CONTENTS

Preface ................................................................. xiii

Materials Research Society Symposium Proceedings ............... xv

PHOTOVOLTAIC TECHNOLOGIES

Comparison of Multi-crystalline Silicon PV Modules’ Performance Under Augmented Solar Irradiation ........................................... 3
   Yang Hu, Dave Hollingshead, Mohammad A. Hossain, Mark Schuetz, and Roger French

* Ceramic IR Emitter with Spectral Match to GaSb PV Cells for TPV ...................................................... 11
   Lewis M. Fraas and Kuanrong Qiu

Nanostructured Transparent Conductive Oxides for Photovoltaic Applications ..................................................... 23
   Roger E. Welser, Adam W. Sood, Jaehee Cho, E. Fred Schubert, Jennifer L. Harvey, Nibir K. Dhar, and Ashok K. Sood

CONCENTRATED PHOTOVOLTAICS (CPV)

High Efficiency Solar to Electric Energy Conversion through Spectrum Splitting and Multi-channel Full Spectrum Harvesting ............... 31
   Lirong Zeng Broderick, Tiejun Zhang, Marco Stefancich, Brian R. Albert, Evelyn Wang, Gang Chen, Peter Armstrong, Matteo Chiesa, Lionel Kimerling, and Jurgen Michel

* Realizing the World’s First Upgradeable, 40-year Lifetime High Concentration Photovoltaic (HCPV) System—An Accelerated Pathway to Grid Parity ..................................................... 37
   Hojun Yoon, Sameet Nabar, and Yoav Banin

*Invited Paper
NEXT GENERATION SOLAR CELLS

Exfoliated ~25μm Si Foil for Solar Cells with Improved Light-trapping ...............................................................51
S. Saha, E.U. Onyegam, D. Sarkar, M.M. Hilali, R.A. Rao,
L. Mathew, D. Jawarani, D. Xu, R.S. Smith, U.K. Das,
J.G. Fossum, and S.K. Banerjee

Optical Properties and Limits of a Large-area Periodic Nanophotonic Light Trapping Design for Polycrystalline Silicon Thin Film Solar Cells .................................................59
Daniel Lockau, Tobias Sontheimer, Veit Preidel,
Christiane Becker, Florian Ruske, Frank Schmidt,
and Bernd Rech

Point Focus Solar Spectral Splitting System for CPV Applications ....65
Ahmed Zayan, Matteo Chiesa, and Marco Stefancich

Application of Quantum Dots to Solar Cells to Increase Efficiency ...71
Chris Botros and Richard Savage

Photoluminescent Effects on the Temperature Coefficient of Multi-junction Solar Cells ........................................77
Alaeddine Mokri and Mahieddine Emziane

Study of the Electrical Behavior in Intermediate Band-Si Junctions .................................................................85
D. Pastor, J. Olea, A. del Prado, E. Garcia-Hemme,
R. García-Hernansanz, L. González-Pariente, I. Mártil,
and G. González-Díaz

Quantum-kinetic Theory of Defect-mediated Recombination in Nanostructure-based Photovoltaic Devices ..................91
Urs Aeberhard

OPV AND NEXT GENERATION SOLAR CELLS

Transparent Platinum Counter Electrode for Building Integrated Dye-sensitized Solar Cells ..................................................99
Anastasiia Iefanova, Mahdi Farrokh Baroughi,
Daren Davoux, Umesh Gautam, Dilip Dachhepati,
and Jeevan Nepal
Ion Implanted Dielectric Films for an Improved Optical and Electronic Silicon Photovoltaic Response ................................................. 105
Avi Shalav, Christian Henderson, Tom Ratcliff, and Andrew Thomson

Multilayer Hybrid Structure of ZnO Nanorod Arrays Imbedded in TiO2 Network as Photoanode ................................................. 111
Chan-yan Huang, Yan Sun, Xin Chen, and Ning Dai

Passivation, Separation and Characterization of Plasma Synthesized Silicon Nanoparticles ...................................................... 117

TiO2 Film Morphology, Electron Transport and Electron Lifetime in Ultra-fast Sintered Dye-sensitized Solar Cells .......................... 121
Matthew J. Carnie, Cecile Charbonneau, Matthew Davies, Ian Mabbett, Trystan Watson, and David Worsley

Comparisons of the Mechanical Behaviors of Poly (3, 4-ethylenedioxythiophene) (PEDOT) and ITO on Flexible Substrates ......................... 127
Khalid Alzoubi, Gihoon Choi, Mohammad M. Hamasha, Atif S. Alkhazali, John DeFranco, Susan Lu, Bahgat Sammakia, and Charles Westgate

The Effect of the Dielectric Constant of a Solution of CdSe Quantum Dots on Electrophoretic Deposition of the Dots .......................... 133
Nathanael J. Smith

Photovoltaic Properties of Multi Walled Carbon Nanotubes - Poly(3-octathiophene) Conducting Polymer Blends Structures ............. 139
Punya A. Basnayaka, Pedro Villalba, Manoj K. Ram, Lee Stefanakos, and Ashok Kumar

