid generation in fractured reservoir media

Use of Copper Oxide in water Nano fluid as drilling mud for HPHT (high pressure and high temperature) wells

Use of Ensemble Kalman Filter (EnKF) in reservoir history matching problems: an overview on synthetic and real filed cases

Use of Nitrogen Injection in EOR Techniques

Utilization of fmea technique in refinery facilities: an illustrative example of prioritizing high-risk malfunctions in Refinery towers

Water Injection Process Monitoring in Injection Wells and It’s effect on the Production Wells

Wave propagation in ruptured pipelines and gas Release rate from ruptured areas

An Investigation Into Formation Damage Decreasing By The Promising Solution Of Using Nano-Based Drilling Fluids

An investigation into the effect of phosphate salts as a retarder for oil well cement slurry setting
An Investigation Into The Thermodynamic properties of the water- ammonia – helium mixture

Analysis of safe mud weight window in vertical wells using field data

A novel methodology for fracture extraction from borehole image logs

Applicability of general gilbert type correlation for iranian gas condensate wells

Application analysis of Gas Turbine being exercised under various fuels Case study

Application of a neural network in well testing

Application of Nanotechnology in Human Life

Applications of chitosan composites for heavy metals removal from water and wastewater, a review

Apply Navier-Stokes Equation in Naturally Fractured Reservoirs

Applying non-thermal plasma to NI/AL2O3 and NI/AL2O3-MGO nanocatalyst synthesis used for syngas production from CH4/CO2

Barite sag measurement and management with new setup and new Formulation drilling fluid

Biodegradation of Gachsaran crude oil under extreme environmental conditions by an efficient microbial consortium

Calculate approximately Drainage-Area Static Pressure and Skin Factor
