Bin Zhou

Truncated Predictor Feedback for Time-Delay Systems

Springer
## Contents

1 **Introduction** ....................................................... 1
   1.1 Time-Delay Systems ........................................... 1
       1.1.1 Stability Analysis of Time-Delay Systems .......... 2
       1.1.2 Stabilization of Time-Delay Systems ............... 3
   1.2 Time-Delay Systems with Input Saturation ............... 5
       1.2.1 Control Systems with Input Saturation .......... 5
       1.2.2 Systems with Both Input Delays and Saturations 6
   1.3 Objectives of This Book .................................... 7

2 **Stabilization of Linear Systems with a Single Input Delay** ....... 9
   2.1 Problem Formulation ........................................ 10
   2.2 Stabilization by the Delay-Dependent TPF .............. 11
       2.2.1 Derivation of the Delay-Dependent TPF .......... 11
       2.2.2 Assumptions on \((A(t), B(t))\) .................... 15
       2.2.3 Stability Analysis of the Closed-Loop System ... 17
       2.2.4 Semi-global Stabilization by TPF ................. 23
       2.2.5 Parameter Optimization in the TPF ............... 25
   2.3 Stabilization by Delay-Independent TPF ................ 29
       2.3.1 Design of Delay-Independent TPF ................. 29
       2.3.2 Stability of the Closed-Loop System .......... 30
       2.3.3 Semi-global Stabilization ....................... 32
   2.4 Numerical Examples ....................................... 34
       2.4.1 Delay-Dependent TPF ................................ 34
       2.4.2 Delay-Independent TPF ............................ 39
   2.5 Concluding Remarks ....................................... 40

3 **Stabilization of Linear Systems with Multiple and Distributed Input Delays** .................................... 45
   3.1 Systems with Multiple Input Delays .................... 46
       3.1.1 Problem Formulation .............................. 46
       3.1.2 Derivation of the TPF ............................ 47
       3.1.3 Stability of the Closed-Loop System Under the TPF . 51
       3.1.4 Different TPF Designed for a Single Input Delay . 57

6 Global Stabilization of Planar Systems with Input Delay and Saturation .................................................. 147
6.1 The Double Integrator System: Delay-Dependent TPF ................................. 147
   6.1.1 The Main Theorem .............................................................................. 148
   6.1.2 Proof of Theorem 6.1 ......................................................................... 149
6.2 The Double Integrator System: Delay-Independent TPF .............................. 159
   6.2.1 The Main Theorem .............................................................................. 159
   6.2.2 Proof of Theorem 6.2 ......................................................................... 160
6.3 The Single Oscillator System ....................................................................... 168
   6.3.1 The Main Theorem .............................................................................. 168
   6.3.2 Proof of Theorem 6.3 ......................................................................... 170
6.4 A Numerical Example .................................................................................. 175
6.5 Conclusions ................................................................................................. 177

7 Stabilization of Linear Time-Delay Systems by Higher-Order TPF .................. 179
7.1 Problem Formulation and Preliminaries ..................................................... 180
7.2 The Higher-Order TPF .............................................................................. 180
7.3 Stability Analysis of the Closed-Loop System ............................................ 183
   7.3.1 Global Stabilization .............................................................................. 183
   7.3.2 Semi-global Stabilization ..................................................................... 186
   7.3.3 Exact Bound of the Parameter $\gamma$ ..................................................... 188
7.4 Implementation via Approximation ............................................................. 192
7.5 First-Order TPF Versus Higher-Order TPF ............................................... 195
7.6 Concluding Remarks .................................................................................. 198

8 Stabilization of Discrete-Time Systems with Input Delays ......................... 199
8.1 Problem Formulation .................................................................................. 200
8.2 A Single Delay: Stabilization by Delay-Dependent TPF .............................. 201
   8.2.1 Design of the Delay-Dependent TPF .................................................. 201
   8.2.2 Stability Analysis of the Closed-Loop System .................................... 204
   8.2.3 Semi-global Stabilization ..................................................................... 209
8.3 A Single Delay: Stabilization by Delay-Independent TPF ......................... 211
   8.3.1 Design of the Delay-Independent TPF ................................................ 211
   8.3.2 Stability of the Closed-Loop System .................................................... 213
8.4 Systems with Multiple Input Delays ............................................................ 218
   8.4.1 Design of the TPF .............................................................................. 218
   8.4.2 Stability of the Closed-Loop System .................................................... 221
   8.4.3 Semi-global Stabilization by the TPF .................................................. 226
8.5 Determination of the Parameter $\gamma$ ......................................................... 228
8.6 Numerical Examples .................................................................................. 229
   8.6.1 System with a Single Input Delay ...................................................... 229
   8.6.2 Systems with Multiple Input Delays .................................................... 232
8.7 Conclusions ............................................................................................... 234
9 Stabilization of Discrete-Time Systems with Input and Output Delays .................................................. 237
  9.1 Problem Formulation and Preliminaries ..................................... 237
  9.1.1 Problem Formulation ................................................. 237
  9.1.2 Observer Design by the Predictor Feedback .......................... 239
  9.2 Memory Observer-Based Output Feedback ............................. 242
  9.2.1 Multiple Output Delays ............................................ 243
  9.2.2 A Single Output Delay ............................................. 244
  9.2.3 Determination of the Design Parameters .......................... 247
  9.3 Memoryless Observer-Based Output Feedback ......................... 248
  9.3.1 Observer Design by the TPF ....................................... 248
  9.3.2 Stability Analysis: The Full-Order Case .......................... 249
  9.3.3 Stability Analysis: The Reduced-Order Case ....................... 253
  9.3.4 Semi-global Stabilization ....................................... 261
  9.4 A Numerical Example .................................................. 265
  9.5 Conclusions .................................................................. 272

10 Consensus of Multi-agent Systems with Large Input and Communication Delays .............................................. 273
  10.1 Problem Formulation and Preliminaries ............................. 274
    10.1.1 Introduction on Graphs and Some Special Notations .............. 274
    10.1.2 Problem Formulation ............................................. 276
    10.1.3 Some Assumptions ................................................ 278
    10.1.4 A Reduction of the Consensus Problem .......................... 279
    10.1.5 Stability of Coupled Time-Delay Systems ....................... 281
  10.2 Predictor Feedback Protocols and TPF Protocols ..................... 282
    10.2.1 State Feedback Consensus ....................................... 282
    10.2.2 Full-Order Observer-Based Output Feedback Consensus .......... 288
    10.2.3 Reduced-Order Observer-Based Output Feedback Consensus ....... 292
  10.3 Extensions to the Leader-Following Consensus .................. 297
  10.4 Some Corollaries in the Delay-Free Case ............................ 299
  10.5 Two Numerical Examples .............................................. 301
    10.5.1 Constant Input Delay ............................................ 302
    10.5.2 Time-Varying Input Delay ...................................... 306
  10.6 Proofs of Lemmas 10.2 and 10.3 .................................... 308
    10.6.1 Proof of Lemma 10.2: The Continuous-Time Case ............... 310
    10.6.2 Proof of Lemma 10.3: The Continuous-Time Case ............... 313
    10.6.3 Proof of Lemma 10.2: The Discrete-Time Case ................ 317
    10.6.4 Proof of Lemma 10.3: The Discrete-Time Case ................ 322
  10.7 Concluding Remarks .................................................. 325

11 Applications of the Truncated Predictor Feedback to the Spacecraft Rendezvous and Formation Flying ...................... 327
  11.1 The Relative Motion and Its Properties ............................ 328
    11.1.1 T-H Equations and C-W Equations ............................... 328