THIN FILM SOLAR CELLS

The Effect of Annealing Treatments on Close Spaced Sublimated Cadmium Telluride Thin Film Solar Cells ........................................ 147
Realistic Simulation of Polycrystalline CIGS Absorbers and Experimental Verification ........................................... 153
C. Maragliano, M. Stefancich, S. Rampino, and L. Colace

Temperature Dependence of Electrical Characterization in n* - CdS/ p - CdTe Thin Film Solar Cells – Study of Shallow/Deep Defects ................................................................. 161
Poonam Rani Kharangarh, George E. Georgiou, and Ken K. Chin

Quasicrystalline Phase of Silicon on Glass ........................................ 169
A.R. Middya and Kartik Ghosh

Development of Indium-rich InGaN Epilayers for Integrated Tandem Solar Cells ..................................................... 175

SILICON AND THIN FILM SOLAR CELLS

Structural and Electro-optical Properties of CdTe Films Used in CdTe/CdS Solar Cells Grown with Substrate Configuration .......... 183

Epitaxial Growth of (010)-oriented β-FeSi₂ Film on Si(110) Substrate. . . 189
Kensuke Akiyama, Hiroshi Funakubo, and Masaru Itakura

Quantitative Defect Analysis on Solar Cells by Laser Beam Induced Current (LBIC) Measurements and 3D Network Simulations .......... 195
Minh Nguyen, Andreas Schütt, Jürgen Carstensen, and Helmut Föll

Microstructure and Local Charge Distribution in Hydrogenated Nanocrystalline Silicon under Illumination Studied by Electrostatic Force Microscopy ........................................... 201
Rubana Bahar Priti and Venkat Bommisetty

Laser Scribing of W-textured ZnO Substrates Using Green Laser ....................................................................... 207
Ryousuke Ishikawa, Hidetoshi Wada, Yasuyoshi Kurokawa, Porpont Sichanugrist, and Makoto Konagai
Growth of SnS van der Waals Epitaxies on Layered Substrates .......................... 213
S.F. Wang, W.K. Fong, W. Wang, K.K. Leung, and C. Surya

Triple-junction Thin-film Silicon Solar Cells on W-textured ZnO
for Applications to Low-concentration Photovoltaics ................................. 219
Shunsuke Kasashima, Yuki Moriya, Porpont Sichanugrist, and Makoto Konagai

Development of Selenization/Sulfurization Process for
High Quality Cu(In, Ga)(S, Se)₂ Solar Cells on
High Strain Point Glass Substrates .................................................. 225
Takeshi Tomizawa, Reo Usui, Takeshi Okato, and Hidefumi Odaka

Production of Silicon by Solid Oxide Membrane-based
Electrolysis Process ................................................................. 231
Yihong Jiang, JiaPeng Xu, Xiaofei Guan, Uday B. Pal, and Soumendra N. Basu

Effect of Cation Sublattice Ordering on Structure and
Raman Scattering of ZnGeN₂ .................................................. 237
Eric Blanton, Keliang He, Jie Shan, and Kathleen Kash

HIGH EFFICIENCY SOLAR CELLS

Carrier Dynamics and Defects in Bulk 1eV InGaAsNSb
Materials and InGaAs Layers with MBL Grown by MOVPE
for Multi-junction Solar Cells .................................................. 245

Junction Operation of GaAs Wire Array Solar Cells ......................... 253
Adam F. Halverson and Loucas Tsakalakos

SOLAR CELL PHYSICS

Electrogenerated Chemiluminescence and Fluorescence
Lifetime Spatial Heterogeneity of Poly (2-methoxy-5-
(2-ethylhexyloxy)-1,4-phenylenevinylene) in Presence of
[6,6]-phenyl-C₆₁-butyric Acid Methyl Ester .................................. 263
Hongwei Geng, Shanlin Pan, and Dehong Hu
Temperature Dependent Behavior of Flat and Bulk Heterojunction Organic Solar Cells ........................................... 269
Johannes Widmer, Karl Leo, and Moritz Riede

Influence of the Cyanine Counter Anions on a Bi-layer Solar Cell Performance .................................................. 275
Olga Malinkiewicz, Thais Grancha, Martijn Lenes, Hicham Brine, Alejandra Soriano, and Henk J. Bolink

Optical Band-gap of TiO₂ Nanopowders Doped with Al₂O₃......... 281
Keisuke Yoshimura, Tetsuya Hashimoto, and Hiroshi Katsumata

Effect of Air Exposure of MoO₃ Film Underneath Thin CuPc Layers ......................................................... 287
Chenggong Wang, Irfan Irfan, and Yongli Gao

CHARACTERIZATION

New Experimental Method to Precisely Examine the LUMO Levels of Organic Semiconductors and Application to the Fullerene Derivatives .............................................. 295
Hiroyuki Yoshida

Intensity-modulated Photovoltage Spectroscopy at Evaporated Bulk Heterojunctions of PcCu and C₆₀ to Determine the Average Effective Lifetime of Charge Carriers .......... 303
André Dragässer and Derck Schlettwein

Efficient Analysis of Single Molecule Spectroscopic Data via MATLAB ............................................................... 309
Caleb M. Hill and Shanlin Pan

ADVANCED CONCEPTS

Geometric Light Trapping in 2D and 3D Structured Small Molecule Organic Solar Cells ..................................... 317
Marcos Soldera, Emiliano Estrada, and Kurt Taretto
